Academic Policies - Academic Credit and Limitations

Academic Policies

Academic Credit and Limitations

Since the fall semester 1983, academic/artistic credit for work completed at CalArts has been awarded in terms of semester units. CalArts adheres to the standard definition of “semester unit” as described by the Western Association of Schools and Colleges. For undergraduate students, one semester unit is assigned on the basis of 3 hours of work each week of a semester with a semester considered to be 15 weeks for a total of 30 weeks of instruction. Using this formula, 45 hours of study in one semester is equal to one semester unit.

Examples of the ways in which one undergraduate semester unit may be earned are as follows:

- Lecture Course: One contact hour plus two hours of out of class preparation.
- Studio Course: Two contact hours plus one hour of out of class preparation.
- Individual Lessons: One hour of contact with at least two hours of practice.
- Independent Study: At least three hours of work per week.

For students pursuing an MFA degree, MA degree, Advanced Certificate, or DMA degree, one semester unit is assigned on the basis of 4 hours of work each week of a semester with a semester considered to be 15 weeks for a total of 30 weeks of instruction. Using this formula, 60 hours of study in one semester is equal to one semester unit. More out-of-class preparation time is generally expected at the graduate level than at the undergraduate level.

The number of units established for any one class is based on minimum expectations. Quality is recognized by the awarding, not of units, but of grades (high pass, pass, low pass, etc.).

A full-time undergraduate student program is normally 14 to 16 units and not less than 12 units. At CalArts, a full-time MFA, MA or Advanced Certificate of Fine Arts student program is not less than 9 or 12 units depending on the program of study. A full-time DMA student program comprises not less than 10 units.

A 14 to 16 unit course load requires at least 42 to 48 hours of class related work per week while a 20 unit course load would require at least 60 hours of course related work per week. Considering this commitment of time, energy and resources, we limit student course loads to no more than 20 units per semester (excluding any Winter Session units).

We recognize that on occasion, a student may wish to exceed the 20 units per semester limitation due to unusual circumstances. In that case, the student will complete the Unit Overload Petition, which must be approved and signed in the following order by:

- the student's mentor;
- the dean of the student's School;
- the Provost or his/her designee; and
- the Registrar.

Only students who have not received an NC grade in the two semesters preceding the petition are eligible to request a unit overload. BFA-1 students may not petition for more than 20 units (excluding any Winter Session units).

Note: Financial aid is calculated on the minimum full-time course load (12 units for undergraduate students / nine units for graduate students). Units beyond the prescribed minimum are not calculated for additional financial aid.

Academic Policies - Academic Misconduct

Academic Policies

Academic Misconduct

Discipline may be imposed for all forms of academic misconduct (including but not limited to, cheating, fabrication and plagiarism) and facilitating such misconduct. Forgery, authorized alteration or unauthorized use of any official CalArts document, record or instrument of identification.

Procedures for Handling Misconduct Cases

All cases of academic misconduct shall be referred to the Associate Provost or designee, who in consultation with the appropriate School Dean, shall determine which disciplinary sanctions, if any shall be imposed. The sanctions of suspension or dismissal shall not be imposed unless the Provost concurs.

Consequences

When a student is found to have engaged in academic misconduct, any of the following types of actions may be imposed. Any action imposed should be appropriate to the violation, taking into consideration the context and seriousness of the violation and the past record of the student.

Warning

Written notice to the student that a violation of academic conduct has occurred and that continued or repeated violations may be cause for further disciplinary action, normally in the form of disciplinary probation, loss of privileges, and exclusion from activities, suspension, or dismissal.

Probation

A status imposed for a specific period of time in which a student must demonstrate conduct that conforms to CalArts academic standards. Conditions restricting the student's privileges or eligibility for activities may be imposed. Misconduct during the probationary period or violation of any conditions of the probation may result in further disciplinary action, normally in the form of suspension or dismissal.

Loss of Privileges and Exclusion from Activities

Exclusion from participation in designated privileges and/or activities for a specified period of time. Failure to adhere to the limitations imposed on privileges in activities or violation of academic conduct during the period of the sanction may be cause for further disciplinary action, normally in the form of suspension or dismissal.

Suspension

Termination of student status at CalArts for a specified academic term or terms with reinstatement thereafter certain, provided that the student has complied with any conditions imposed as part of the suspension. Violation of the conditions of suspension may be cause for further disciplinary action, normally in the form of dismissal.

Dismissal

Termination of student status for an indefinite period. Readmission to CalArts shall require the specific approval of the student's School Dean and the Provost. Readmission after dismissal may be granted only under exceptional circumstances.

Appeal Process for Academic Misconduct Sanctions

The student may appeal an academic misconduct sanction. To do so, the student must submit, in writing, a notice of appeal to the Provost. The notice of appeal should provide a brief statement of the basis for the appeal and must be submitted within ten calendar days of the date on which the sanction is imposed.

Upon receipt of a notice of appeal, an Appeals Committee shall be formed as soon as is practical. Persons eligible to serve on the Appeals Committee shall be current members of the faculty, staff and student body. One member of the Appeals Committee shall be appointed by the Associate Provost or designee, one by the VP for Student Experience, and one member by the student. Together, these members of the Appeals Committee shall decide who from among them shall serve as chairperson. No person shall participate as a member of the Appeals Committee who has been involved in the events upon which the sanction has been imposed or who is biased.

Within ten calendar days of the date of Appeals Committee is formed, or as soon thereafter as practical, the Appeals Committee shall meet in closed session to consider the appeal. The members of the Appeals Committee shall respect the confidentiality of the proceedings. The student and the CalArts official(s) who imposed/recommended the disciplinary sanctions shall be provided with an opportunity to meet with the Appeals Committee, but shall otherwise be present at a meeting of the Appeals Committee only at the request or with the permission of the Appeals Committee. As it deems appropriate, the Appeals Committee shall interview other persons and shall consider written materials and other items pertinent to the appeal. When the student appears before the Appeals Committee, they may be accompanied and advised by any current member of the CalArts community, (i.e. student, staff member, or faculty member) who is not an attorney, but such person may not address the Appeals Committee unless requested by it to do so.

At the completion of its review, the Appeals Committee shall prepare a written advisory report consisting of the findings, conclusions and recommendations, and shall submit it to the Provost. A determination by the Appeals Committee that a student has engaged in academic misconduct shall be made on the basis of whether it is more likely than not that the student engaged in such conduct. Copies of the report should also be furnished to the student and the CalArts official(s) who imposed/recommended the sanctions. Under separate cover, the Appeals Committee shall also forward to the Provost copies of any written material or items that it considered in connection with the appeal process.

The Provost or designee shall consider the report and at their discretion take whatever action they deem appropriate. Prior to taking such action, the Provost or designee may discuss the report with members of the Appeals Committee, the student or any other person. The Provost or designee shall transmit their decision in writing to the student, the CalArts official(s) who imposed/recommended the disciplinary sanctions, and the members of the Appeals Committee. The decision of the Provost shall be final.

Academic Policies - Academic and Metier Progress Policy

Academic Policies

Academic and Metier Progress Policy

Undergraduate / BFA Students

BFA students' academic and metier progress will be reviewed each semester by their mentor, program director, and/or dean, in partnership with the Offices of the Registrar and Academic Advising. Unsatisfactory progress will result in Warning 1. Continued unsatisfactory progress may result in Warning 2, Suspension, and Dismissal from the Institute.

Acceptable progress toward an undergraduate degree consists of passing at least two-thirds (66.67%) of units attempted each semester and passing all relevant level 100 Critical Studies requirements. It may also require passing all metier requirements and meeting program expectations concerning attendance and engagement, as per practices in the relevant metier. For the purpose of calculating acceptable progress, incomplete grades and withdrawals will be treated as no credit. After grades are submitted each semester, a student's progress will be processed by the Office of the Registrar. Students with unsatisfactory progress will be notified regarding changes to their standing, expectations for improvement, and any restrictions on course choice, unit load, and co-curricular activities.

Categories of Academic & Metier Standing

Acceptable Standing

A student is making acceptable progress toward an undergraduate degree by passing two-thirds of units attempted each semester and passing all relevant level 100 Critical Studies requirements. They may also be required to pass all metier requirements and meet program expectations concerning attendance and engagement.

Warning 1

If a student does not meet the requirements for acceptable standing, they will be placed on Warning 1 for the following semester. Students on Warning 1 may be limited to enrolling in a maximum of 15 units and may be required to enroll in a specified number of Critical Studies or metier units. Students on Warning 1 are required to meet with their mentor, program director, and/or academic advisor during their semester of Warning 1. If a student on Warning 1 meets the requirements for acceptable standing, they will be returned to acceptable standing.

Warning 2

If a student on Warning 1 does not meet the requirements for acceptable standing, they will be placed on Warning 2 for the following semester. Students on Warning 2 are limited to enrolling in a maximum of 15 units and may be required to enroll in a specified number of Critical Studies or metier units. Students on Warning 2 may be advised to catch up on units by taking summer courses. Students on Warning 2 may not participate in study abroad or internship programs. Students on Warning 2 are required to meet with their mentor, program director, and/or academic advisor twice during their semester of notice. If a student on Warning 2 meets the requirements for acceptable standing, they will be returned to acceptable standing.

Suspension

If a student on Warning 2 does not meet the requirements for acceptable standing, they will be suspended from the Institute for the following semester. Upon return from suspension, a student will be placed on Warning 2.

Dismissal

If, upon return from suspension, a student does not meet the requirements for acceptable standing, they will be dismissed from the Institute.

Appeals

Students may appeal an academic standing suspension or dismissal. To appeal, a student must submit a petition stating the grounds for appeal to the Registrar within one week of the date of the notice of suspension or dismissal. Students may contact the Student Advocate in the Office of Student Affairs (studentaffairs@calarts.edu) for information and support during the appeal process. If a student's appeal is granted, they will be placed on Warning 2 and informed of requirements for continued enrollment, such as expectations for improvement, required meetings, and any restrictions on course choice, unit load, and co-curricular activities. If at the end of the semester, the student has not met all the requirements for continued enrollment, they will be dismissed from the Institute. Additional information about the Appeal Policy is available [here](#).

Recommended Rate of Progression

It is possible for a student to maintain "acceptable standing" but not be progressing through their degree requirements at a rate sufficient to graduate in 4 years. Students must complete an average of 15 units per semester to meet the total units required to graduate in 4 years. Students must enroll in at least 12 units per semester to maintain full-time status. Students must take at least 46 Critical Studies units to graduate.

Year Level	Semester	Recommended Critical Studies units	Recommended metier and elective units	Total
BFA1	1	5	10	15
	2	5	10	15
BFA2	1	6	9	15
	2	6	9	15
BFA3	1	6	9	15
	2	6	9	15
BFA4	1	6	9	15
	2	6	9	15
Total		46	74	120

Letter of Concern

At any point in the semester, a school or program may opt to issue a letter of concern to students who are at risk of failing one or more courses. Reasons for issuing a letter of concern may include:

- Absences and/or tardiness (arriving late to class)
- Missing assignments or exams
- Class participation or engagement concerns
- Overall class performance
- Referrals to campus resources

The letter will list the reason(s) for the concern and consequences of not resolving the concern, and may require students to meet with their mentor, program director, dean, or academic advisor for assistance.

Graduate Students / MFA, MA

MFA and MA students' progress will be reviewed each semester by their mentor, program director, and/or dean, in partnership with the Office of the Registrar. Acceptable progress consists of passing at least two-thirds (66.67%) of units attempted each semester. It may also require passing all metier requirements and meeting program expectations concerning attendance and engagement, as per practices in the relevant metier. Unsatisfactory progress will result in Warning. Continued unsatisfactory progress may result in suspension and dismissal from the Institute.

For the purpose of calculating acceptable progress, incomplete grades and withdrawals will be treated as no credit. After grades are submitted each semester, a student's progress will be processed by the Office of the Registrar. Students with unsatisfactory progress will be notified regarding changes to their standing, expectations for improvement, and any restrictions on course choice, unit load, and co-curricular activities.

Categories of Academic Standing

Acceptable Standing

A student is making acceptable progress toward an MFA or MA degree by passing two-thirds of units attempted each semester. They may also be required to pass all metier requirements and meet program expectations concerning attendance and engagement.

Warning

If a student does not meet the requirements for acceptable standing, they will be placed on Warning for the following semester. Students on Warning are required to meet with their mentor, program director, and/or dean twice during their semester of Warning. If a student on Warning meets the requirements for acceptable standing, they will be returned to acceptable standing.

Suspension

If a student on Warning does not meet the requirements for acceptable standing, they will be suspended from the Institute for the following semester. Upon return from suspension, a student will be placed on Warning.

Dismissal

If, upon return from suspension, a student does not meet the requirements for acceptable standing, they will be dismissed from the Institute.

Appeals

Students may appeal an academic standing suspension or dismissal. To appeal, a student must submit a petition stating the grounds for appeal to the Registrar within one week of the date of the notice of suspension or dismissal. Students may contact the Student Advocate in the Office of Student Affairs (studentaffairs@calarts.edu) for information and support during the appeal process. If the student's appeal is granted, they will be placed on Warning and informed of requirements for continued enrollment, such as expectations for improvement, required meetings, and any restrictions on course choice, unit load, and co-curricular activities. If at the end of the semester, the student has not met all the requirements for continued enrollment, they will be dismissed from the Institute. Additional information about the Appeal Policy is available [here](#).

Recommended Rate of Progression

It is possible for a student to maintain “acceptable standing” but not be progressing through their degree requirements at a rate sufficient to graduate in the prescribed program length.

Degree Type	Prescribed Program Length	Recommended units completed per semester
MFA (2 year)	2 years	15
MFA (3 year)	3 years	10
MA	2 years	12 (Year 1) 6 (Year 2)

Letter of Concern

At any point in the semester, a school or program may opt to issue a letter of concern to students who are at risk of failing one or more courses. Reasons for issuing a letter of concern may include:

- Absences and/or tardiness (arriving late to class)
- Missing assignments or exams
- Class participation concerns
- Overall class performance
- Referrals to campus resources

The letter will list the reason(s) for the concern and consequences of not resolving the concern, and may require students to meet with their mentor, program director, or dean for assistance.

Graduate Students / Doctor of Musical Arts

DMA students' progress will be reviewed each semester by their mentor, program director, and/or dean, in partnership with the Office of the Registrar. Acceptable academic progress consists of passing at least two-thirds (66.67%) of units attempted each semester. It may also require passing all metier requirements and meeting program expectations concerning attendance and engagement, as per practices in the relevant metier. Unsatisfactory progress will result in Warning. Continued unsatisfactory progress may result in dismissal from the Institute.

For the purpose of calculating acceptable progress, incomplete grades and withdrawals will be treated as no credit. After grades are submitted each semester, a student's progress will be processed by the Office of the Registrar. Students with unsatisfactory progress will be notified regarding changes to their standing, expectations for improvement, and any restrictions on course choice, unit load, and co-curricular activities.

Categories of Academic Standing*Acceptable Standing*

A student is making acceptable progress toward a DMA degree by passing two-thirds of units attempted each semester. They may also be required to pass all metier requirements and meet program expectations concerning attendance and engagement.

Warning

If a student does not meet the requirements for acceptable standing, they will be placed on Warning for the following semester. Students on Warning are required to meet with their mentor, program director, and/or dean twice during their semester of Warning. If a student on Warning meets the requirements for acceptable standing, they will be returned to acceptable standing.

Dismissal

If a student on Warning does not meet the requirements for acceptable standing, they will be dismissed from the Institute.

Appeals

Students may appeal an academic standing dismissal. To appeal, a student must submit a petition stating the grounds for appeal to the Registrar within one week of the date of the notice of suspension or dismissal. Students may contact the Student Advocate in the Office of Student Affairs (studentaffairs@calarts.edu) for information and support during the appeal process. If the student's appeal is granted, they will be placed on Warning and informed of requirements for continued enrollment, such as expectations for improvement, required meetings, and any restrictions on course choice, unit load, and co-curricular activities. If at the end of the semester, the student has not met all the requirements for continued enrollment, they will be dismissed from the Institute. Additional information about the Appeal Policy is available [here](#).

Recommended Rate of Progression

It is possible for a student to maintain “acceptable standing” but not be progressing through their degree requirements at a rate sufficient to graduate in 3 years. DMA students must complete an average of 10 units per semester to meet the total units required to graduate in 3 years.

Letter of Concern

At any point in the semester, a school or program may opt to issue a letter of concern to students who are at risk of failing one or more courses. Reasons for issuing a letter of concern may include:

- Absences and/or tardiness (arriving late to class)
- Missing assignments or exams
- Class participation concerns
- Overall class performance
- Referrals to campus resources

The letter will list the reason(s) for the concern and consequences of not resolving the concern, and may require students to meet with their mentor, program director, or dean for assistance.

Certificate of Fine Arts Students and Advanced Certificate of Fine Arts Students

Certificate students' progress will be reviewed each semester by their mentor, faculty, and/or dean. Acceptable progress consists of passing at least two-thirds (66.67%) of classes each semester.

All Students

This is a minimum standard for acceptable progress toward a degree.

Individual schools and metiers may have additional degree requirements (e.g., exhibitions, performances, and reviews) and additional expectations for acceptable progress toward degree completion beyond the Institute-wide standard.

Financial aid regulations require the Institute to ensure that all students who are receiving financial aid maintain Satisfactory Academic Progress (SAP) toward their degree, which includes additional requirements, detailed [here](#).

International students need to be enrolled full time in order to maintain their F-1 visa and immigration status.

Approved in Deans Council: November 12, 2024

Approved in Academic Council: December 5, 2024

Academic Policies - Academic and Metier Standing Appeal Policy

Academic Policies

Academic and Metier Standing Appeal Policy

Academic and Metier Standing Appeal Policy

Students may appeal an academic and metier standing suspension or dismissal. To appeal, students must submit a petition stating the grounds for appeal to the Registrar (registrar@calarts.edu) within one week of the date of the notice of suspension or dismissal. Students may contact the Student Advocate in the Office of Student Affairs (studentaffairs@calarts.edu) for information and support during the appeal process.

Upon receipt of an appeal, the Registrar will convene the Academic Appeals Committee* to review the appeal. The committee's decision should be made within two weeks of receipt of the appeal or as soon thereafter as practical given the circumstances. The decision of the Academic Appeals Committee is final. If the Academic Appeals Committee does not make a decision by its deadline, then the Provost (or designee) will make the final decision.

The Academic Appeals Committee's decision will be sent by email and postal mail to students within one week or as soon thereafter as practical given the circumstances of their decision. Copies of the decision will be sent to the students' mentor, program director, dean, Registrar, Director of Financial Aid, Vice President of Student Affairs, Office of the Provost, and members of the review committee.

If a student's appeal is granted, they will be placed on Warning 2 and informed of requirements for continued enrollment, such as expectations for improvement, required meetings, and any restrictions on course choice, unit load, and co-curricular activities. If, at the end of the semester on Warning 2, the student has not met all the requirements for continued enrollment, they will be dismissed from the Institute.

Student Records

The Institute's internal student records will include all notices of actions taken in accordance with the Academic and Metier Progress policy. However, students' official transcripts will not reflect their standing history if all requirements have been fulfilled and the academic and metier standing has been removed.

Complaint Procedure

An individual may contact the Bureau for Private Postsecondary Education for review of a complaint. The bureau may be contacted at 2535 Capitol Oaks Drive, Suite 400, Sacramento, CA 95833, <http://www.bppe.ca.gov/> [1], Tel: 916.431.6924, Fax: 916.263.1897.

* Academic Appeals Committee - Academic Council Chair (or designee), one Academic Council Representative (or designee), Provost Office representative, Registrar Office representative.

Academic Policies - Accelerated Graduation

Academic Policies

Accelerated Graduation

Accelerated Graduation

Accelerated graduation is an honor conferred, on rare occasions, when a student has demonstrated extraordinary artistic development and achievement.

It is an honor conferred by the faculty and dean of a school; it is not an option for which a student may apply.

Not more than one year's advancement may be granted for an accelerated graduation.

MA in Aesthetics and Politics and DMA students are not eligible for accelerated graduation.

Required Conditions

1. Demonstration by the student of excellence and achievement far beyond that which is required for graduation.
2. Completion by the student of all school requirements and Critical Studies requirements (BFA and Critical Studies programs only).

The Process:

1. The nomination for accelerated graduation must be supported, in writing, by the program head, the dean of the school and at least two faculty members.
2. The recommendation for accelerated graduation must be submitted to the Registrar no later than the last class day of the 3rd week of classes of the semester of anticipated graduation. The recommendation delineates the reasons for an accelerated graduation and describes the student's outstanding accomplishments.
3. The Registrar will forward the recommendation to the Provost or his/her designee who will schedule presentation of the recommendation to the Deans Council.
4. At the time of the presentation to the Deans Council, the Dean of the school will provide the letters of support from the school, as well as evidence of the student's excellence and achievement, such as a resume and/or portfolio.
5. Upon approval of these terms, the student's school will schedule an official graduation review.
6. Final approval for graduation rests with the school.

Academic Policies - Add/Drop

Academic Policies

Add/Drop

Add/Drop is a grace period during which students may sign up for classes, add classes to their schedule or drop classes from their schedule. There is no fee for this service, though students must have registered (paid tuition and completed forms) in order to sign up for classes.

From the end of late registration to the close of the add/drop period, class changes will require the approval of the mentor and the permission of the instructor of the class.

Academic Policies - Admissions Policies

Academic Policies

Admissions Policies

Admission to the Institute

California Institute of the Arts is committed to the principle of equal opportunity. The Institute does not discriminate against individuals on the basis of race, color, sex, sexual orientation, religion, disability, age, veteran status, ancestry, national or ethnic origin, or other characteristics or classifications protected by the law in the administration of its educational policies, admissions policies, employment policies, scholarships and loan programs, and other Institute administered programs and activities, but may favor U.S. citizens or residents in admission and financial aid.

Inquiries concerning CalArts' equal opportunity policies, compliance with applicable laws, statutes and regulations (such as Title VI of the Civil Rights Act, Title IX of the Education Amendments of 1972 and Section 504 of the Rehabilitation Act of 1973), and complaint procedures should be directed to the Dean of Students, Academic Administration Building, Room A207, 661 253-7891. To the extent that such inquiries and complaints pertain to employment-related matters, they should be sent to the Director of Human Resources, Academic Administration Building, Room F201A, 661 253-7837.

The decision to admit students for degrees and certificates is primarily the responsibility of the school faculties and the Office of Admissions acting through procedures established by the faculty, deans and administration, which are consistent with established Institute policies. These procedures place strong emphasis upon the student's potential to benefit from admission to one of the Institute's schools as demonstrated by portfolio, audition and other evidence of achievement and creative ability. Application procedures and portfolio and audition requirements are described on the CalArts website and in other official publications.

Note: International applicants must meet special standards described in this policy and in the Admissions Bulletin. The Admissions Committee may choose to conditionally accept students whose ability to maintain satisfactory progress in our Critical Studies curriculum is in question. Conditionally accepted students will be required to meet with the Institute Academic Advisor twice a year prior to class-sign up. The Institute Academic Advisor will develop an ongoing plan individual to the student's needs which may include tutoring, counseling, or special workshops.

Admission Prerequisite

Undergraduate applicants to the Institute must provide a secondary (high) school transcript from a regionally accredited high school or must be working toward graduation or its equivalent at the time of application. Applicants will also be considered for admission on the basis of testing rather than secondary school graduation under the following circumstances:

1. Upon presentation of an official General Education Development Exam (GED) report with a total score of at least 300 with no individual score below 55; or
2. Upon presentation of a transcript from a regionally accredited college or university verifying at least 24 semester units of transferable college-level course work. The transfer credit must be in academic courses suitable for transfer toward Critical Studies or of a critical or analytic nature based in the student's métier.

Applicants to MFA and MA programs must have earned an undergraduate degree from a regionally accredited college or university. Applicants to the DMA program must have a Master's degree or equivalent in a relevant field from a regionally accredited college or university, or a Master's degree in another field with skills and knowledge demonstrably commensurate with a Master's degree in music.

International Students: Credentials, diplomas and certificates of secondary school and college-level work must be presented in official English translation, with notations as to the numbers of hours attended per week and the total of weeks completed.

High School or Secondary School transcripts verifying graduation, transcripts from all colleges or universities previously attended, and college or university transcripts verifying previous degrees must be received no later than the end of the student's first semester of attendance. Students with transcripts outstanding at the end of the first semester of attendance will not be eligible to enroll for subsequent semesters.

Application Fee

In accord with policies approved by the Board of Trustees and the President, a non-refundable application fee is charged. The amount is set annually and is subject to review by the President.

The Director of Admissions may consider exception for payment of the application fee under special conditions:

1. When a guidance counselor or financial aid officer at the applicant's current school writes a letter on behalf of the applicant providing financial hardship information;
2. When a College Board fee waiver is submitted;
3. When the applicant is a spouse or child of a CalArts faculty or staff member;
4. When the applicant is a former CalArts student;
5. When the applicant has already been accepted and received a deferment of enrollment to the next year, or when the applicant has been placed on an official waiting list and reapplies for the next year.

All exceptions must be in writing. Any applicant who failed to complete the application process, or who was rejected for any academic year, must reapply and pay the non-refundable fee.

Admission Deposit

All students admitted to the Institute are required to submit an enrollment deposit. Deposit deadlines are indicated in the student's offer of admission. This deposit assures the student of a place in school and is applied toward their tuition account when the student registers. The deposit is non-refundable, even if the student does not register. The amount of the deposit is set annually by the President. An additional housing deposit is required for students requesting on-campus housing.

Provisional admission may be granted when:

- The dean and faculty have reservations about a student's preparedness to meet the artistic standards of admission established by the Schools; but the student is seen by them to have the potential which merits an opportunity to develop.
- A student has not completely fulfilled Institute requirements for admission, such as providing transcripts to substantiate high school or previous college work or such as obtaining an acceptable TOEFL or IELTS score.

Provisional Admissions

Provisional admission may be granted when:

- The dean and faculty have reservations about a student's preparedness to meet the artistic standards of admission established by the Schools; but the student is seen by them to have the potential which merits an opportunity to develop.
- A student has not completely fulfilled Institute requirements for admission, such as providing transcripts to substantiate high school or previous college work or such as obtaining an acceptable TOEFL or IELTS score.

Whenever provisional admission is granted

The student will receive written notification that admission is provisional, the reasons for that status, what is required to gain admission to regular good standing, the time allowed to fulfill those requirements, and the consequences of not meeting them.

When provisional admission relates to an artistic/academic decision made within one of the Schools

- BFA students must complete the requirements for termination of the provisional status within the first two semesters of residence; MFA students must comply within the first semester of residence.
- A regular review of the student's work will be held within the BFA student's second semester of residence or the MFA student's first semester of residence. The review will be conducted by the mentor with a regular review committee. A decision shall be made either to terminate the provisional status and grant regular enrollment status, or to terminate the student's enrollment at CalArts.
- A written report of the decision of the review committee will be prepared and sent to the student, the Registrar, the Director of Financial Aid, and the Dean no later than one week before the last class day of the designated semester in residence.

When the provisional status relates to transcripts or administrative requirements:

- Both BFA and MFA students will be given one semester to fulfill requirements for termination of the provisional status.
- At the end of the first semester of residence, the Registrar will review the student's status and records. If the requirements to achieve regular student status have not been fulfilled, the student will receive written notification that their CalArts enrollment is in jeopardy of termination. Copies of the notice will be sent to the school dean, mentor, and Financial Aid Office. Students will have until the last day of late registration of the following semester to fulfill requirements or enrollment will be terminated.
- Non-English speaking students who fail to achieve the TOEFL or IELTS score required for CalArts admission may not be admitted to the BFA program.

Dated: May 15, 1998

English Language Proficiency

Applicants are expected to be proficient in the English language before applying for admission.

For applicants whose native language is not English - and their high school, college, or university education was in a language of instruction that was not English - you must provide evidence of English proficiency at a level that will permit undertaking and completing their course of study at CalArts.

Applicants must take one of the tests below and pass at the minimum standard specified for that test.

Approved Tests	Minimum scores for undergraduate admission (BFA):	Minimum scores for graduate admission (MA, MFA, DMA):
Test of English as a Foreign Language (TOEFL iBT)	80	100
International English Language Testing System (IELTS)	6.5	7
Pearson English Language Test (PET Academic)	53	63
Cambridge English Advanced (C1: Advanced)	Grade B or C / 180-200	Grade B or C / 180-200
Cambridge English Proficiency (C2: Proficiency)	Grade B or C / 200-220	Grade B or C / 200-220
Duolingo English Test	105	120
SAT Critical Reading and Writing Test	500	NA

In some cases, a student may be conditionally accepted. Students conditionally accepted for low test scores will be required to do one—or all—of the following:

- complete an intensive English Language program prior to their enrollment,
- retake one of the tests below and submit an updated score,
- meet regularly with an academic advisor during their course of study.

CalArts reserves the right to require an English language proficiency exam at any point during the application process of any applicant whose English proficiency is in question.

All students for whom English is a second language, whether they have met the minimum standard of one of the approved tests or not, will be required to take a writing placement test during orientation week at CalArts. CalArts reserves the right to require English as a Second Language, or Supplemental English for Artists (both two semester courses) of any student who demonstrates insufficient English proficiency on the writing placement test.

Dated: January 25, 2024

Academic Policies - Alcohol and Drugs Policy

Academic Policies

Alcohol and Drugs Policy

Alcohol and Drugs Policy

Both federal and state laws prohibit the unlawful possession or distribution of illicit drugs and alcohol. In the state of California, anyone under the age of 21 cannot be served or be in possession of alcohol. CalArts also has standards that prohibit the unlawful possession, use, transport, manufacture or distribution of illicit drugs, drug paraphernalia or simulated drugs and alcohol by students, staff and faculty on Institute property or as part of the Institute's activities. Alcohol may not be sold anywhere on the CalArts campus. Violations of the Institutes alcohol and drug policy will be addressed as disciplinary actions.

Reference to alcohol includes any beverage, mixture or preparation containing ethyl alcohol such as beer, wine and all forms of distilled liquor. Drugs are any substance that have known mind or function altering effects on a human subject, specifically including psychoactive substances and including but not limited to substances controlled, regulated or prohibited by state and federal laws.

CalArts permits the lawful serving of alcoholic beverages at parties and receptions that have been approved by the Vice President of Facilities. Students, faculty and staff who wish to host receptions in connection with approved events should fill out the appropriate application with the Institute Schedulers in the Service Center/Mailroom at least one week prior to the proposed event. In the public areas of campus, the only permitted alcohol is alcohol served at approved receptions or parties. Alcohol is generally not approved for events before 5 p.m. Monday-Friday. The Vice President of Facilities makes the final decision on any issues regarding the date, time or nature of an event. After approval from the relevant offices, the host of the reception must discuss the event with the Activities Coordinator in the Student Experience Office in order to schedule a trained bartender to serve the alcohol to those of legal drinking age.

Responsible Action: CalArts is concerned that in a medical emergency involving alcohol or drugs, students may refrain from calling for help because of fear that doing so might subject them to disciplinary action. Therefore, in order to encourage responsible actions, students for whom medical assistance is sought or those who seek medical assistance for themselves or others, will not be disciplined by CalArts for violating the Alcohol and Drug Policy. This Responsible Action policy applies only to alcohol and drug-related emergencies. Students granted amnesty will not be exempt from disciplinary sanctions resulting from other policies that they violate while under the influence. The use of alcohol and drugs can adversely affect one's health and may negatively impede the learning process and creative art making. In accordance with the Drug-Free Schools and Communities Act Amendments of 1989, CalArts is informing you of the Institute's policies of drugs and alcohol and the health risks associated with use.

Drug	Known Possible Effects
Alcohol	Hangover, psychosis, ulcers, malnutrition, liver damage
Amphetamines	Nervousness, paranoia, hallucinations, dizziness, tremors, decreased mental ability, delusions, seizures, death
Cannabis (Marijuana, Hashish)	Increased heart rate, blood-shot eyes, dry mouth & throat,increased appetite, short term memory loss, reduced coordination, long term effects: chronic bronchitis, and lung cancer
Cocaine/Crack	Tremors, nasal bleeding & inflammation, toxic psychosis, convulsions, death
Hallucinogens (LSD, mescaline & psilocybin)	Dilated pupils, increased heart rate & blood pressure, & psilocybin) hallucinations, Violent episodes may result in self-inflicted injuries, paranoid & violent behavior
Heroin (opiate drug)	Slowing of heart-rate so that coma or death may occur
Inhalants, Nitrates	Headaches, dizziness, accelerated heart rate, hallucinations
Narcotics	Respiratory & circulatory depression, dizziness, vomiting, withdrawal, stupor, death
Psychedelics	Impaired driving ability, depression, paranoia, psychosis
Tranquilizers	Hangover, jaundice, coma, death

Referrals

Psychological Counseling Services, located in F201H, offers licensed Therapists for current students to talk with in a confidential setting. <https://calarts.edu/life-at-calarts/support-and-advocacy/health-and-wellness/counseling>

Narcotics Anonymous (NA) Newhall/Saugus Santa Clarita (661) 299-5599

Academic Policies - Auditing of Classes

Academic Policies

Auditing of Classes

Auditing Classes

Auditing allows currently enrolled students to attend a course without receiving credit. Both undergraduate and graduate students may audit courses. Students must be enrolled full-time in order to audit classes. Auditing requests by part-time, enrolled students may be allowed and will be evaluated on a case-by-case basis. An auditing student should not take the place of an enrolled student.

Individual programs may propose to be excluded from this policy by submitting a rationale to the Provost Office.

During the regular academic year, currently enrolled students may audit a course (sit in unofficially) with the permission of the instructor (and program/school). Summer session auditing is not permitted unless granted by exception from the Provost. Auditors are not entitled to do assignments, to take examinations/quizzes, or required to participate in classroom discussion. Faculty are not obligated to work one-on-one with students who are auditing their courses. No record of the audited class appears on the student's semester schedule or CalArts transcript. Permission is initially at the discretion of the individual faculty member. Audited courses do not count toward full-time enrollment status or financial aid eligibility. Audited courses do not fulfill curricular requirements.

In order to become an auditor in a class a student must be granted permission from the instructor and the Program Director and the Dean's Office.

***Students who were enrolled at CalArts during Spring 2020 and graduated in May 2020 may audit up to 2 classes throughout the 2020-21 academic year for no additional cost.

Academic Policies - Censorship

Catalog Policies

Censorship

Censorship

There is to be no censorship of any work of art, design, performance or publication on the campus.

Members of the Institute, including staff, faculty and students, are instructed to avoid any act that might be regarded as censorship in any official sense.

Student publications shall not be subject to faculty or administrative restraint on the content, except to assure reasonable access to publication for students whose views differ from those of the editor, and to prevent infractions of the law in respect to libel, slander, discrimination or similar matters.

A student publication is a non-commissioned work by students, even if supported by Institute materials and funds.

Academic Policies - Change of School

Academic Policies

Change of School

Change of School

When students wish to change enrollment from one school to another within the Institute, the procedure is as follows:

1. Students must complete an admission application and follow the regular admission procedure for the new school of enrollment as outlined in the Admissions Viewbook, obtainable through the Office of Admissions.
2. A change of school must be requested and the process completed prior to the last day of late registration for the semester in which the change is to take effect.

Academic Policies - Classes Off Campus

Academic Policies

Classes off Campus

Classes Off Campus

All classes will be held on the campus at Valencia, unless specific permission is given by the Dean to hold a class elsewhere.

This policy does not inhibit classes whose nature specifically calls for their being off campus, or limit field trips or visits elsewhere; but does discourage the regular conduct of classes away from the campus.

Academic Policies - Creating, Modifying or Discontinuing Academic Plans and Sub-Plans

Academic Policies

Creating, Modifying or Discontinuing Academic Plans and Sub-Plans

Creating, Modifying or Discontinuing Academic Plans and Sub-Plans

Reason for the Policy

Planning for (1) academic programs and (2) minors/concentrations/specializations involving two or more schools (or not housed within a school) at CalArts is a multi-step process that rests on the foundation of faculty responsibility for academic content and quality. It is designed to ensure that academic plans:

- Reflect shared governance discussions involving faculty within programs/schools and across the Institute;
- Are aligned with the Institute's mission, strategic goals, policies and procedures;
- Benefit from opportunities for coordination and collaboration across the Institute; and

- Enhances availability, consistency, and coordination of information about the Institute's academic plans for transcript records, internal analysis, accountability reporting, and accreditation.

Definitions

This policy includes (1) undergraduate and graduate degree-granting programs and certificates and (2) minors/specializations/concentrations involving two or more schools (or not housed within a school).

Academic Plan – Undergraduate or graduate credit-bearing degrees, me ´ tiers, and certificates that may appear on official Institute transcripts.

Academic Sub-Plan – A formally designated, distinct content area within a broader discipline (e.g., minor, track, concentration, specialization).

Criteria for Evaluating a Plan or Sub-Plan

- Congruence with the mission and priorities of the Institute, the school, and the program;
- Need and demand for the plan or sub-plan;
- Comparative advantage over similar programs, minors, concentrations, or specializations offered elsewhere;
- Efficiency, effectiveness, and use of resources in support of the program, minor, concentration, or specialization,
- Quality and assessment;
- Appropriate review and approval mechanisms followed during development/review.

Adding or Discontinuing Academic Plans or Sub-Plans

Programs and Schools may not advertise or initiate new academic plans/sub-plans and recruit or admit students to them prior to formal approval in the below process. If a plan or sub-plan is discontinued, currently enrolled students are allowed to complete their plan or sub-plan within a reasonable amount of time to be specified in the proposal.

1. **Initial Interest Discussions:** The process begins with a group of faculty, program director/s or dean/s, etc. (the creators) holding initial discussions for the creation or discontinuation of an academic plan/sub- plan.
2. **School discussions** (when applicable): If the academic plan/sub-plan currently resides in or will reside within one of the existing schools, the school's executive committee (composition of the committee is defined by the school) and dean consents to its creation or discontinuation.
3. **Need Statement:** The creators provide a written need statement with a proposed timeline for approval to both Academic Council and Deans Council. Consent should be given by the majority of Council members of at least one Council to proceed and then a timeline for review and approval will be set. If both Councils reject the need statement, the statement may be revised and re-presented.
4. **Plan/Sub-Plan Proposal:**
 1. The Office of the Provost will determine the type of review needed and will provide direction on how to develop the plan/sub-plan proposal.
 2. The creators submit plan/sub-plan proposal to the Office of the Provost to officially propose the creation or discontinuation of an academic plan/ sub-plan and begin the review process.
 3. Provost (or designee) reviews the proposal, works with the creators to make edits if needed, and verifies the proposal meets accreditation standards/requirements (as needed).
5. **Campus Approval:**
 1. The proposal is presented to the Joint Academic Council & Deans Council. Each Council reviews the proposal.
 2. The creators present the proposal to the Joint Academic Council/Deans Council. Each Council reviews the proposal.
 3. If accepted, a recommendation to approve will be forwarded to the Provost.
 4. If both Councils reject the proposal, the proposal may be revised and re-presented. Provost approves the proposal.
6. **Substantive Changes Approval:**
 1. The Provost and dean present the academic plan proposals to the Academic & Campus Affairs Committee.
 2. Board of Trustees reviews and approves academic plan proposals.
 3. Accreditation reviews and approves (as applicable).
7. **Notices:**
 1. Office of the Provost sends final approval notice to school, Deans Council & Academic Council; notifies Registrar, Admissions, Communications, and Advancement (as applicable).
 2. School/area overseeing the proposal makes changes to recruiting materials, applications, and the following academic year's catalog.
 3. Office of the Provost conveys the approved changes to the campus through an official notification.

Modifying Requirements of an Existing Academic Plan or Sub-Plans

Programs and schools periodically change an academic plan or sub-plan requirements, following their individual governance procedures.

The Office of the Provost is responsible for reviewing and approving modifications to requirements of an existing academic plan/sub-plan. Academic plan/sub-plan changes must not take effect until they have the Provost's (or designee's) approval and are registered in the course catalog.

Any change in plan/sub-plan requirements takes effect no earlier than the following academic year and will not normally be imposed on currently enrolled students who have been admitted to the plan/sub- plan, but the new requirements may be offered to them as an option. If the faculty of a program or school conclude that a new requirement is essential even for currently enrolled students, approval of the dean of the school must be obtained before imposing the requirement on students.

Programs and schools are responsible for communicating to perspective and current students their program/school policies and decisions regarding changing requirements to an existing academic plan or sub-plan.

Academic Policies - Credit Hour Designation and Review Policy

Academic Policies

Credit Hour Designation and Review Policy

Credit Hour Definition

Each unit of undergraduate course credit at CalArts requires a minimum of three hours of student work per week, for each week over the duration of a given semester. For example, each two-unit course represents 6 hours of involvement per week throughout the fall or spring semester. Each unit of graduate course credit requires a minimum of four hours of student work per week, for each week throughout the spring or fall semester. Using this formula, 45 hours of study in one semester is the minimum requirement for one unit of credit, and this definition holds for all types of courses (lecture, seminar, studio, independent study, lab, practicum, interim, etc.) regardless of the amount of credit offered. Winter Session, 2-week intensive courses also follow this formula, but applied within the 2-week period. For a Winter Session course to receive 1 credit, the course must ensure that students are actively involved inside or outside the classroom for approximately 45 hours.

Student involvement may include class time and time spent in direct interaction with faculty, as well as time spent preparing for classes through art making, participating in rehearsals, completing assignments, conducting research, reading, participating in group study or discussing class topics with others, attending relevant lectures or cultural events, or any activity that will assist the student in achieving course objectives. Faculty might also require, or students might choose, to spend more hours than the minimum requirement.

Assignment of Course Credit

Units of credit are assigned by the Provost in response to requests submitted from the Dean's office from each school through the *Course Proposal Form*. The form is received and processed by the Associate Provost for Academic Affairs, and asks for detailed information about the anticipated learning outcomes, specific expectations for work outside of the classroom, and whether it fulfills a requirement for Critical Studies (general education), as well as the number of hours that students will be expected to engage both inside and outside of class. Once approved, the Provost notifies the registrar, and the registrar updates the academic catalog.

Review of Course Credit

Reviews of course credit are conducted as part of CalArts academic program review and the Council of Arts Accrediting Associations reviews. The Dean of each school is responsible for ensuring consistent adherence to the Credit Hour policy within their schools. The Provost's Office may also conduct periodic reviews of credit alignment across the curriculum.

Academic Policies - Degree Conferral

Academic Policies

Degree Conferral

Degree Conferral

Upon completion of overall unit requirements, Institute residency requirements, and all final program requirements, including all coursework, reviews, performances, and any other non-course requirements specified by the School, the Registrar's Office will post the degree or certificate to the academic transcript and order a diploma.

Neither the transcript nor the diploma will be released to students who have not fulfilled all obligations to the Institute.

CalArts has three conferral dates each year: the final date of the spring and fall semesters as determined by the academic calendar, and August 31 for students completing their degree requirements during the summer months.

Students will be assigned the conferral date most closely following the completion of all degree requirements. The date that degree requirements are completed may be the final day of the term, or it may be determined by the date of completion of the thesis project or dissertation, completion of an outstanding incomplete grade, or completion of approved transfer coursework. The completion date will be reflected on the transcript, and the conferral date will be reflected on the diploma.

Academic Policies - Exhibitions/Presentations Policy

Academic Policies

Exhibitions/Presentations Policy

Exhibitions/Presentations Policy

Initial Policy:

1. Outdoor space is available for Institute purposes for the use of students, faculty or staff at the discretion of the President or designee. Allocations may not be made on a permanent basis nor may so much space be allocated to one project that other projects have less than adequate space.
2. In allocating space, all possible latitude will be allowed for use of CalArts grounds, spaces, interior and exterior wall decoration, provided that there is no glue on glass windows, painting or other markings directly on the wall, or any alterations to Institute property without specific permission of the deans and the Institute Scheduler. The dean of each school will be responsible for authorizing use of that school's allocated space. The Institute Scheduler is responsible for approving the use of all other space except for outdoors and office space noted in paragraph 1 and 3. Space is allocated on a first-come, first served basis. All posters are to have either the date of the event or must be dated. Posters may not be removed before the event. Posters advertising an event are considered artwork and may not be vandalized, damaged or stolen. Posters are to be removed after the event or after 30 days, whichever comes first.
3. The use of office space is at the discretion of the dean or department head. The use of the administrative foyer and hallway (F-block, 3rd floor) and the main entry lobby (west wall and south walls) are at the discretion of the President.
4. Posters are not to be placed on glass or wooden doors due to safety codes and/or fire regulations.

Institute Exhibit Review Committee

In order to implement and maintain exhibit policies, there shall be an ad hoc review committee structured as follows:

The Institute Exhibit Review Committee shall consist of the following:

1. One representative from each School appointed by the deans
2. The Vice President/CFO
3. The Institute Scheduler

The following are the responsibilities of this committee:

1. The review of policy to govern the use of exterior space.
2. The allocation of space or the adjudication of any difference of opinion concerning an exhibit or presentation.

School Responsibilities

1. Each School is responsible for choosing a representative to the committee.
2. Each School is responsible for establishing procedures for governing the hanging/exhibiting of objects and/or presentations within the space assigned to the School.
3. Exhibits/presentations must meet all applicable city, county, state and federal laws.

Censorship

1. CalArts does not censor any work on the basis of content, nor is any work at the Institute subject to prior censorship.
2. If any person objects to any exhibit or presentation, that person should convey the objection in writing to the student's dean. The person will receive a written answer to the objection within 48 hours of its receipt. If the person is dissatisfied with the decision, he/she may appeal the decision to the Institute Exhibit Review Committee. The decision of the Committee is final.

[Academic Policies - Exhibitions/Presentations Policy](#)

Academic Policies - Exhibitions/Presentations: Safety

Academic Policies

Exhibitions/Presentations: Safety

Exhibitions/Presentations: Safety

The primary responsibility for determining that an exhibit or presentation is physically unsafe or hazardous belongs to the Dean of the School and the Associate Vice President of Facilities or the Associate Vice President's delegate.

Exhibits/presentations must meet all city, county, state and federal safety rules and regulations.

If these two officials do not agree, the Committee will review the matter. The chairperson will advise each member of the Committee that a question of safety has been raised and will request the opinion of each member. If the majority of the Committee believes that the exhibit or presentation is unsafe, the person responsible will be requested to modify or remove the exhibit or presentation. If it is not removed or corrected immediately, the chairperson will make a report to the dean and the Provost, who will take immediate action.

Academic Policies - Extension of Degree

Academic Policies

Extension of Degree

Extension of Degree / Extension of Program

BFA students who, at graduation, have not completed all degree requirements beyond course credits, e.g., recitals, etc., must petition their school for up to one year of extension in order to complete these degree requirements.

MA students are not eligible for an extension of degree.

MFA students who are unable to complete degree requirements other than course credits, e.g., thesis projects, recitals, etc., must petition the appropriate school each year, by letter, to request an extension for a maximum of five years. These annual requests for extension should include a statement of the student's progress toward the completion and an explanation of the reason for the extension. After five years, petitions for extension for completion of MFA degree requirements must be submitted to the Deans Council for approval.

DMA students who are unable to complete the Doctoral Project or Final (Summative) Portfolio Review must petition the School of Music each year, by letter, to request an extension for a maximum of two years. These annual requests for extension should include a statement of the student's progress toward the completion and an explanation of the reason for the extension. After two years, petitions for extension for completion of DMA degree requirements must be submitted to the Deans Council for approval.

Academic Policies - Faculty Merit Evaluation Process Overview

Academic Policies

Faculty Merit Evaluation Process Overview

Faculty Merit Evaluation Process Overview

Rationale and Philosophy

We, CalArts faculty, are highly productive across many fields, earning high profile awards on par with other leading institutions, and routinely innovating and adapting academic programs that attract top students to our programs. The distinguished role our faculty and programs hold among national arts institutions is, in part, related to our rejection of a traditional tenure model based in rank and hierarchy, in favor of an alternative model of radical pedagogy developed over many generations of faculty, making CalArts an exceptional presence in higher education. In this way, CalArts faculty have elaborated a creative and cooperative community of artists that values process and production and actively resists efforts to standardize our teaching and creative practices. Free of a fixed tenure clock or seniority rule, CalArts faculty are emboldened to take risks outside of traditional practices, innovate experimental genres in advance of their wider recognition, and approach the creation and delivery of our academic programs through collaboration and shared governance to the benefit of the Institution.

The comprehensive Faculty Salary Advancement Plan (FSAP) reflects the values of collectivity and collaboration by providing sustained salary progress through a step system that ensures the progress of at least one step with each contract renewal, or every three years for faculty with longer contracts. This step is in recognition of faculty merit and is part of our merit-based advancement for faculty.

Additionally, faculty may pursue further salary step increases, at each contract renewal or three year interval, through a transparent merit application process. Merit awards can increase faculty salaries by one or two FSAP steps. The peer-driven process of faculty merit evaluation is designed to be flexible enough to encompass the many types of work with distinction that exist within each of the schools and programs. The criteria for merit advancement reflects the work that we as faculty value most: innovation and excellence in teaching; service toward cooperatively building and adapting the dynamic programs that define our Institution; eclectic creative and professional practices within arts communities both large and small; and creating and sustaining a diverse, equitable, and inclusive learning environment for our students and community. The FSAP

graduated salary structure and merit advancement with transparency, minimal bureaucracy, and a commitment to our community values enables all faculty to see their wide-ranging efforts reflected in routine and flexible salary improvements at levels that are responsive to established market ranges, while maintaining CalArts commitment to a more cooperative and egalitarian model of faculty careers.

Merit Application Process

Applying for merit review is optional and initiated by the individual faculty member. In addition to moving up one salary step automatically upon contract renewal (or every three years for those with longer contracts) faculty are also eligible to apply, at the same time, for another one or two step advancement for distinguished work during the period since their last merit award (minimum of three years) in one of, or any combination of the following categories: teaching, service, professional practice.

The purpose of the merit program is to recognize the specific and noteworthy achievements of individual CalArts faculty beyond the routine levels of activity expected in each of these category areas. While it is anticipated that most faculty will attain merit recognition at some point in their career at CalArts, it should not be expected each time a faculty member is eligible.

The core purpose of a merit award is to allow the distinguished accomplishments of faculty to be documented and acknowledged, even as we belong to a larger Institute faculty who routinely perform at a high level of accomplishment. It is an assessment process to determine when faculty have substantially evidenced a record of distinguished work in one or more of the four category areas. Provost Office will notify faculty of their eligibility to apply for merit and, according to a specified schedule of submission deadline(s), the faculty may initiate their merit review through the following steps:

1. Faculty applicant submits:

- A cover letter identifying the merit category(ies) they are applying within,
- how many step advances requested, and a narrative of rationale for consideration, along with
- all relevant documentation to evidence the specific achievements and the specific impacts this work has had for the period under consideration. Application will go to the faculty merit committee and to the School Dean simultaneously, then to the Provost Office.

2. Review by Committee

The Institute Merit Review Committee will meet to discuss and review the application and supporting documentation, applying the relevant merit guidelines (see below), and one committee member will write a brief statement incorporating the committee's collective assessment and recommendation or non-recommendation.

3. Review by Dean

The Dean will likewise independently review the application and write a separate statement of recommendation. All applications, along with both statements, will advance to the Provost Office for final review, regardless of whether they have the support of the faculty committee and/or Dean.

4. Review by Provost

The Provost's Office will review the applications and accompanying statements from the committee and Dean. The Provost may request further information or documentation from the applicants, and will request review by the Institute Merit Appeal Committee, a subcommittee of the Academic Council, when there is disagreement between the Institute Merit Review committee and the School Dean. The Provost will review all previous statements, perform an independent review, and make a list of recommendations.

5. Approval by the President

The recommendations from the Provost are sent to the President for final approval.

Notification and Appeal or Grievance

After final approval, the Provost will notify the faculty of their merit decision. The Provost's Office will provide each applicant with a decision on their merit application that includes the statements from the faculty merit committee and the Dean.

Applicants who feel either the process or application of criteria was in error may initiate an appeal of the merit award decision to the Provost Office, who will send it to the Institute Merit Appeal Committee for a recommendation. See details on procedures for Appeals and Grievances below.

Merit Review Process Guidelines

Eligibility: Regularized and Technical Faculty will be eligible to apply for merit at designated 3 year intervals, timed with contract renewal when possible.

If a faculty member chooses not to apply in their appointed application time, they must wait until their next merit review period to apply.

Only work completed during the period since submitting the application for the last successful merit award can be included in the merit application. E.g., a work completed in 2018 that was included in a successful merit application submitted in 2019 cannot be included again in subsequent application in 2022. However, if the application was not successful, or the faculty member did not apply for merit in 2019, the 2018 work may be included in the 2022 application.

Only faculty in good standing, who have met the requisites of contract renewal, may apply. If a faculty member is subject to disciplinary action, their merit review will be delayed until the matter is resolved. In the instance of such a delay, the merit review will resume once the matter is resolved, even if their designated merit eligibility window has expired.

Institute Merit Committee:

Merit will be reviewed by the Institute Merit Committee. This committee will be composed from the Academic Council, either by its members or their designees. In years with a large number of applications, there may be multiple committees formed. Each committee will:

1. Have a representative from every school with applicants.
2. Committee membership should rotate yearly and should exclude faculty with an application under review. Faculty can, with approval from the AC, serve on the committee multiple years but the committee must be reconstituted every year
3. Faculty under review can not serve on the committee reviewing their application
4. The process of review and the materials reviewed are confidential
5. Committee members must inform the Director of Faculty Affairs of any conflict of interest they have with any of the applicants; applicants will be told the composition of their committee
6. The work of writing the one page summary evaluation of the applicant should be divided and shared among the committee (i.e., each statement written by a different member)
7. written statements should respond to the applicant's provided evidence.

Institute Merit Appeal Committee

This committee is constituted from the AC or its designees. It will review applications

- At the request of the Provost, when the original review committee and the Dean differ in their assessment or recommendation.
- When an applicant appeals their decision.

This committee must be constituted with different members than the ORIGINAL Institute Review Committee that reviewed the applicant's material.

Confidentiality:

Faculty merit review applications and decisions are confidential. Faculty review committee members must refrain from discussing individual merit applications outside of committee meetings.

There will be no public announcements made about merit award decisions.

The statements written by the faculty merit review committees and Deans will be provided to faculty applicants, but will not be used in future merit reviews or contract renewals.

Previous merit award decisions may not be considered when faculty submit new merit award applications. Yearly reports on the overall results of merit applications (without names) will be provided to the Academic Council for ongoing review (see Ongoing Assessment section, below), along with reports on any salary adjustments made outside the merit review process.

Because committees are not conducting a full review of all aspects of an applicant's work, the statements of the committee must be understood narrowly to comment only on the specific criteria identified in merit review and therefore cannot be used as, or in place of, a performance review.

Timeline:

Applicants will be notified of their upcoming merit review deadline the semester before the application will be due.

Before review begins, the Dean and Provost establishes that faculty is in good standing and has satisfied the requisites for contract renewal.

If during the time of merit review the faculty member is subject to disciplinary action, the merit review process will be paused until the disciplinary matter is resolved.

The Faculty Merit Review Committee's and the Dean's recommendations and accompanying statements should be forwarded to the Provost Office by March 30th.

The Provost Office, and Institute merit committee if applicable, will complete review decisions and statements by April 15th.

The Provost will notify the faculty who have been determined to not meet the standard for merit in order to give them [2 weeks] to appeal and provide any additional information. Appeals will be decided before the end of Spring semester(See Appeal/Grievance Process). When appeals are completed, the Provost gives a final merit recommendation list to the President, who makes final decisions and formally awards merit by the end of spring semester.

Appeal and Grievance Processes

Applicants may write a letter of appeal if their merit application is not approved, in which they can provide clarification and/or further evidence of merit in support of their original application. The Institute Merit Appeal Committee will review the appeal letter-- along with the initial decision and write a brief statement of review to the Provost. The Provost will then review and recommend to the President's Office for review and approval. This process should be completed by [insert date].

If the applicant feels there were flaws in the process of their merit review, they may submit a Grievance to the Institute Merit Review Committee which specifically outlines their critique. The Committee will review the case and write a response which goes to the Provost for adjudication. Grievances must be made within [xx time] after receipt of the initial merit review decision, and resolved within [yy time] after they're submitted.

The members of the Institute Merit Review Committee will rotate every 2 years, along with other Academic Council appointments.

Ongoing Assessment of Merit Process and FSAP

There will be a yearly assessment of the merit process conducted collaboratively between the Provost Office and Academic Council. By November of each year, Faculty Salary Committee, a subcommittee of the Academic Council, will receive a report of the results of the number of applications and decisions from the year before, as well as a report if any adjustments have been made to individual faculty salaries outside of the merit review process. This will allow the Faculty Salary Committee to assess the merit program as a vehicle for allowing most faculty to achieve salaries beyond the minimum introduced by FSAP over a long career at CalArts. Academic Council, Deans, and Provost Office will also continue to review and hone the criteria descriptions for the four categories of merit, along with revisions of the accompanying school-specific guidelines. It is expected that in the early stages of implementation, there will be changes and improvements toward the goals of transparency, clarity of criteria standards, equity and inclusivity in the process, and discernment within the committees in applying the standard of distinction. Any changes to the merit criteria and/or process will be subject to approval by Academic Council and the Provost's Office. It is also necessary to routinely complete comparative market studies against peer institutions every five years. (With the last Faculty Compensation Study completed in 2015, a new updated study should begin in 2020.)

Merit Criteria:

The merit review system allows a faculty member demonstrating excellence in teaching, service, and/or professional practices to apply for an accelerated progression through the salary step system.

The award of merit will be based upon a standard of distinction in the merit category(ies) selected. The applicant must provide a persuasive narrative in their cover letter, along with supporting documentation that evidences the impact of the meritorious work. As the Institute Committee, Deans and the Provost consider the merit application, they should practice discernment in holding a standard of distinction: productive activity in the areas of the merit category are expected by all faculty, awards of merit are for those faculty whose activity is both noteworthy and demonstrates a substantial and impressive impact as a result. Rather than strict metrics, we intentionally leave the criteria open so that faculty can most fully represent their unique approaches to teaching/mentoring, service, and professional practice with the expectation of substantive and discerning engagement by their peers in the in-school committees, their Dean, and their Provost.

Significant and evidenced impact around Inclusion, Diversity, Equity and Access are of primary importance to the Institute and will be considered within any of the three above categories.

Faculty who advance and augment recognition, knowledge and implementation of improved, equity, diversity, and inclusion (EDI) activities should be acknowledged through merit awards and other avenues. As with any educational institution, building and sustaining an active culture of equity, diversity, inclusion, and access at CalArts requires ongoing change at the systemic level of the Institute. Faculty contributions to a culture of greater EDI are essential to the CalArts mission; such work addresses past and present inequities, grows our capacity to include new and different voices, and is intrinsic to the radical and visionary aims of CalArts.

Equity describes providing individuals the access and tools they need in order to be successful. Diversity refers to categories including race, gender, sexuality, class, geography, ability, language, national origin, world view and other variations. Actively building a diverse community and pedagogy at CalArts brings crucial heterogeneous experiences and histories to the forefront of art practice and education. Inclusion actively addresses policies, pedagogy and institutional practices to remedy gaps and oversights in equity and diversity. All three categories of EDI address historical and contemporary imbalances in academic, artistic and professional access in U.S. society. This work will be recognized in all three of the merit categories.

Faculty work toward diversity, equity and inclusion can occur in the areas of research, creative work, teaching, mentorship and service. It is critical to note that merit in the EDI category does not reward general awareness of EDI issues but rather active programming that specifically addresses its concerns.

Guidelines and Evaluation:

Though the work of review is qualitative and evaluative, it must also adhere to the established guidelines: only the criteria named in the application can be considered, only activity in the specified window of eligibility, and the standard of distinction with evidence of impact must be maintained and applied without preference.

Below are examples of the types of activities that might reach the standard of distinction with evidence of impact according to criteria within each of the categories.

It is expected that these criteria guidelines will routinely be revised to best represent the range of faculty activity considered distinguished by our broad CalArts community of artist faculty.

Teaching/Mentoring:

CalArts teaching extends beyond one's course load and merit assessment enables all forms of mentoring and student enrichment to be articulated, valued and rewarded. Merit for teaching is awarded to recognize faculty who exemplify the kind of innovation, excellence, and transformative pedagogy that CalArts values. Distinction in the realm of teaching should be measured by the impact that an individual faculty member's teaching and mentoring has on student learning, development, and work, both within and outside of the faculty member's metier.

Teaching:

- Courses taught (including Winter Session and independent studies)
- Mentoring (student reviews, etc)
- CalArts production work involving students
- Significant initiatives focused on Inclusion, Diversity, Equity and Access within a program or school's curriculum or pedagogical culture
- Specific leadership roles in promoting dialogues around anti racist teaching and curriculum within the school
- Technical instruction
- Reference and research instruction
- Course integrated instruction
- Curricular planning.

Examples of evidence to demonstrate distinction in teaching include (but not limited to): development of outstanding courses that generate high demand and student engagement, documentation of high impact practices that demonstrably enhance student learning, initiative and innovation to expand research practices and information literacy, collaboration with students, use of new technologies in teaching to improve student learning, demonstrable efforts to increase Inclusion, Diversity Access and Equity within the classroom, curriculum or student learning environment, including but not limited to introducing curricular or pedagogical diversity into the program.

Service:

Merit for service is awarded to recognize faculty leadership at the program, school, and Institute level. Distinction in the realm of service should be measured by the sustained positive impact that an individual faculty member's leadership role has had on their program, school, and/or Institute. Though the work of some of these roles comes with a stipend, the specific activity and accomplishments within these roles are still eligible for merit consideration, depending on the applicant's ability to produce evidence of impact.

Institutional Service: Leadership and evidenced impact through participation in

1. School committees: meetings, search committees, admissions, recruitment
2. Program development or assessment
3. Institute committees: Academic Council (and subcommittees), Diversity and Equity, Faculty Development Fund, etc.
4. Administrative leadership roles: Program Chair, Associate Dean, Academic Council Chair, etc.
5. Creation of new initiatives that increase the Inclusion, Diversity, Equity and Access in the Institute or in a specific school

Examples of evidence of leadership impact may include (but not limited to): the creation of new programs or restructuring of curriculum within programs; leadership of a successful program review process; specific work to improve programs or schools in sustained ways e.g. recruitment and yield of new students, evidenced and substantial work towards creating or facilitating new initiatives around Inclusion, Diversity, Access and Equity, creation of support structures (organizations and clubs) for students, particularly ones that support underrepresented students, substantive revisions to curriculum, initiatives to improve outcomes for students; Institute level leadership of all kinds, specific leadership around anti racist or EDI initiatives; stewardship of new and/or revised policy, etc), leadership roles in programming, particularly programming that expands the diversity and inclusion of an individual school or the Institute.

It is also possible for applicants to articulate and evidence work that they have done in serving specific communities of students through practice or identity, including unofficial demands such as additional mentorship outside the program, student support or other often invisible demands as made to faculty of color or underrepresented identities.

Professional Practices:

Merit for professional practices is awarded to recognize faculty who create substantial works either independently or in collaboration with other artists that are met with substantive engagement beyond the community of CalArts. Distinction in the realm of professional practice should be measured by the impact that this external professional work has within the field(s) and audiences it is addressed to at the regional, national, or international level.

Professional Practices:

1. Individual or group artistic work or research
2. Exhibition, publication, or performance
3. External awards and honors
4. Work with external organizations or conventions

5. Worked professionally to increase Access, Diversity, Inclusion and Equity in their professional field or creative community
6. Work with external communities and social justice organizations
7. Other as specified by applying faculty

Examples of evidence of distinction in professional practices include (but not limited to): invited or public performances, peer reviewed publications by presses or journals relevant to your field; invited, juried, or public exhibitions, honors/awards; roles in professional organizations/festivals (boards, leadership in national organizations, editorial work for press/publication, curatorial work); recognition for community based initiatives or efforts, specifically those around social justice, inclusion, equity, diversity of community or access; selection of work for presentation at conferences or festivals. It is important that eclectic creative and professional practices within arts communities both large and small are recognized and given full consideration.

1FSAP refers to the automatic progress through steps along with availability of more selective merit application. CalArts faculty created and developed this plan with the current number of regular faculty at CalArts in mind. If regular faculty are dismissed (subject to fair practices as outlined in the Faculty Handbook) or retire, the regular faculty line must be maintained within the school and filled in a timely manner with another regular faculty member of the same FTE.

Academic Policies - Family Education Rights and Privacy Act of 1974 (FERPA)

Catalog Policies

Family Education Rights and Privacy Act of 1974 (FERPA)

Family Education Rights and Privacy Act of 1974 (FERPA)

The Family Educational Rights and Privacy Act ("FERPA") affords eligible students certain rights with respect to their education records. An eligible student is an individual for whom California Institute of the Arts ("CalArts") maintains education records, and who is or has been enrolled in and attended CalArts, the Los Angeles Conservatory of Music, or the Chouinard Art Institute.

These rights include:

The right to inspect and review education records, with certain exceptions.

Education records are defined as records maintained by CalArts, or persons acting for CalArts, that contain information directly related to the student.

Students who wish to review their education records must submit a written request to the Office of the Registrar identifying the specific records they wish to review; as a general rule, a request to review "all records" is not sufficiently specific. CalArts will make the education records available for inspection by the student within forty-five days of receiving the written request, and the Office of the Registrar will notify the student of the time and place where the records may be inspected. A student will not typically be provided with copies of any part of their record other than the transcript.

FERPA does not provide students with the right to access certain records, including but not limited to financial records of a parent, and confidential letters or statements of recommendation for admission, employment, or honorary recognition. In addition, where a record contains information that concerns more than one student, a student requesting inspection will be informed about the information only insofar as it pertains to that student.

The right to seek to amend education records.

Students who believe that specific items contained in their education records are inaccurate, misleading, or an invasion of privacy may seek to have their records amended.

Requests to amend education records must be submitted in writing to the Office of the Registrar, clearly identifying the record(s) that the student seeks to have amended and specifying the reasons they believe the record(s) to be inaccurate, misleading, or an invasion of privacy. If CalArts declines to amend the records as requested, the Registrar will notify the student in writing of the decision and advise the student of their right to a hearing regarding the request for amendment. If, after the hearing, CalArts determines that no amendment will be made to the record(s), the student has the right to place in their records a statement commenting upon the information and/or setting forth any reasons for disagreeing with the decision of CalArts. This statement will be maintained and released with future requests for information regarding the student.

The right to seek to amend an education record under this procedure may not be used to question substantive educational judgments that have been correctly recorded, or to contest a final grade or other written evaluations that reflect institutional judgment of the quality of a student's academic and artistic performance. For example, FERPA does not give a student the right to contest a grade given in a course, but does give the student the right to seek to correct an improperly recorded grade.

The right to exercise certain control over the disclosure of information contained in the student's education records.

Personally identifiable information contained in the student's education records may not be disclosed without the student's prior written consent, except to the extent that FERPA authorizes disclosure without consent.

CalArts has designated the following student information as directory information: name; address; telephone number; email address; date and place of birth; dates (terms) of attendance; enrollment status (full-time/part-time status and class level); degrees and awards received; program of study; photographs; most recent previous school attended; and participation in officially recognized activities. Directory information does not include social security number, student ID number, race, ethnicity, nationality, or gender.

FERPA does not require consent for the disclosure of "directory information," which may be disclosed for any purpose, at the discretion of CalArts. Students who wish to restrict the release of their directory information must notify the Office of the Registrar in writing. Upon receipt of this request, a hold will be placed to prevent further disclosure of directory information. This hold will then remain in effect until the student files a written request to remove it.

Additionally, FERPA does not require consent for disclosure of information to "school officials" with "legitimate educational interest." A "school official" is any person employed by CalArts in any administrative, supervisory, academic or research, or support staff position; any person or company with whom CalArts has contracted to provide a service to or on behalf of CalArts (such as an attorney, auditor, or collection agency); any person serving on CalArts' Board of Trustees; or any student serving on an official committee. A school official has a "legitimate educational interest" if the official needs to review specific information in an education record in order to fulfill the official's professional responsibility.

FERPA identifies other exceptions in which CalArts is permitted, and sometimes required, to make disclosures of personally identifiable information from student records

without the student's prior written consent. Some of these exceptions are (i) to schools where the student plans to enroll or transfer; (ii) in connection with financial aid for which the student has applied or which the student has received; (iii) to authorized representatives of the U. S. Comptroller General, the U.S. Attorney General, the U.S. Secretary of Education, or state and local educational authorities; (iv) in connection with studies conducted for the purpose of development and validation of predictive tests, administration of student aid programs, or improvement of instruction; (v) to accrediting organizations to carry out their accrediting functions; (vi) to parents of an eligible student if the student is a dependent for IRS tax purposes; (vii) to comply with a judicial order or lawfully issued subpoena; (viii) to appropriate parties including, but not limited to, parents of an eligible student, whose knowledge of the information is necessary to protect the health or safety of a student or another individual; (ix) to the general public, the final results of a disciplinary proceeding if CalArts determines the student is an alleged perpetrator of a crime of violence or non-forcible sex offense, and the student has committed a violation of the school's rules or policies with respect to the allegation made against him or her; (x) to the victim of a crime of violence or non forcible sexual offense, who will be provided with the results of a disciplinary hearing conducted by CalArts against the alleged perpetrator; and (xi) to parents of a student regarding the student's violation of any federal, state, or local law, or of any rule or policy of CalArts, governing the use or possession of alcohol or a controlled substance if the student is under the age of 21. Information concerning these and other exceptions is available through the Registrar's Office.

A student may not use the withholding of directory information to prevent CalArts from disclosing or requiring the student to disclose their name, identifier, or e-mail address in a class in which the student is enrolled, or to prevent disclosure to school officials with legitimate educational interests, or to prevent disclosure otherwise required or permitted by law.

The right to file a complaint for alleged violations of their FERPA rights.

Students who have questions about their FERPA rights should be directed to the Registrar. Official complaints are submitted in writing within 180 days of the alleged violation to the US Department of Education at the following address:

The Family Policy Compliance Office
US Department of Education
400 Maryland Avenue SW
Washington DC 20202-5920

[Academic Policies - Family Education Rights and Privacy Act of 1974 \(FERPA\)](#)

Student Records

Catalog Policies

Student Records

Student Records

Each student has a Permanent Record maintained online or in the Registrar's Office. In addition, the Office of Financial Aid maintains student financial aid records. Accounting maintains student ledgers records in the Accounting Office.

CalArts complies with student rights established under the law affecting student records (The Family Educational Rights and Privacy Act of 1974). Within the CalArts community, only those members, individually and collectively, acting in the students' educational interests are allowed access to students' records. A description of the process used for compliance with the Act is provided in this publication and includes the rights of student access to all records except where described. Questions should be discussed with the Registrar (academic records), the Controller (accounting records) or with the Director of Financial Aid (financial aid records).

Academic Policies - Full-Time Enrollment

Academic Policies

Full-Time Enrollment

Full-Time Enrollment

All degree and certificate seeking students at CalArts are expected to attend on a full-time basis. Full-time status at CalArts depends on the School and the degree program in which a student is enrolled, and is defined as the following:

- 12 units per semester for all undergraduate students, all graduate students in the Schools of Art, Dance, and Music.
- 10 units minimum per semester for all doctoral students in the School of Music
- 9 units minimum per semester for all graduate students in the Schools of Critical Studies, Film/Video and Theater.
- 6 units minimum per semester for all second year, low-residency MA students in the School of Critical Studies.

These are the minimum units students must enroll in to qualify for full-time status and to remain in good academic standing. However, students typically must enroll in additional units each semester in order to meet program requirements, and to graduate within the expected number of semesters.

Students who fail to enroll in the minimum units required for full-time study will be flagged for failure to meet minimum expectations for progress to the degree, and will be subject to the terms of CalArts Academic Standing and Métier Standing policies.

Academic Policies - Grade Appeals

Academic Policies

Grade Appeals

Grade Appeals

When a student wishes to appeal a grade: the student must first appeal to the instructor who assigned the grade in question.

Where there is no satisfactory remedy through appeal to the instructor, the student may file written appeal to the dean of the school in which the course is offered. The decision of the dean is final.

"NC" grades may not be changed to a grade except by means of a petition to the dean of the School involved. Such changes must be initiated by the instructor of the class or, in the instructor's absence, the dean of the school offering the course and submitted to the Registrar. Such a petition must include a written explanation from the instructor of the class explaining the reasons for changing the grade and a signature of support from the dean of the school offering the course.

Petitions for the change of an NC grade must be submitted during the student's term of residency at the Institute and are considered only under exceptional, extenuating circumstances.

Complaint Procedure

An individual may contact the Bureau for Private Postsecondary Education for review of a complaint. The bureau may be contacted at 2535 Capitol Oaks Drive, Suite 400, Sacramento, CA 95833, <http://www.bppe.ca.gov/>, Tel: 916.431.6924, Fax: 916.263.1897.

Academic Policies - Grading Policy

Academic Policies

Grading Policy

Grading Policy

Standard Grading Options

- **High Pass (HP):** Passing with Excellence
- **Pass (P):** Passing with Quality
- **Low Pass (LP):** Passing
- **No Credit (NC):** Work did not meet the criteria for credit.

Other Grading Options

- **Incomplete (I):**
A temporary Incomplete grade may be given to a student who has maintained satisfactory attendance and completed passing work throughout most of a course, but as a result of extenuating circumstances is unable to complete the course requirements by the end of the semester.
Incomplete grades are not assigned for Summer, Interim, Practicum, or Winter Session courses.
Incomplete grades are assigned through submission of an Incomplete Contract to the Registrar's Office. The Incomplete Contract is an explicit agreement between student and faculty of the work remaining to be completed, and the date by which the work must be submitted for final review. The contract must also be approved by the school or program responsible for the course.
Incomplete grades assigned for fall semester courses must be resolved no later than the end of the following spring semester. Incomplete grades assigned for spring courses must be resolved no later than the end of the following fall semester. Earlier deadlines for completion may be set at the discretion of the faculty and must be specified on the Incomplete Contract. Incomplete grades not replaced by final LP, P, or HP grades by the stated deadline will revert to NC (No Credit) grades on the transcript.
- **No Grade Recorded (NG):**
Placeholder grade entered by the Registrar's Office at the close of the grading period which indicates that no grade has yet been assigned by the faculty of record. "NG" grades not changed to a final evaluation by the end of the following semester will convert to "NC" on the transcript.
- **Withdrawn (W):** Grade assigned by the Registrar to indicate withdrawal from a course after the end of the add/drop period. Students may withdraw from a course without academic penalty through the 10th week of the semester. The course remains on the student's record with a "W" grade. "W" grades have no impact on semester or cumulative grading calculations, and do not count toward a student's residency or full-time status.

Auditing

Auditing a class is an arrangement made between the student and the instructor. No official record will be kept and no credit will be given.

GPA Equivalencies

On the official academic transcript, CalArts calculates student progress by indicated attempted units and the completed units, but does not use a Grade Point Average (GPA) as part of its marking system. However, when a GPA is required for external purposes, the following formula may be used: HP=4.00, P=3.00, LP=2.00, NC=0.00.

Grading Procedures

All grades are to be submitted by the faculty of record online through Self Service. Online grading opens on Monday of the final week of the semester and remains open for two weeks, until 5pm on the second Monday following the last day of the semester. The grading deadline will be published on the academic calendar for reference by faculty and students.

Grades not entered through the secure online system must be submitted through individual grade change forms that are signed by the faculty of record. This may be done through a digital form, available on HubHelper. The same process is followed to change a grade that was entered incorrectly online, or to replace temporary "I" or "NG" grades with a final evaluation.

Grading Exception for Winter Session 2025: Due to the impact of January 2025 wildfires in the LA County area, the Provost approved an adjustment to the grading policy for Winter Session 2025. All students enrolled in Winter Session 2025 courses received either a Credit (CRD), Pass (P), or High Pass (HP), depending on the grading scheme established for the course.

Academic Policies - Graduation Process: General Statement

Academic Policies

Graduation Process: General Statement

Graduation Process: General Statement

General Statement

The Board of Trustees confers all degrees and certificates awarded by the California Institute of the Arts. The President on recommendation of the Academic Council with the approval of the Provost or his/her designee and the faculties of the Institute presents candidates to the Board. Graduates are honored at an annual commencement.

Qualifications for Graduation

The faculty of the school in which the student is enrolled is responsible for determining whether the student is qualified to receive the CalArts degree or certificate. This decision requires the faculty to determine that the student has demonstrated a significant measure of artistic achievement, as well as the satisfactory completion of all residence, units and course requirements. Ordinarily, the BFA degree program and Certificate of Fine Arts program require a minimum of four years of study and 120 units of credit; the MFA degree program and Advanced Certificate of Fine Arts program require 2 to 3 years of study, or the equivalent; the MA degree is a one year full-time program of study and one year of low-residency study; the DMA degree program requires 3 years of study in residence. The certificate requires completion of the equivalent of BFA study and additional study in the metier, while excluding the Critical Studies courses needed for the BFA degree.

Process

1. **Student's responsibility:** In preparation for graduation, the student must:
 1. Consult with the mentor and the faculty of the school in which he or she is enrolled about the expected time for completing the program of studies for the degree or certificate.
 2. Pay the Student Experience' Graduation fee of \$25 to the Accounting Office.
 3. Present an application for graduation and the fee receipt to the Registrar.
 4. Complete settlement of outstanding obligations in records, accounts and property commitments with Institute offices.
 5. Complete all loan exit interviews with the Financial Aid Office and/or the Accounting Office.
 6. Complete the Graduation Exit Survey sent to each graduating student via email.
2. **Registrar's Office:**
 1. Sets deadline by which graduation reviews must be completed each semester. This date is set each semester in consultation with the Provost and the President.
 2. Prepares a tentative list of candidates for graduation to be reviewed by the schools.
 3. Notifies students of obligations to be met for the degree or certificate.
 4. Sends a list of candidates for degrees and certificates to Academic Council and deans for final action, and forwards final recommendations to the President and the Board of Trustees.
 5. Reviews all eligible students for degree completion at the close of each semester, and follows through with any pending graduates not yet completed.
3. **Deans and faculty:**
The faculty and dean of each school recommend action on each candidate for graduation and inform the Registrar's Office within the established procedures and deadlines.

Commencement Participation

CalArts celebrates degree conferrals through a yearly commencement ceremony held at the end of each spring semester. Students will be cleared to participate in the commencement ceremony following their final term in residency. In order to qualify to participate in commencement, students must be enrolled in all final course requirements, including transfer work or courses to be completed during the summer following commencement. Students will be cleared to participate in only one commencement ceremony for each degree program that they complete at CalArts.

Academic Policies - Graduation Process: Post-Residence (Delayed) Graduation

Academic Policies

Graduation Process: Post-Residence (Delayed) Graduation

Graduation Process: Post-Residence (Delayed) Graduation

Post-Residence graduation is a process initiated by the student's graduation review committee and is typically available only to MFA or DMA candidates who have completed all course and residency requirements and who have been before a Graduation Review Committee. MA students may be eligible for this option only under special circumstances. This option will be considered only when the Graduation Review Committee:

1. Is not completely satisfied with the work presented;
2. Believes the student is committed, talented and capable of achieving degree level work;
3. Does not believe that additional time spent at CalArts will contribute to the student's preparedness for the degree; and
4. Is convinced that a period of independent work may bring about the maturity lacking in the student's work.

In all cases, the review committee and the student must comply with the following conditions:

- This provision is available to degree candidates only;
- Students who have at any time been advanced in year-level will be eligible only under exceptional circumstances;
- Time between the regularly scheduled review and the post-residence review shall ordinarily not exceed one calendar year. Students who are unable to complete work during the first year must petition for additional time directly to their school dean. After five years, petitions for extension for completion of MFA degree requirements must be submitted to the Deans Council. After two years, petitions for extension for completion of DMA degree requirements must be submitted to the Deans Council.
- The graduation review committee must prepare a written statement detailing:
 1. What the student must achieve to receive the degree;
 2. How and where the post-residence review will be conducted;
 3. A proposal as to which faculty members will participate in that review, including space and facilities to be used.

A copy of the statement will be given to the student and a copy will be placed in the student's permanent academic record. The latter will be removed from the permanent record when the student passes a post-residence review and is awarded a degree.

- Where special demands are made on CalArts resources such as the use of studios and/or equipment, the Vice President and CFO shall assess the student for appropriate fees. Individual schools may place restrictions on time and access.

Academic Policies - Grievance Procedures - Student

Catalog Policies

Grievance Procedures - Student

Grievance Procedures - Student

CalArts students are given an opportunity to seek an internal resolution of conflicts and complaints. This procedure may also be used by students who believe that they have been discriminated against on the basis of race, color, national origin, disability, sex or any other classification or characteristic protected by law, and is designed to comply with Title VI of the Civil Rights Act of 1964, Title IX of the Education Amendments of 1972, and Section 504 of the Rehabilitation Act of 1973. Complaints dealing with sexual and other forms of unlawful harassment are addressed under Prohibited Discrimination, Harassment, and Sexual Misconduct Policy. Students who seek to grieve the imposition of disciplinary sanctions are directed to review the Disciplinary Policy.

Students who seek to grieve matters pertaining to academic warning, probation, suspension, and/or dismissal are directed to Metier Standing and Academic Standing policies.

The Financial Aid Appeals Committee handles grievances concerning financial aid.

Any student who believes that a practice, policy, or rule has been applied incorrectly as it relates to the student, or that he or she has been unlawfully discriminated against, is encouraged to informally discuss the problem with the Vice President for Student Experience. If the student is not able to satisfactorily resolve the problem informally, the student may initiate a formal grievance by submitting a signed grievance statement to the Vice President for Student Experience.

The grievance statement must describe the nature of the grievance; the practice, policy, rule or law that the student claims has been violated; and the remedy or relief requested. The Vice President for Student Experience or designee shall investigate the grievance and provide a written response within ten days of receipt of the grievance unless additional time is required to complete the investigation. If not satisfied with the response to the grievance, the student may, within ten days of the date of the response, file a written request for review with the Vice President for Student Experience. As soon thereafter as practical, an Appeals Committee shall be formed consisting of three current members from the faculty, staff, or student body. One member of the Committee shall be appointed by the student, one member by the Associate Provost or designee, and one member by the Vice President for Student Experience. Together these members of the Committee shall decide who from among them shall serve as chairperson. No person shall participate as a member of the Appeals Committee who has been involved in the event(s) upon which the grievance is based or who is biased.

The Director of Human Resources or designee shall provide administrative services to the Appeals Committee, including but not limited to supplying copies of pertinent documents, scheduling meetings, arranging for a scribe to take and prepare minutes, and the preparation of the final report. A student may be assisted at any stage of this procedure by a current member of the CalArts community (i.e., staff member, faculty member, or student) who is not an attorney, but such person may not address the Appeals Committee unless requested by it to do so.

Within ten days of the date the Appeals Committee is formed or as soon thereafter as practical, the Appeals Committee shall meet in closed session to consider the grievance. The members of the Appeals Committee shall respect the confidentiality of the proceedings. The student shall be provided with an opportunity to meet with the Appeals Committee, but shall otherwise be present at a meeting of the Appeals Committee only at the request or with the permission of the Appeals Committee. As it deems appropriate, the Appeals Committee shall interview other persons and shall consider written materials and other items pertinent to the grievance.

At the completion of its review, the Appeals Committee shall prepare a written advisory report consisting of findings, conclusions, and recommendations and submit it to the Provost with copies to the student and the Vice President for Student Experience. Under separate cover, the Appeals Committee shall also forward to the Provost copies of any written material or items that it considered in connection with the appeal process.

The Provost or their designee shall consider the report and, at their discretion, take whatever action they deem appropriate. Prior to taking such action, the Provost or designee may discuss the report with the members of the Appeals Committee, the student or any other person. The Provost or designee shall transmit their decision in writing to the student, Vice President for Student Experience and members of the Appeals Committee. The decision of the Provost shall be final.

Title IX Coordinators

Title IX of the Education Amendments of 1972 is a federal law that prohibits sex discrimination in education. Sex discrimination includes sexual harassment, sexual assault and sexual exploitation. CalArts' Title IX Coordinator is [Eva Graham](#), Institute Diversity Officer, and Deputy Title IX Coordinator is Jennie Watson, Senior Human Resources Officer (661-253-2637, jwatson@calarts.edu, Room A210). The Title IX Coordinator and Deputy Coordinator are available to receive reports of sex discrimination at CalArts, including sexual harassment, sexual assault, and sexual exploitation, to discuss questions or concerns relating to the investigation of complaints received, reporting and complaint procedures, and education and training opportunities across campus. Information concerning Title IX can also be obtained from the Office for Civil Rights, U.S. Department of Education (415-486-5555, <https://www.ed.gov/> 50 Beale Street, Suite 7200, San Francisco, CA 94105-1813).

Complaint Procedure

An individual may contact the Bureau for Private Postsecondary Education for review of a complaint. The bureau may be contacted at 2535 Capitol Oaks Drive, Suite 400, Sacramento, CA 95833, <http://www.bppe.ca.gov/>, Tel: 916.431.6924, Fax: 916.263.1897.

An individual who wishes to make a complaint relating to the accreditation requirements shall be referred to the [Western Association of Schools and Colleges Senior College and University Commission \(WSCUC\)](#).

Below are the Complaint Process and Complaint Form.

- [WASUC-Complaint-Process](#)
- [WSCUC Complaint Form](#)

Academic Policies - Honorary Degrees

Academic Policies

Honorary Degrees

Honorary Degree

I. Purpose

The California Institute of the Arts bestows Honorary Degrees to individuals in recognition of extraordinary achievements; to highlight the values of the Institute and the contributions that an individual makes or has made to the community or the broader society; and to provide positive acknowledgement of the importance of these contributions to the Institute, its mission, its values, and its community. The recipient shall embody the statement “Through artistic practice, we transform ourselves, each other, and the world.”

The process of selection of an Honorary Degree recipient shall reflect our values, which include agency, empathy, persistence, distinction, equity, rigor, diversity, inclusivity, social justice, openness, experimentation, critical engagement, and creative freedom.

II. Selection Criteria

The Board of Trustees seeks to highlight the broadest spectrum of achievements inclusive of all callings, careers and services which impact the Institute and more importantly the broader world whether local, regional, national or international. Affiliation with or affinity for the Institute is important, but a lack thereof shall not be a disqualifying factor in awarding an honorary degree. The following factors represent important criteria for consideration during the review of nominees for an Honorary Degree:

A. Achievements of extraordinary and lasting distinction in an activity consonant with the mission of the Institute. (examples of an ideal candidate can include one or more of the following: the advancement of learning and creation in the arts; distinguished contribution in elective or appointive office; demonstrated advocacy, leadership, or philanthropy related the Institute’s mission; or career service notable for demonstrated qualities of intellect and character)

B. Sound justification for recognition by the Institute of such achievement and distinction: either an association of the individual with the Institute, or a recognizable relationship of a nominee’s achievement to the mission of the Institute;

C. High qualities of personal and professional character and competence;

D. Appropriateness of recognition at a ceremony attended by undergraduate and advanced degree candidates reflecting a diversity of interests and concerns.

E. Current employees and Trustees are not eligible. Provided the above factors are met, a former employee or Trustee may be considered for an Honorary Degree after five years of separation from California Institute of the Arts. Alumni are always eligible.

III. Honorary Degree Types

The Institute always grants the honorary degree title of Doctor of Fine Arts, honoris causa. This designation happens regardless of an honoree’s vocation, or the nature of their accomplishments.

IV. The Institute Committee on Honorary Degrees; Membership.

The Institute Committee on Honorary Degrees (hereinafter “the Committee”) shall administer the solicitation, collection and review of nominations for Honorary Degrees. The Committee shall be chaired by the Provost. Its membership shall be appointed by the President and shall include the following: The Provost (Chair), The Senior Vice President for Advancement (Vice-Chair), three (3) faculty members recommended by the academic council, one (1) academic dean, and two (2) members selected by the President (to include, without limitation, individuals from amongst the faculty at various ranks, the Deans or other administrators, alumni, staff, Trustees, or other members of the community). All appointments should take into consideration community participation and diversity, which shall be broadly defined. Terms shall be staggered as three-year (academic year) appointments. Each member, including the Provost and Senior Vice President for Advancement, shall have one vote.

V. Procedures

The procedures for proposing and awarding Honorary Degrees are as follows:

A. The Committee shall establish its own schedule regarding the nomination and selection process, which shall be coordinated with the meeting schedule of the Board of Trustees. The solicitation for nominees for Honorary Degrees shall normally be undertaken in the fall semester of each academic year.

B. Nominations shall be solicited in writing for review by the Academic Council from all members of the campus community, including the Board of Trustees. All nominations shall be made in writing in accordance with application guidelines and shall be considered in strictest confidence. Following their review the Academic Council will pass along their recommendations to the Committee for their consideration.

C. The Committee shall establish a process to assure that nominees are thoroughly reviewed and vetted prior to the Committee making its nominations to the Academic and Campus Affairs Committee and the Board of Trustees.

D. The Committee shall present its nominations to the Academic and Campus Affairs Committee of the Board of Trustees during the fourth quarter of the current fiscal year. The Committee’s recommendation shall be presented by the Provost, acting as Chair of the Committee, shall be based on the Committee’s deliberations, and shall represent the majority consensus of the Committee. The honorary degree recipient shall be finalized by vote at the annual meeting of the full Board of Trustees.

E. The Board of Trustees shall consider only those nominations recommended by the Committee.

F. Awardees are expected to be present to receive an Honorary Degree, although it is within the Board of Trustees discretion to make an award in absentia assuming an alternate engagement plan is possible.

G. It is the goal of the Institute to present at least one Honorary Degree each year.

H. Honorary Degrees shall be awarded only at a Commencement.

I. The Committee and/or the Board of Trustees may maintain in its pool for consideration any person recommended, but not selected by the Board of Trustees, for a period of five years. Any person not selected from the pool at the conclusion of the five-year period will be ineligible for re-nomination in the following two years, unless waived by the Board of Trustees.

J. The Board of Trustees on its own motion may revoke, or the Committee may recommend to the Board of Trustees the revocation of, an Honorary Degree if there is a material change in the reputation of the honoree which would compromise the public trust, dishonor the Institute’s standards, or otherwise be contrary to the best interest of the Institute. The mere passage of time shall not be a justification for the revocation of an Honorary Degree and shall not constitute a material change in reputation. Honors should not be altered simply because later observers would have made different judgments.

VI. Nomination and Approval of Honorary Degrees by the Board of Trustees

The Board of Trustees is the final authority in granting an Honorary Degree. It may be that individuals nominated in a given year may be proposed to the Board to receive an Honorary Degree in a later academic year, depending on the total number of nominations in a given year, and other considerations.

The Honorary Degrees Committee will submit a recommendation to the Academic and Campus Affairs Committee of which nominees should receive Honorary Degrees. The Full Board of Trustees shall receive the recommendation from the Academic and Campus Affairs Committee and vote to grant final approval of Honorary Degree recipients.

The Board of Trustees may approve multiple nominees in a given year with the understanding that, due to scheduling and logistics, an individual nominee may receive the award that year or in a subsequent year's commencement. Only another vote of the Board of Trustees can rescind the Board's approval for an Honorary Doctorate after it has been made.

Upon final action by the Board of Trustees, the President or designee shall notify the awardee(s) of their selection. In the event of the death of a nominee after the Board of Trustees has given final approval of the award, a posthumous award of the Honorary Degree may be bestowed by the Institute. If appropriate, a designee may represent the recipient at the award ceremony.

Academic Policies - Independent Study

Academic Policies

Independent Study

Independent Study

CalArts approves of Independent Project/Private Directed Study for credit in the artistic disciplines and the School of Critical Studies when the study or project undertaken represents an opportunity of unique value to the student in his or her area of study.

The Institute defines Independent Project/Private Directed Study as on-campus studio or academic work undertaken outside of Institute-scheduled lecture or studio class time and under the direct supervision of a faculty member of the Institute.

Independent Project/Private Directed Study may be undertaken in any area of valid artistic/academic interest to the student, with any faculty whose education and expertise qualify them in that area and whose teaching and mentoring schedule allows time for the supervision of the project/study.

Independent Project/Private Directed Study may be undertaken as an adjunct to the student's coursework in a program; it may satisfy specific divisional or programmatic requirements; or it may constitute the student's entire program of study during a given semester.

Details:

The student and the chosen faculty supervisor complete an Independent Project/Private Directed Study Contract, clearly defining what is to be accomplished during the period of study. The contract must be approved and signed by the student, the faculty supervisor, the metier dean and the dean of the faculty supervisor's school.

The credit value of the independent study will be determined and assigned by the faculty supervisor at the time the contract is written and signed as follows:

Lecture Course: One contact hour plus two hours of out of class preparation.

Studio Course: Two contact hours plus one hour of out of class preparation.

Individual Lessons: One hour of contact with at least two hours of practice.

Independent Study: At least three hours of work per week.

The approved and signed contract indicating the Independent Project/Private Directed Study's credit value must be presented at the time the student registers for the course. The original will be kept in the Registrar's Office and a copy will be sent to the faculty supervisor with the class roster.

Academic Policies - Institute Degree and Certificate Requirements: Advanced Certificate of Fine Arts

Academic Policies

Institute Degree and Certificate Requirements: Advanced Certificate of Fine Arts

Institute Degree and Certificate Requirements: Advanced Certificate of Fine Arts

CalArts has developed the following minimum standards for receiving a degree or certificate from the Institute. Schools may develop additional requirements on approval of the President and Provost.

The schools may admit candidates at the graduate level for an Advanced Certificate of Fine Arts when an undergraduate degree has not been earned but where evidence of achievement and capability would otherwise justify admission for regular MFA study. The work completed for this program must be on the same level as that required for the MFA degree.

The time to be spent in the program is the same as that for the MFA degree. Admission, units completion and review procedures, including the requirements for meeting the TOEFL standards in the case of international applicants, are the same as those for the MFA degree.

Academic Policies - Institute Degree and Certificate Requirements: Bachelor of Fine Arts (BFA)

Academic Policies

Institute Degree and Certificate Requirements: Bachelor of Fine Arts (BFA)

Institute Degree and Certificate Requirements: Bachelor of Fine Arts (BFA)

CalArts has developed the following minimum standards for receiving a degree or certificate from the Institute. Schools may develop additional requirements on approval of the President and Provost.

I. Bachelor of Fine Arts Degree (BFA) Residency Requirement

The CalArts Bachelor of Fine Arts degree is a minimum 120 unit, 8 full-time semesters program.* A minimum of one year in residence must be completed and of this minimum at least the final semester before graduation must be in residence. Schools may establish slightly different criteria for the residency requirements under exceptional circumstances and on approval of the Provost or his/her designee.

Curriculum Requirements

1. Each student must complete the curriculum set forth by the school in which the student is enrolled.
2. BFA candidates must complete 46 semester units in Critical Studies course work. First year BFA candidates will generally take two Critical Studies courses each semester, for a total of five semester units per semester. In subsequent years students take two to three courses or six units each semester until the requirement is completed. For the required distribution of these courses consult the Critical Studies section of this Course Catalog. Critical Studies courses may not be repeated for purposes of satisfying this requirement unless otherwise stated in the course description.

Transfer Credit

Transfer credit is accepted only from other regionally accredited postsecondary institutions. Transfer credit is granted only for courses that are relevant to study at CalArts and for which an equivalent grade of "A", "B", "C", or "P" was received. The final semester of any CalArts degree or certificate program must be completed in residence i.e., as a registered student. Under specific circumstances a student who has fulfilled all residence requirements, and has passed a faculty graduation review but who falls short on units or course requirements by no more than one course, not to exceed three units, may take advantage of the following policy.

The student may petition through:

- The School Dean in the case of a Metier requirement or,
- The Dean of the School of Critical Studies in the case of a BFA Critical Studies requirement to:
 1. Complete coursework, as approved in writing, at another regionally accredited college to serve as transfer credit in fulfilling the outstanding course. This coursework must be completed with a "C" or better or "P". Students tentatively scheduled to graduate in May can make up the course during the summer after graduation or during the following fall semester only. Students tentatively scheduled to graduate in December can make up the course during the following spring semester or summer following graduation only. Approval of the appropriate Dean must be obtained prior to enrollment for the coursework. Upon completion of the coursework an official transcript must be sent to the CalArts Registrar for transfer toward the CalArts degree.
 2. Return to CalArts during the following fall semester for tentative May graduates or the following spring semester for December tentative graduates. Tuition will be charged on a per-unit basis, calculated at the current annual tuition divided by 40 (the annual number of allowable units). Approval for return to complete the course must be presented to the CalArts Registrar no later than the last day of late registration of the semester of intended enrollment. Forms for approval of either of these options may be obtained in the Registrar's Office.

Post-Residence Transfer Credit

This policy defines the number and conditions under which students may transfer external credits to CalArts as pending graduates. All proposed transfer credits must be approved **in advance and in writing** by the dean (metier or Critical Studies) in consultation with the student's mentor, and by the Registrar. Please note that prior to receiving pre-approval from the Dean and Registrar, the following conditions must be met:

- The student must have fulfilled all metier and Critical Studies residency requirements. (*Please see the policy titled "Institute Degree and Certificate Requirements: Residency Requirement."*)
- The student must have advanced to the final semester of residence for his/her program (e.g., BFA4-2).
- The student has successfully passed his/her graduation review or recital. If s/he has not done so, formal, written arrangements for completing this requirement, approved by the mentor, Program Director and Dean, must have been made (as articulated in the Special Conditions section of the Transfer Credit Approval Form).

The student *must* receive the Dean's and Registrar's permission prior to enrolling in any coursework at another regionally accredited institution. If the above conditions are met **and** the student has received pre-approval from both the appropriate dean and the Registrar, then the student may transfer to CalArts a maximum of five (5) units of credit from another regionally accredited institution. As stated in the policy titled "*Institute Degree and Certificate Requirements: Transfer Credit*," coursework must be completed with a grade of "C" or better or a grade of "Pass."

These additional units will be accepted without incurring additional fees, if they are completed within two (2) years after the final semester of residency. If more than two years have elapsed since the end of the final semester of residency, then the student must apply for readmission in order to complete the required units at CalArts.

A student can also complete his/her remaining units at CalArts, either during the academic year at a per-unit cost or during Summer Session. Students who need six or more units to graduate must enroll in the Institute (half-time or more, based on the remaining requirements).

Transfer Credit (BFA), For Purposes of Admission

Students with previous bachelors degrees who are entering the BFA program will be required to complete at least 8 semester units of CalArts Critical Studies credit in order to obtain a BFA degree from CalArts. All other students will be required to complete at least 8 of the required 46 semester units of Critical Studies credit at CalArts. When transfer students seek credit toward the Critical Studies requirement, this credit will be measured against the CalArts component—46 semester units in approved Critical Studies course work to a maximum of 38 semester units. (See School of Critical Studies section for specific requirements.) All transfer credit will be evaluated by the Registrar's Office in accord with guidelines developed by the School of Critical Studies and consistent with the Institute's standards.

* Residency Requirement Exception for Academic Year 2020-2021: Given the COVID-19 pandemic is an exceptional circumstance, the Provost has approved a residency exception for Fall 2020. For students who opt to enroll part-time for Fall 2020, their degree length will not be extended solely for the purposes of fulfilling residency. Students will still need to complete all other requirements of the degree.

Academic Policies - Institute Degree and Certificate Requirements: Certificate of Fine Arts

Academic Policies

Institute Degree and Certificate Requirements: Certificate of Fine Arts

CalArts has developed the following minimum standards for receiving a degree or certificate from the Institute. Schools may develop additional requirements on approval of the President and Provost.

Definition

The Institute offers a four year (eight full-time semesters), minimum 120 unit Certificate of Fine Arts program which is representative of achievement in a school for students who do not wish to pursue the BFA degree. Following are the standards:

1. Admission requirements, residency, units completion and other Institute standards relating to advancement, review and graduation are the same as for BFA candidates.
2. The student must satisfactorily complete all metier work required for the BFA degree in the school in which the student is enrolled, plus additional metier studies as determined by the mentor and dean.
3. Critical Studies course work is not required and is replaced by additional work in the metier.
4. Tuition and related fees are the same as those for the BFA degree.
5. Financial aid may be available for a period up to six years (12 semesters).

Transfer from Certificate Program to BFA Degree:

Certificate students may transfer to BFA study under the following conditions:

1. After one or more semesters in residence;
2. Upon a favorable recommendation from the school review committee;

Process: The student must complete a Change of Status form. This form requires approval of the mentor, the dean, the Dean of Critical Studies, the Director of Financial Aid and the Registrar. A student who has graduated from CalArts with a Certificate and who later wishes to apply that Certificate to the BFA degree from the same school must go through the admission process and be formally accepted for BFA study and must complete all requirements remaining, both in the metier and Critical Studies. If the time away from CalArts exceeds five years, the student will be subject to the academic requirements of their program and the Institute in effect at the time of return.

Transfer (Voluntary) from BFA to Certificate Program:

A BFA student may transfer to the Certificate program provided the student has been in residence one or more semesters and has the written approval of the dean and mentor.

Process: The student must complete a Change of Status form. This form requires the signature of the mentor, the dean, the Dean of the School of Critical Studies, the Director of Financial Aid and the Registrar.

Academic Policies - Institute Degree and Certificate Requirements: Doctor of Musical Arts Degree (DMA)

Academic Policies

Institute Degree and Certificate Requirements: Doctor of Musical Arts Degree (DMA)

Institute Degree and Certificate Requirements: Doctor of Musical Arts Degree (DMA)

CalArts has developed the following minimum standards for receiving a degree or certificate from the Institute. Schools may develop additional requirements on approval of the President and Provost.

Admission Prerequisites

Applicants to the DMA program will be required to have attained a MM, MFA, MA or equivalent in a relevant field before admittance, or to have a Master's degree in an alternate subject along with skills and knowledge that are commensurate with a Master's degree in a music field. Students will be required to have maintained a minimum GPA of 3.0 in previous graduate study. As part of the admission process, applicants' knowledge of music theory, analysis and history will be assessed through portfolio review and interview. Additional subject areas may be assessed depending on each applicant's proposed research focus. In order to ameliorate any deficiencies thus identified, admitted students may be required to take courses for which credit will not be awarded in addition to those required for the DMA degree.

Residence Requirements and Length of Program

The DMA program requires at least 6 semesters of full-time residence, which is also its expected duration.

Curriculum Requirements

The DMA program is a 60 semester-unit program. A complete description of the requirements of the DMA program can be found in the School of Music section of this Course Catalog. Candidates for the DMA degree are required to complete all of the work defined by the DMA program and the School of Music.

Transfer Credit

Due to the unique nature of the DMA program, transfer credit is not awarded.

Academic Policies - Institute Degree and Certificate Requirements: MA in Aesthetics and Politics

Academic Policies

Institute Degree and Certificate Requirements: MA in Aesthetics and Politics

Institute Degree and Certificate Requirements: MA in Aesthetics and Politics

CalArts has developed the following minimum standards for receiving a degree or certificate from the Institute. Schools may develop additional requirements on approval of the President and Provost.

Admission Prerequisite

An undergraduate degree from a regionally accredited postsecondary institution or a government approved foreign institution is required for admission to the MA in Aesthetics and Politics program.

Residence Requirements

The MA in Aesthetics and Politics Program requires two semesters of full-time residency and two semesters of low-residency enrollment.

Curriculum Requirements

Candidates for the MA in Aesthetics and Politics are called upon to complete all of the work defined by the program. These requirements are described annually in the Course Catalog.

Thesis Completion

The thesis for MA in Aesthetics and Politics candidates will be due by September 1st of the fall semester following the final semester of enrollment, i.e., students completing coursework in spring 2017 will have a thesis due date of September 1, 2017. Students who do not complete the thesis by September 1st will be required to pay a matriculation fee in order to maintain status as a candidate for graduation up to a maximum of two additional semesters as set by the Program Director. Students who do not complete their thesis within the maximum two additional semesters will not be eligible for graduation and will be required to reapply to the program and complete course work and a thesis as arranged with the Program Director.

Academic Policies - Institute Degree and Certificate Requirements: Master of Fine Arts Degree (MFA)

Academic Policies

Institute Degree and Certificate Requirements: Master of Fine Arts Degree (MFA)

Institute Degree and Certificate Requirements: Master of Fine Arts Degree (MFA)

CalArts has developed the following minimum standards for receiving a degree or certificate from the Institute. Schools may develop additional requirements on approval of the President and Provost.

Admission Prerequisite

An undergraduate degree from a regionally accredited postsecondary institution or a government approved foreign institution is required for admission to the MFA degree programs.

Length of Program

The MFA degree program requires from two to three years to complete, depending upon the requirements of the individual disciplines. The requirements of the individual disciplines are found in the individual school degree requirements sections of this Course Catalog and in the Admissions Viewbook.

Residence Requirements

Depending on the program of study, a minimum of one year to three years in residence is required and, regardless of the minimum requirement, the final semester before graduation must be in residence i.e., as a registered student.

Schools may establish slightly different criteria for the residency requirements under exceptional circumstances and with the approval of the Provost*.

Curriculum Requirements

Candidates for the MFA degree are called upon to complete all of the work defined by the program and school in which the student is enrolled. These requirements are described annually in the Course Catalog and may be clarified in the school handbooks.

Transfer Credit (MFA)

Up to one year of graduate credit may be granted for work completed at a regionally accredited postsecondary institution prior to admission to CalArts' MFA study. Such transfer of credit is at the discretion of the dean of the student's school. Full documentation, including official transcripts, will be required.

* Residency Requirement Exception for Academic Year 2020-2021: Given the COVID-19 pandemic is an exceptional circumstance, the Provost has approved a residency exception for Fall 2020. For students who opt to enroll part-time for Fall 2020, their degree length will not be extended solely for the purposes of fulfilling residency. Students will still need to complete all other requirements of the degree.

Academic Policies - Internships

Academic Policies

Internships

Internships

All students interested in pursuing an internship opportunity must schedule an appointment with the Center for Life & Work in the Office of Student Experience. Although the Center for Life & Work maintains an extensive bank of internship opportunities, students may also find internships through their own research or through faculty contacts. However, regardless of the internship's origin, all internships must be approved by the Center for Life & Work. No credit will be awarded for internships not approved in advance of their start date, except by special petition of the School dean.

To be eligible for an internship, BFA candidates must have spent at least two semesters on campus, as a registered student. MFA, and DMA candidates must have been enrolled for at least one semester. On occasion, exceptions may be granted at the discretion of the School dean. Credit for undergraduate internships may not exceed six semester units or twenty hours of work per week. Please note that an off-campus internship may augment, but may not replace, the CalArts residency requirement.

Generally, an internship experience at a particular site can only be done for credit one time. If the duties and responsibilities of the internship change significantly, then the student may apply to the Center for Life & Work to receive credit at the same site a second time. The maximum number of academic credits for internships each semester is 6.

At no time can an internship count towards fulfilling Critical Studies course requirements.

The Center for Life & Work will supply the student with a copy of the internship contract. The contract must be completed in its entirety before the beginning of the internship and must be signed by the internship company, the CalArts faculty member supervising the internship, the Center for Life & Work, and the Registrar's Office. International students must have written approval of the Office of International Students and Programs prior to beginning an internship.

A member of the faculty must supervise all internships. If the host company requires a separate contract to be signed by the intern, or, if the host wishes to acquire original material created by the student, the student should seek independent legal advice prior to entering into any agreement with the company. Although a student interning for credit can also be paid by the host organization, the position must meet the criteria of an intern/trainee and not an employee. See the Center for Life & Work for more information.

The faculty supervisor is responsible for the following:

- Reviewing the value of the internship in the context of the student's overall academic/artistic program (including any academic warnings) before approving the internship, and ensuring that there are defined learning outcomes for the internship experience;
- Ensuring that credit awarded is consistent with semester credit hour standards (three hours per week per unit for undergraduate students and four hours of work per week per unit for graduate students based on a 15-week semester);
- Reviewing the evaluations, provided by the student and by the work site, in preparation for issuing a grade based on performance to be submitted to the Registrar's Office; and
- Reporting any problems or feedback to the Center for Life & Work.

Students are responsible for the following:

- Meeting with the Center for Life & Work and understanding the procedure for securing an internship;
- Making sure that a completed and signed internship contract is submitted to the Center for Life & Work prior to starting the internship;
- Fulfilling all requirements of the internship;
- Keeping the faculty supervisor apprised of any problems that arise in the course of the internship, as well as periodically reporting on progress at the work site; and
- Submitting, to the Center for Life & Work, complete reports on evaluation forms (provided by the Center for Life & Work) by both the intern and the internship site supervisor before the end of the semester. Grades are based, in part, on these completed reports.

Internships at CalArts that are awarded academic credit are treated with the same rigor as coursework. Students are expected to commit the same amount of time and energy to an internship as they would to a class. In turn, the Center for Life & Work and the supervising faculty member will help ensure that the student's investment is matched by a valuable educational experience. Regular communication among the Center for Life & Work, the faculty member and the student is crucial to this process.

Academic Policies - InterSchool Policy

Academic Policies

InterSchool Policy

InterSchool Policy

Overview

InterSchool Degree Programs provide students with the opportunity to pursue one joint degree from two different CalArts Schools (e.g., a BFA degree jointly awarded by the Schools of Art and Film/Video).

Structure: CalArts' InterSchool option is structurally similar to a "double-major"; however, InterSchool students are expected to use and explore the integration of both artistic disciplines in their practice and final projects. InterSchool Degree Programs are possible only between programs within the same degree level and type (for example, both are MFA programs).

Eligibility: Applicants to an InterSchool Degree Program must (1) meet admission criteria for both courses of study; (2) show that their artistic work would benefit substantially from two areas of study; and (3) demonstrate that they have the artistic and academic capacity to complete two programs. InterSchool Degree Programs are not available with the Master of Arts in Aesthetics in Politics or the Doctor in Musical Arts Program in Performer/Composer.

Length: Acceptance and enrollment into most InterSchool Programs will increase by *at least* one semester the degree time to completion. Time to completion will be estimated during the application process, through the proposal of a specific combination of curricula. For InterSchool Degree Programs, the *minimum* residency is the length of the longest Program. For example, if a student is enrolled in a three-year Theater MFA, and becomes an InterSchool student with a two-year MFA Program in Writing, the minimum residency requirement will be three years, although students may anticipate adding time-to-degree beyond this minimum.

Requirements: InterSchool Degree Programs' requirements vary based on the participating Programs' curricula and degree type. National and regional accreditation standards for each Program must be fulfilled in their entirety. InterSchool students, regardless of degree type, must demonstrate all skills and competencies for graduation in both Programs and make good progress in all coursework and review processes, as determined by the faculty.

Requirements for Undergraduate Students: All undergraduate students enrolled in InterSchool Programs must complete – at minimum – all required third and fourth year courses as listed in the *Course Catalog* (minus any electives that may be taken in the other Program) and any additional coursework deemed necessary by the Program Directors and mentors to meet graduation requirements. Curricula for the Schools of Art and Dance are designed in compliance with national accreditation standards and must be completed in their entirety, as listed in the *Course Catalog*. Some of the first and second-year requirements may be waived during the admissions process, when students have regionally accredited transfer credits that qualify them for admission at a higher year-level and demonstrate the level of artistic accomplishment commensurate with that year-level. InterSchool undergraduates students must successfully complete all Critical Studies requirements (46 units) and are expected at all times to maintain good progress in Critical Studies and all coursework for both artistic programs.

Requirements for Graduate Students: Graduate students enrolled in MFA InterSchool Programs must complete all core curricula for both programs, minus any electives or graduate transfer credit considered during the admissions process for the purpose of year-level placement.

Application Process: New Students

New Undergraduate Students: New BFA students are not eligible to apply for an InterSchool Program. Faculty wish to see the quality and direction of students' work prior to considering them for InterSchool study.

New Graduate Students: Potential MFA students may apply for admission to the InterSchool Program. Successful applicants will exhibit extraordinary strength and ability in the two disciplines of choice, with portfolio/performance work that demonstrates the ability to successfully pursue a rigorous interdisciplinary arts study. New MFA students applying for InterSchool must meet all established Institute application deadlines for both Programs and be admitted into both Programs.

Application Process

1. **Admissions Counselors Consultation:** Before being admitted, students should discuss ideas for combining MFA programs with the Admissions Counselors from both disciplines.
2. **Associate Provost Consultation:** After speaking with student's Admissions Counselors and receiving admission to both programs, the student should make an appointment with the Associate Provost to obtain and discuss the InterSchool Approval Form and InterSchool Proposal process.
3. **InterSchool Proposal:** The student will develop an InterSchool Proposal (2-3 pages) that contains the following elements:
 1. A description of why it is important to the student's development as an artist to pursue the InterSchool Degree option.
 2. A detailed description of the course of study to be followed, developed in consultation with the student's mentors and the Associate Provost. This should include a semester-by-semester list of courses-to-be-taken (including independent studies courses), and must include all required courses for both Programs. **Proposed course-loads may not exceed 20-units per semester.** For most Programs, an average course-load of 15-units per semester is recommended. The proposed course of study must be approved by the Directors and Deans of both Programs and must conform to all national and regionally accreditation standards.
 3. A list of requested facilities and equipment necessary for the student's work from each School, including personal studio, exhibition and performance spaces, as applicable.
 4. A description of the final thesis project(s) to be completed. If the student anticipates completing one thesis project for both Programs, s/he should describe this plan in detail.
 5. A time frame in which all the work is to be completed, including a target graduation date that is to be aligned with the courses to be taken.
 6. The name of the requested mentors (if known) within each of the involved Schools.
4. **School Reviews:** The Provost Office will present the InterSchool Proposal, along with the InterSchool Approval Form, to the Program Directors of both Schools, who will review the InterSchool Proposal with the student's requested mentors and deans.
 1. If the InterSchool Proposal is approved, the InterSchool Approval Form is signed by both mentors, Program Directors and Deans.
 2. Each InterSchool Approval Form must have all six signatures (two Deans, two Program Directors and two mentors) for the application to move forward.
5. **Provost Review:** The InterSchool Approval Form, along with the student's InterSchool Proposal, will then be submitted to the Office of the Provost for final signature.
 1. Students are encouraged to keep a copy of the InterSchool Proposal and the fully signed InterSchool Approval Form for their records.
6. **Decision:** The Office of Admissions will issue an official decision letter on behalf of the Institute.

Application Process: Continuing Students

Admission to InterSchool Degree Programs is highly competitive. Each Program generally accepts a *maximum* of two InterSchool students per year. Applicants must be students in good academic standing, with the demonstrated ability to complete an intense course of interdisciplinary study. Due to the rigors of completing core requirements in two distinct Programs, applicants must also have ability and previous training in both of the disciplines.

Timeline: InterSchool applications must be completed by the institutional deadline for admission (usually early January, please see the CalArts website for the current deadline). The application process, from initial discussion with the current mentor/Program Director, to the issuance of a final letter of decision, takes four to six weeks. Therefore, it is highly recommended that students begin the InterSchool application process no later than November 1 of the academic year prior to when the InterSchool Degree Program would begin. It is the applicant's responsibility to begin the process early and to track the progress of his/her forms and proposals to ensure timely submission of all materials by the established deadlines.

Timeline for Continuing Undergraduate Students: BFA applicants generally begin the application process for InterSchool during the fall of their second year (BFA-2). Those accepted will begin their InterSchool Program in the fall semester of their third year (BFA-3).

Timeline for Continuing Graduate Students: MFA applicants should apply for InterSchool during the fall of their first year (MFA-1). Those accepted will begin their InterSchool Program in the following fall semester at the MFA-2 year level.

Application Process:

1. **Current Program Consultation:** Students should first meet with their current mentor and Program Director, who will advise the student, informally, on the feasibility of an InterSchool course of study, based on the student's current curriculum, preliminary plan for InterSchool study, and current performance in his/her existing program.
2. **Associate Provost Consultation:** After this preliminary consultation and with the approval of their mentor and Program Director, students should make an appointment with the Associate Provost to obtain and discuss the InterSchool Application Form and application process. **Current and Second Program Consultation:** After consultation with the Associate Provost, the Provost's Office will schedule an initial meeting with both Program Directors, the student's mentor and the student.
3. **Current and Second Program Consultation:** After consultation with the Associate Provost, the Provost's Office will schedule an initial meeting with both Program Directors, the student's mentor and the student.
4. **InterSchool Proposal:** Based on this meeting and with the conditional encouragement of the Programs, the student will develop an InterSchool Proposal (2-3 pages) that contains the following elements:
 1. A description of why it is important to the student's development as an artist to pursue the InterSchool Degree option.
 2. A detailed description of the course of study to be followed, developed in consultation with the Program Directors of each Program. This should include a semester-by-semester list of courses-to-be-taken (including independent studies courses), and must include all required courses for both Programs. **Proposed course-loads may not exceed 20-units per semester.** For most Programs, an average course-load of 15-units per semester is recommended. The proposed course of study must be approved by the Directors and Deans of both Programs and must conform to all national and regionally accreditation standards.

3. A list of requested facilities and equipment necessary for the student's work from each School, including personal studio, exhibition and performance spaces, as applicable.
4. A description of the final thesis project(s) to be completed. If the student anticipates completing one thesis project for both Programs, s/he should describe this plan in detail.
5. A time frame in which all the work is to be completed, including a target graduation date that is to be aligned with the courses to be taken.
6. The name of the requested mentors (if known) within each of the involved Schools.
5. **Current School Review:** The student presents the InterSchool Proposal, along with the InterSchool Application Form, to the Program Director of the student's current School, who will review the InterSchool Proposal with the student's mentor and dean.
 1. The current School may request a portfolio or audition from the applicant to determine his/her readiness to pursue InterSchool study or decline the InterSchool Proposal on the basis of the student's artistic/academic progress.
 2. If the InterSchool Proposal is approved, the InterSchool Application Form is signed by the mentor, Program Director and Dean.
6. **Second School Review:** Once approved by the current School, the InterSchool Proposal and InterSchool Application Form will be forwarded to the Program Director of the second School for consideration.
 1. At this stage of the process, the Program Director of the second School, in consultation with the Dean and the School Admissions Counselor, may waive or require an admissions portfolio or audition.
 2. If the student is accepted for InterSchool study, the InterSchool Application Form is then signed by the second School's mentor, Program Director and Dean.
 3. Each InterSchool Application Form must have all six signatures (two Deans, two Program Directors and two mentors) for the application to move forward
7. **Provost Review:** The InterSchool Application Form, along with the student's InterSchool Proposal, will then be submitted to the Office of the Provost for final signature.
 1. Students are encouraged to keep a copy of the InterSchool Proposal and the fully signed InterSchool Application Form for their records.
8. **Decision:** The Office of Admissions will issue an official decision letter on behalf of the Institute.

Financial Aid: Continuing Students

CalArts makes every effort to maintain a student's financial aid funding throughout their time here. In order to maintain consistent funding, students must maintain satisfactory academic progress and meet Institute deadlines, including FAFSA deadlines, and remain financially eligible for aid. If all deadlines and criteria are met and academic progress is satisfactory, students may assume that InterSchool status will not alter their overall financial aid package. Students should also note that their current level of aid will generally not increase with the addition of the second Program, even though the time to degree will likely increase. As a result of, Students should note that, due to the extra semester(s) required to complete coursework for both Programs, the total cost of tuition to degree generally will be more than the cost of a single-focus degree Program.

Academic Policies - Late Registration

Catalog Policies

Late Registration

Late Registration

Registration means the payment of tuition and completion of registration forms.

Late registration is a grace period of several days in which these forms may be filled out and tuition paid. An additional fee is charged for this service.

Academic Policies - Leave of Absence

Academic Policies

Leave of Absence

Leave of Absence

Students who wish to temporarily discontinue their enrollment at CalArts must request a [Leave of Absence](#) through the Office of the Registrar or through the Office of Student Experience, depending on the circumstances of the leave. Students who receive financial aid must also meet with the Office of Financial Aid to learn whether there are consequences of a leave on their financial aid eligibility or loan repayment, and international students must meet with the Office of International Students and Programs to ensure compliance with their visa status. Tuition refunds for a semester in progress are granted according to the Withdrawal from the Institute and Dormitory – Refunds policy in the CalArts Catalog.

Students placed on academic or métier warning or probation are eligible to apply for a leave of absence, but their academic status will remain in effect upon their resumption of studies at the Institute.

CalArts allows for leaves of absence in the following categories: Personal Leaves, Medical Leaves, and Institute-Initiated Leaves.

Personal Leave

A personal leave of absence enables students to work, to travel, to pursue an interest not involving formal studies, or to handle personal or family issues. Depending on School policy, students may request a personal leave for either one semester or one academic year. Students who are approved for a one semester leave may request to extend the leave to a full academic year; these requests must be received prior to the start of the second semester of the leave.

To request a personal leave of absence, students must submit a completed Leave of Absence form to the Office of the Registrar. Approval of any personal leave of absence is at the discretion of students' Dean and faculty.

At the end of a personal leave, students may re-enroll for the semester indicated on the Leave of Absence form without being required to complete any re-enrollment or

readmission paperwork. Students who do not return as expected will be withdrawn from the Institute and subject to the terms of the Withdrawal from the Institute policy.

Students approved for personal leaves of absence during the Add/Drop period will have all in progress courses dropped from their transcript. Students approved for personal leaves during the Withdrawal period will be assigned "W" notations for all in progress courses. A personal leave of absence will not be approved after the Withdrawal period has ended.

Medical Leave

Students may be granted a medical leave of absence from the Institute in those instances in which the student's health is impeding normal academic or artistic progress. A medical leave may be approved for up to one full academic year. If medically necessary, students may request to extend a medical leave for up to one additional academic year. Approval of requests to extend medical leaves beyond one year is made at the discretion of the school, in consultation with the Associate Vice President of Student Affairs, Health & Wellness and in consideration of the physical demands of the student's program.

To apply for a medical leave, students must complete the Leave of Absence form and provide documentation of the need for medical leave from their treating licensed and relevant non-familial health care professional within 30 days of declaring a leave. Approval of the leave is at the discretion of the Associate Vice President of Student Affairs, Health & Wellness (or designee). In cases where a medical leave is denied, or appropriate documentation is not provided, the leave will be processed as a personal leave of absence and will be subject to the Personal Leave policy detailed above.

Upon receiving documentation for a medical leave, the Associate Vice President of Student Affairs, Health & Wellness (or designee) will provide a decision to approve or deny the medical leave in writing. If the leave is approved, Student Experience will provide further written communication to the student documenting the reason for the leave, the conditions that must be met to return from medical leave, and the process by which the student will request to return. Prior to re-enrolling, all students on medical leaves will be required to submit medical clearance from their treating licensed and relevant non-familial health care professional stating that, in their professional opinion, the student is now capable of handling the academic and artistic demands of the Institute. Student Experience will also communicate approved medical leave status to the Office of the Registrar.

Students approved for medical leaves taking effect during the Add/Drop period will have all in progress courses dropped from the transcript. Students approved for medical leaves taking effect during the Withdrawal period will be assigned "W" notations for all in progress courses. In rare cases, and at the discretion of the Associate Vice President of Student Affairs, Health & Wellness (or designee) in consultation with the Registrar, students may be approved for medical leaves taking effect after the end of the Withdrawal period. Requests for late semester medical leaves will not be considered after the last day of the semester.

Students approved for medical leave will have an administrative hold placed on their registration record to prevent re-enrollment without clearance from Student Experience. Students intending to return from a medical leave must submit clearance documentation to the Associate Vice President of Student Affairs, Health & Wellness (or designee) no less than one month prior to the start of the semester in which the student intends to re-enroll. The Associate Vice President of Student Affairs, Health & Wellness (or designee) will consider students' requests based on a review of the entire record, including any new information relevant to the matter, and may impose conditions on students' re-enrollment.

Institute-Initiated Leave

Students are subject to Institute-initiated leave if the Vice President for Student Experience (or designee), in consultation with the School Dean, is persuaded by the evidence that they exhibit behavior which substantially disrupts or impedes the educational process or proper activities or functions of the Institute. Students may also be placed on institute-initiated leave pending the outcome of a disciplinary investigation if the evidence indicates that they pose a direct threat to the health or safety of others.

In the case of Institute-initiated leave, the Vice President for Student Experience (or designee), in consultation with the School Dean, may state a specific date after which students may seek to re-enroll, and may also stipulate conditions that must be met before students may re-enroll, including but not limited to a requirement that students provide medical clearance from their treating licensed and relevant non-familial health care professional. Student Experience will communicate this decision to the Office of the Registrar.

Unless otherwise specified by the Vice President for Student Experience (or designee), any decision to place a student on involuntarily leave will take immediate effect. However, this decision is subject to automatic review within seven days by the Provost (or designee), including the Institute Diversity Officer. Should students choose to challenge the institute-initiated medical leave decision, they may do so through the student Grievance Procedure, but the initiation of a grievance will not delay the effective date of the leave.

Absence without Leave

Students who discontinue enrollment for a single academic semester (fall or spring) at CalArts without following the leave of absence procedures described above will be withdrawn from the Institute and, in accordance with the Withdrawal from the Institute policy, will be required to reapply to the Institute if they wish to return. Schools and programs are not required to approved readmission of withdrawn students, and all readmitted students will be subject to current policies governing degree requirements and catalog rights.

Academic Policies - Mentoring Policy

Academic Policies

Mentoring Policy

Mentoring Policy

Each student entering the Institute is assigned a faculty mentor from the School in which the student enrolls. The mentor plays a key role in advising and guiding the student in achieving artistic and educational goals. The mentor monitors each mentee's progress toward fulfillment of program requirements.

In carrying out these responsibilities:

1. The mentor meets with the student at each class sign-up to approve a program of study, helping to ensure that the degree or certificate requirements and other standards of the Institute are being met in the métier.
2. The mentor attends and approves the outcome of all reviews of his/her mentees, evaluates student exchange participation, monitors internship experience, recommends and approves adjustments to year level and meets with the student, at the student's request, during the semester. It is highly recommended that mentors make an effort to meet with mentees at least once each semester.
3. Toward the end of each spring semester, the mentor prepares the Mentor's Report (Fall for December Graduates) for each mentee. These reports are done online and describes the student's development and progress in the program and become part of the student's electronic academic record.

These reports are available to the student online. The Mentor's Report may include information about the student's advancement in year level, Critical Studies maintenance of effort (BFA students), completion of the course work of each semester, as well as an overall assessment of the student's activities in the metier. It is prepared online by the mentor each year, is subject to the dean's review and is submitted online via the Faculty Academic Services website no later than the third Thursday after graduation day of the academic year.

Each school may develop other requirements and mentoring procedures supplementary to those listed above. Students may request a change of mentor by completing a Change of Status form, available in their School office or in the Office of the Registrar (requires the signature of the dean, prior mentor, requested mentor, and Registrar).

Academic Policies - Missing Persons Policy

Catalog Policies

Missing Persons Policy

Missing Persons Policy

Students living on-campus

A suspected missing student should be reported to the campus safety department immediately. In compliance with federal laws, if after investigation the student is determined to be a missing person, the appropriate law enforcement agencies and the student's emergency contact will be notified within 24 hours. If a student is under the age of 18, California Institute of the Arts is required to contact a parent or guardian. If a student is over the age of 18, California Institutes of the Arts is required to contact the emergency contact identified by the student to the institute.

Students living off-campus

A suspected missing student should be reported to campus safety immediately. If after investigation the student is determined to be a missing person, the appropriate law enforcement agencies will be contacted within 24 hours.

Academic Policies - Part-Time Study

Academic Policies

Part-Time Study

Part-Time Study

CalArts does not encourage part-time registration in general as all of the Institute's programs are designed to be completed over the course of two to four years of full-time work.

Under special circumstances, students who have completed at least one full-time semester in residence in the School of Art or the Design and Production program of the School of Theater may be approved for part-time registration by the dean of that school.

The schools of Film & Video*, Dance, and the Acting and Directing programs of the School of Theater do not accept part-time enrollment.

The schools of Music and Critical Studies will consider applications for part-time registration on a case-by-case basis. DMA and MA students are not eligible for part-time study.

International students, by mandate of the Bureau of Citizenship and Immigration Services are not permitted to attend on a part-time basis except under very unusual circumstances.

Part-time enrollment will have a direct and proportional impact on a student's anticipated graduation date. For example, a student attending a semester on a half-time basis will have completed one-half semester toward the 8 full-time semesters, minimum 120 unit undergraduate program.

Details

1. Schools allowing part-time enrollment may have limitations in addition to those stated here with regard to part-time students. Consultation with the specific school is an initial requirement. The decision to enroll a student on part-time basis is made by the dean with approval of the Provost or his/her designee.
2. The student must complete a Part-time Registration Request form for each semester that part-time status is desired, as part-time status lapses at the end of each semester.
3. Tuition for part-time study is proportionate to the fraction of the student's study, determined by the course load, as compared to full-time. Course load for part-time students will be based on the following:
Undergraduates in all Schools, and Graduate Students in the Art, Dance, and Music Schools Minimal full-time study is determined to be 12 or more semester units.
3/4 part-time = 9 to 11.50 semester units
1/2 part-time = 6 to 8.50 semester units
1/4 part-time = 1 to 5.50 semester units
Graduate Students in Schools of Critical Studies, Film, and Theater Minimal full-time study is determined to be 9 or more semester units.
3/4 part-time = 7 to 8.50 semester units
1/2 part-time = 4.50 to 6.50 semester units
1/4 part-time = 1 to 4 semester units
4. Receipts for tuition payment by part-time students are handled in the same manner as those for full-time students. The Registrar will take particular care to compare the part-time student's Course Request Card to the tuition receipt, so that the fraction of tuition paid and the fraction of part-time registration are identical.
5. Access to facilities of the Institute, such as the library, tools, space, equipment and shops, by part-time students shall include those facilities pertaining to the specific program in which the student is enrolled. In unusual situations, exceptions to the above guidelines may be made at the discretion of the student's dean in consultation with the Registrar and with approval by the Provost or their designee.

Students are encouraged to discuss their specific award and billing consequences with Financial Aid and Student Accounts.

- **Three-Quarter (3/4) Time** - If a student chooses to enroll three-quarter time (3/4 time), their CalArts institutional aid will be adjusted to three-quarter (75%) of the amount. Federal grants (if applicable) will also be adjusted to three-quarter. Federal and private loans will be re-calculated according to the three-quarter time tuition budget.

- **Half (1/2) Time** - If a student chooses to enroll half-time (1/2 time), their CalArts institutional aid will be adjusted to half (50%) of the amount. Federal grants (if applicable) will also be adjusted to half. Federal and private loans will be re-calculated according to the half-time tuition budget.
- **Less Than Half-Time (1/4 Time)** - All students must be enrolled at least half-time in order to receive CalArts institutional aid. Students enrolling less than half-time (1/4 time) are not eligible for CalArts institutional scholarship and grants, nor are they eligible for federal loans (private educational loans may be a viable, alternative option). For Pell eligible students, the Pell Grant will be adjusted to one-quarter (25%) of the award amount, if applicable.

The grace period on loan repayment begins when a student drops below half-time enrollment.

*Please note that all CalArts donor and endowed (Named Scholarship) funds require full-time enrollment. This does NOT pertain to the Lillian Disney, President's Aspiring or Alexander Mackendrick awards.

* Exception for Academic Year 2020-2021: Given the COVID-19 pandemic is an exceptional circumstance, the Provost has approved for the School of Film/Video to offer part-time study. Character Animation students are only eligible for part-time during their BFA-4 year and if they are on track with Critical Studies requirements and overall units completed.

Academic Policies - Plagiarism

Academic Policies

Plagiarism

Plagiarism

Plagiarism is the use of ideas and/or quotations (from the Internet, books, films, television, newspapers, articles, the work of other students, works of art, media, etc.) without proper credit to the author/artist. While the argument in a paper can be enhanced by research, students are cautioned to delineate clearly their own original ideas from source material. Students should introduce source material (either quoted or paraphrased); note when the source material ends; and provide citations for source materials using standard documentation formats.

According to CalArts policy, students who misrepresent source material as their own original work and fail to credit it have committed plagiarism and are subject to disciplinary action, as determined by the faculty member, the dean of the student's school and the Office of the Provost.

If you have questions regarding plagiarism or would like direction on how to credit source material, there are reference guides on permanent reserve in the CalArts library.

Please contact one of the CalArts reference librarians for more information.

Academic Policies - Program-Level Adjustment

Academic Policies

Program-Level Adjustment

Program-Level Adjustment

Policy:

A student's year-level in a degree program (e.g., BFA2-1) may be adjusted upward when both of the following conditions exist:

1. The student's level of achievement (both artistic and academic, as determined by the student's mentor, program faculty, program director, and school dean) is compatible with the proposed adjustment; and
2. The student has earned sufficient, documented transfer credit.

Definitions:

1. Transfer credit is defined as coursework completed with grades of "C" or better at a regionally accredited postsecondary institution outside of CalArts.
2. For purposes of program-level adjustment, 15 semester units of transfer credit is considered equivalent to one semester. These units may be completed prior to enrollment at CalArts, during summer sessions or concurrent with CalArts enrollment. Outside course work completed concurrent with CalArts enrollment will be given credit only with prior approval of the Registrar. CalArts Summer Session coursework completed with grades of "LP" or better may be applied toward program-level adjustment.
3. Documentation of transfer credit consists of official transcripts evaluated by the Registrar.

Limitations:

1. The request for program-level adjustment must be supported by and presented to the student's program director by the mentor.
2. A program-level adjustment will generally not exceed one year of advancement.
3. Program-level adjustment will normally be considered at the student's mid-residence review.
4. Recommendations for program-level adjustment for BFA candidates must take the student's Critical Studies requirements into consideration. The Dean of Critical Studies must approve all such requests.

Process:

1. The student discusses the request for program-level adjustment with his/her mentor and Registrar or the Registrar's designee.
 1. Program-level adjustments, when requested at the time of a student review, will be considered and discussed by the review committee. If the adjustment is recommended by the committee, it will be so noted on the review report.
2. A Program-Level Adjustment Petition form must be completed by the petitioning mentor in consultation with the Registrar.
3. Then, the following people must approve and sign the Program-Level Adjustment Petition (in this order):
 1. The student's mentor
 2. The student's program director
 3. The student's school dean
 4. The Dean of Critical Studies (for BFA candidates)
 5. The Registrar

6. The Provost or his/her designee.
4. Upon the Provost's or his/her designee's approval, the petition will be forwarded to the Registrar who will send copies to the student, the student's school office and the Financial Aid Director, and will record the year-level adjustment in the student's permanent record.

Academic Policies - Reports

Academic Policies

Reports

Reports

Grade Reports

Online class rosters and grade reports certify the student's official enrollment and provide the official grade for the course. At the end of each semester the instructor is responsible for entering grades online according to instructions and deadlines issued by the Registrar. The Registrar is responsible for recording all approved changes in grades on the student's permanent record. At the end of each semester grades are available to students via the Hub, hub.calarts.edu.

Mentor's Report

The Mentor's Report serves as an indication of the student's progress toward the degree or certificate. It is prepared online by the mentor each year and is subject to the dean's review. All Mentor Reports will be entered online via the Hub no later than the third Thursday after the end of the Spring semester. Reports must be available for students to view online no later than the third Thursday after graduation day of the academic year. Mentor's Reports are mandatory.

These reports are available to the student online as part of the student's electronic record. The Mentor's Report may include information about the student's advancement in year level, Critical Studies maintenance of effort (BFA students), completion of the course work of each semester, as well as an overall assessment of the student's activities in the metier.

Academic Policies - Reviews

Academic Policies

Reviews

(BFA, Certificate, MA, MFA, and Advanced Certificate students): Student reviews are part of the educational process at CalArts and provide an opportunity for student and faculty communication, aside from the on-going mentoring relationship and responsibility. All review reports will be submitted no later than the third Thursday after the end of the semester of the review. Each semester the Institute Academic Advisor in the Office of the Registrar will submit to each of the Schools, a list of students scheduled for review. The Schools will schedule their reviews and notify the students of their review time. In the case of reviews that involve acceptance to the Institute with a to-be-determined year level, provisional acceptance, year level adjustment or accelerated graduation, other policies apply and those policies should be consulted.

The minimum standards for reviewing students after admission to the Institute include the Mid-Residence Review and the Graduation Review:

Mid-Residence Review: The Mid-Residence Review is carried out by a faculty committee approved by the dean of the student's school. This committee makes a detailed assessment of the student's record and work in relation to the objectives of the program, the student's goals, and the progress toward the degree or certificate. The review usually occurs by the end of the second year for those studying for the BFA or Certificate programs and at the end of the first year for those seeking the MA, MFA, or Advanced Certificate. MFA or Advanced Certificate students within the School of Film/Video must submit a thesis project proposal for review by the faculty review committee at the Mid-Residence Review during the third of fourth semester of residence. If a student does not pass the mid-residence or preliminary review, the committee gives the student reasons and the conditions that must be met in order to satisfy the review requirements. All Mid-Residence Review Reports become a part of the student permanent electronic record. All review reports will be submitted no later than the third Thursday after the end of the semester of the review. When the committee determines the student is not meeting artistic and educational standards, the student is notified in accord with the policies on Metier Standing and Academic Standing policies. Further details on the review process for each school may be obtained from the school offices.

Critical Studies Mid-Residence Review: BFA students will be reviewed by a Critical Studies faculty member at the end of their BFA2, 2nd semester. Through discussion, writing samples, and/or portfolio materials provided by the student, Critical Studies faculty, along with the student, will assess the student's progress in the area of Critical Studies and evaluate the student's advancement in terms of learning goals as established by the School of Critical Studies. All Review Reports become a part of the student permanent electronic record. All review reports will be submitted no later than the third Thursday after the end of the semester of the review.

Graduation Review: The Graduation Review is a final assessment by the dean and faculty to determine whether the student has demonstrated a significant measure of artistic achievement, as well as the satisfactory completion of all residency and program requirements described for the degree or certificate. Deadlines for the graduation review and graduation procedures are established annually by the Registrar, subject to review by the President and Provost. All Graduation Review Reports become a part of the student permanent electronic record. All review reports will be submitted no later than the third Thursday after the end of the semester of the review.

DMA Student Reviews: In the case of DMA students, artistic and academic process is evaluated during a First Year Review, a Formative Portfolio Review, and a Final (Summative) Portfolio Review. These usually take place in Semester II of first, second and third years respectively. They are scheduled by the School of Music, which apprises the students of their review times. The committee makes a detailed assessment of the student's record and work in relation to the objectives of the program, the student's goals, and the progress toward the degree. If the student does not pass a review, the committee gives the student reasons and the conditions that must be met in order to satisfy the review requirements.

Academic Policies - Satisfactory Academic Progress and Financial Aid Eligibility

Satisfactory Academic Progress and Financial Aid Eligibility

Academic Policies

Open Financial Aid Impacted by SAP configuration options

To receive federal and state funds administered by the Financial Aid Office at California Institute of the Arts (CalArts), students must be making measurable academic progress toward completion of an eligible degree program. Accordingly, the following Satisfactory Academic Progress (SAP) Policy for students who receive financial aid is in place. These standards require that a student make academic progress during all periods of enrollment, including periods when a student did not receive financial aid. CalArts will be consistent in applying the SAP policies to full-time and part-time, independent and dependent students of all academic levels.

Students enrolling at CalArts for the first time (including transfers) are initially considered to be meeting SAP. The measurement of academic progress will be made at the conclusion of the first enrollment period and will include all acceptable transfer credits/units that the CalArts academic record contains.

When is Academic Progress Evaluated?

A student's satisfactory academic progress will be evaluated at the end of each semester (Fall and Spring). Students will not be eligible for federal funding during this time if in an ineligible SAP status.

Financial Aid Impacted by SAP

To receive financial aid, a student must be enrolled in an eligible program of study that leads to a degree/credential. Federal and state regulations and policies require all financial aid recipients meet minimum Satisfactory Academic Progress (SAP) requirements to remain eligible for financial aid.

For the purpose of the SAP policy, financial aid is defined as:

- Federal Pell Grants
- Federal Supplemental Educational Opportunity Grants (FSEOG)
- Cal Grants
- Federal Work-Study (FWS)
- Federal Direct Subsidized and Unsubsidized Loans
- Federal Graduate PLUS Loans
- Parent PLUS Loans

Financial Aid Eligibility Statuses

- **Eligible** - Student is meeting the minimum academic standards or has no academic history. Fully eligible for financial aid.
- **Warning** - Student did not meet minimum standards for cumulative GPA and/or 67% completion rate in the previous evaluation period. Student is still eligible for financial aid, but must reach all minimum standards by the end of the next evaluation period to maintain eligibility.
- **Ineligible** - Student has failed to meet minimum standards for cumulative GPA and/or 67% completion rate SAP at the end of the evaluation period. Student is ineligible for financial aid.
- **Timeframe** - Student has attempted more than 150% of the published program length toward a Bachelor's Degree. For example, majors requiring 120 units will be allowed up to 180 attempted units ($120 \times 1.5 = 180$). Graduate and Doctoral students must earn their degree within 150% of the timelines set by the Graduate or Doctoral School per their program. If a student exceeds these unit limits, they are not making progress toward a degree within 150% federal requirement. Student is **ineligible** for financial aid.

Financial Aid Satisfactory Academic Progress Standards

Satisfactory Academic Progress (SAP) is comprised of three measurements (qualitative, quantitative, maximum timeframe). At the time of evaluation, all three requirements must be met to remain eligible for financial aid. For complete details on these measurements please see below.

1. Maintain required cumulative Grade Point Average (GPA) based on matrix below, or higher (qualitative measure)
2. Successfully complete at least 67% of the cumulative attempted units (a quantitative measure)
3. Complete the educational program of study (units needed to earn a degree) within 150% of the published program length.

Undergraduate Students	2.0 GPA for all coursework completed at CalArts based on equivalency.
Graduate Students	3.0 GPA for all coursework completed at CalArts based on equivalency.
Doctoral Students	3.0 GPA for all coursework completed at CalArts based on equivalency.

How is the 67% completion rate calculated?

The calculation is made as follows: earned units divided by attempted units = completion rate.

Successful completion of a class

Although CalArts does not follow a standard letter grading system, grades of High Pass, Pass, and Low Pass are assigned to reflect the quality of a students' work in each course. The equivalencies are calculated as follows:

HP = 4.0

P = 3.0

LP = 2.0

Please see below for how the following non-passing grades will be considered in the Satisfactory Academic Progress evaluations.

Incomplete Grades

An (I) grade is given if the student has been given approval to extend the amount of time needed to complete the course. This grade will be factored into the completion rate and maximum timeframe.

Non-Passing Grades

NC and NG=0.0. A No Credit grade is assigned to students who do not meet the minimum course requirements, and a No Grade is given if the instructor does not submit a grade for the students and will be used in determining completion rate and timeframe. If the grade is submitted later by the instructor, the student will need to contact the Financial Aid Office and we will recalculate the SAP status for the student.

Withdrawals

All institutional withdrawals are factored into the completion rate and the maximum timeframe.

Transfer Students and Transfer units

Students transferring to CalArts are required to have all prior college transcripts evaluated for transfer units. All units accepted by CalArts will be used to determine 67% completion rate and maximum timeframe of 150%.

Repeat Courses

Students repeating courses, for the first time only, can receive aid for that repeated course. All repeat courses will be used in determining completion rate and timeframe. Actual equivalent grades are included in the cumulative GPA.

Audited Courses

Courses taken on an audit basis are not counted when determining the completion percentage or for purposes of determining your cumulative GPA.

Second Degree/Interschool Programs

Undergraduate students seeking second undergraduate degrees and graduate students seeking second graduate degrees as well as students with interschool programs (double majors) are monitored like any other student under this policy. If the Financial Aid Office determines that the student will exceed maximum timeframe or when the students exceed the maximum timeframe allowed for their respective programs, the student will not be eligible for additional aid. Students can appeal for additional time, please see the appeal section. If the appeal is approved, the hours from the initial degree will be removed from the maximum timeframe calculation.

Recommended Rate of Progression

Although students ultimately determine their academic schedules with the assistance of their mentor and academic advisor and can select the number of units they enroll in each semester, the Office of Financial Aid recommends that students complete the following amount of units per year to ultimately meet the total number of units required to graduate within the standard program length.

Student Type	Prescribed Program Length (in years)	Recommended units completed per year
All BFA Programs	4 years	30 units
2 Year MFA Programs	2 years	30 units
3 Year MFA Programs	3 years	20 units
DMA Program	3 years	20 units
MA Program	2 years	1st year 24 units; 2nd year 12 units

How Maximum Timeframe Rate of Progression Is Determined

Below is a chart which demonstrates the maximum number of attempted units a student cannot exceed prior to their completion of their degree.

Academic Level	Units Required to Graduate	Maximum Attempted Credits
BFA	120 units	180 units
MFA or DMA	60 units	90 units
MA	36 units	54 units

How to Reestablish Eligibility

A student must bring their GPA completion rate up to the minimum standards of the required cumulative GPA and 67% completion rate. A student is ineligible for financial aid and cannot be reimbursed during this time.

Financial Aid Suspension Appeal Process

- **Mitigating Circumstances:** If a student has experienced mitigating circumstances (illness, family illness, change of major) during the most recent evaluation period which lead them to not meet minimum standards for GPA and completion rate, they may submit an appeal to reinstate financial aid eligibility. A deadline for the submission of an appeal will be communicated with the suspension status email notification for the corresponding semester. Appeals received after the deadline will not be reviewed. Students who missed the deadline will have an opportunity to appeal in future semesters.
- **Timeframe Mitigating Circumstances:** If a student has not completed their program of study within the 150% timeframe and there are mitigating circumstances (illness, job related, family illness, change of major), they may submit an appeal to reinstate financial aid eligibility.

Requirements for Appeal Evaluation

- Completion of appropriate appeal form (GPA/Completion Rate; Timeframe)
- **Personal Statement:** Student must provide a concise statement explaining why they were unable to maintain SAP, what has changed, and the action to be taken to ensure they will be successful going forward; and
- Provide acceptable documentation of extenuating circumstance(s) that prohibited them from meeting SAP
- Students are required to meet with their institute academic advisor and submit a copy of their academic plan to the Office of Financial Aid after the advising meeting

The following are examples of acceptable documentation to support a student's reason for appeal

- **Personal injury or illness** - Detailed letter, on letterhead, from physician explaining dates and types of illness, recommended treatment, dates of non-attendance, prognosis, etc.
- **Death/illness or injury of a close family member** - Death certificate, obituary notice; documentation of illness or injury of close family member.
- **Legal Issue** - Divorce decree, separation agreement, police report detailing incident, date and those involved
- **Job Conflict** - Letter from supervisor, on letterhead, stating scheduling problems, etc.
- **Disability** - Letter from Disability Services Office addressing problems that arose during the semester in question and the resolution for future terms or medical documentation from other outside sources, letter from a doctor, etc.
- **Other** - Any other documentation that will support the appeal (letter from faculty, or third-party source)

Appeals that are incomplete and/or lack supporting documentation are not reviewed and the student is notified.

If the appeal is approved the student will be placed on one of two Financial Aid Eligibility Statuses:

- **Probation** - Students with approved appeals will be placed on a probation status for a prescribed number of semesters. The student will be required to follow their academic plan to allow the student to meet minimum standards within a fixed number of semesters. The student is fully eligible for financial aid as long as they are strictly following the academic plan. If at any time the student stops following the plan they will become **ineligible** for financial aid. If a student meets minimum standards at any time while on an academic plan their Financial Aid Eligibility Status will be updated to eligible.

- **Timeframe Probation** - The student and CalArts have agreed to an academic plan. The student is fully eligible for financial aid, as long as they are strictly following the success plan. If at any time the student stops following the academic plan, they will become permanently **ineligible** for financial aid. Students will not be permitted to extend their program when they are on Timeframe Probation.

Progress will be monitored at the end of each semester after grades are posted. If a student fails to meet any of the conditions of their Academic Plan, eligibility for future financial aid will be suspended.

All appeals are reviewed by the Financial Aid SAP Appeals Review Group. All SAP appeal decisions are final.

If the appeal is denied the student will remain **ineligible** for financial aid until they meet all minimum standards. The student is responsible for determining other methods to cover their institutional charges for any terms in which they are deemed ineligible for federal or state financial aid.

Availability of SAP Policy: The SAP policy is available to students on the CalArts Financial Aid website. Office staff may also print copies of the policy in the office if a request is made. The policy is updated as needed or whenever changes in federal regulations occur.

STUDENTS WILL BE NOTIFIED BY EMAIL OF THEIR SAP STATUS AT THE END OF EACH SEMESTER

NOTICE TO APPLICANTS

This policy was created pursuant to the federal regulations relating to Satisfactory Academic Progress (Sections 668.16(e), 668.32(f) and 668.34).

Revised Date: Dec 2023

Academic Policies - Smoking

Catalog Policies

Smoking

Smoking

In accordance with City Ordinance, smoking is only allowed in outside areas that are designated for smoking. The entire artistic/academic building and the other annex buildings have been designated as smoke-free buildings.

Smoke-Free Areas on Campus

The smoke-free area begins at the curb leading from the parking lot at the front entrance of the main building and continues along the entire path to the front door as well as the area leading to the doors of the Music School. The entire area in front of our main building is also a smoke-free area.

In addition to this area, CalArts currently prohibits smoking within 25 feet of any door to any building on campus or from any equipment supplying fresh air to a building.

Definition of "Smoke-Free"

Smoke-free means that smoking, the use of smokeless tobacco products, and the use of unregulated nicotine products (e.g. "e-cigarettes") will be strictly prohibited.

Enforcement

All members of our community should work together to enforce this policy. If you see someone smoking in this smoke-free zone, please say something to encourage this person to join us in this endeavor to improve the health of our community.

Designated Smoking Areas

A number of designated smoking areas have been established on campus and are marked as smoking areas.

Academic Policies - Structure of Degrees and Certificates

Academic Policies

Structure of Degrees and Certificates

Structure of Degrees and Certificates

California Institute of the Arts defines its degrees and certificates as Institute degrees and certificates given through the Schools of the Institute.

The programs within the Schools are structured to allow for majors, but the degrees or certificates granted are from the School and are not distinguished by sub-discipline. For example: Students concentrating in Acting would receive a degree or certificate from the School of Theater.

Academic Policies - Student Records

Academic Policies

Student Records

Each student has a Permanent Record maintained online or in the Registrar's Office. In addition, the Office of Financial Aid maintains student financial aid records. Accounting maintains student ledger records in the Accounting Office. CalArts complies with student rights established under the law affecting student records (The Family Educational Rights and Privacy Act of 1974). Within the CalArts community, only those members, individually and collectively, acting in the students' educational interests are allowed access to students' records. A description of the process used for compliance with the Act is provided in this publication and includes the rights of student access to all records except where described.

Questions should be discussed with the Registrar (academic records), the Controller (accounting records) or with the Director of Financial Aid (financial aid records).

Academic Policies - Transfer Credit and Credit by Examination: Credit by Examination

Academic Policies

Transfer Credit and Credit by Examination: Credit by Examination

Credit by Examination

California Institute of the Arts grants credit toward the Bachelor of Fine Arts degree for successful completion of examinations in the Advanced Placement Program of the College Entrance Examination Board and for examinations for the International Baccalaureate Diploma.

Students presenting scores of 3 or better on AP exams are granted 4 semester units toward the Critical Studies requirement for each examination in the Humanities or Sciences as they relate to Critical Studies requirements.

Students scoring 4 or better on International Baccalaureate Higher Level exams will be granted 4 semester units toward the Critical Studies requirement for each examination in the Humanities or Sciences as they relate to Critical Studies core curriculum requirements. A maximum of 38 semester units will be allowed for transfer toward the CalArts Critical Studies requirements.

CRITICAL STUDIES

Critical/Intellectual Skills credit

- AP English Language and Composition

Computing & Research Skills credit

- AP Computer Science A

Humanities credit

- AP English Literature and Composition

Social Science credit

- AP Comparative Government and Politics
- AP European History
- AP Human Geography
- AP Psychology
- AP United States Government and Politics
- AP United States History
- AP World History

Science & Math credit

- AP Calculus AB
- AP Calculus BC
- AP Statistics
- AP Biology
- AP Chemistry
- AP Environmental Science
- AP Physics B
- AP Physics C: Electricity and Magnetism
- AP Physics C: Mechanics
- AP Physics 1
- AP Physics 2

Metier Studies/Other Metier Studies credit

- AP Art History

Critical Studies Elective credit

- AP Macroeconomics
- AP Microeconomics
- AP Chinese Language and Culture
- AP French Language and Culture
- AP German Language and Culture
- AP Italian Language and Culture
- AP Japanese Language and Culture
- AP Latin
- AP Spanish Language and Culture
- AP Spanish Literature and Culture

NON-CRITICAL STUDIES

Studio credit

- AP Music Theory

- AP Studio Art: 2-D Design
- AP Studio Art: 3-D Design
- AP Studio Art: Drawing

Academic Policies - Transfer Credit and Credit by Examination: Transfer Credit

Academic Policies

Transfer Credit and Credit by Examination: Transfer Credit

Transfer Credit

General Policy

Transfer credit is considered for acceptance toward a CalArts degree only when:

1. It was earned at a postsecondary institution accredited by a regional accrediting agency or a foreign postsecondary institution recognized by its national government.
2. An equivalent grade of A, B, C or Pass was earned.

Credit toward the Major

The CalArts Registrar's Office will conduct an evaluation of previous education and training and will grant appropriate credit in accordance with Institute policies. The decision on year level placement at the time of acceptance is made by a faculty committee in each of the Institute's schools, based on portfolio or audition, and may not exceed a level that can be substantiated by acceptable transfer credit. The schools are not obligated to recognize transfer credit in the major area when determining year level of acceptance.

Transfer Credits and Critical Studies

CalArts accepts postsecondary transfer credits from regionally accredited colleges and universities and will accept equivalent courses for curriculum requirements in Critical Studies. A maximum of 38 semester units will be allowed for transfer toward the CalArts Critical Studies requirement.

Students with previous bachelors degrees who are accepted at the BFA level will be required to complete at least 8 semester units of CalArts Critical Studies credit in order to obtain a BFA degree from CalArts. All other students will be required to complete at least 8 of the required 46 semester units of Critical Studies credit at CalArts. See the Critical Studies section of the Course Catalog for specific details.

Limitations on Units Accepted Toward Critical Studies

1. *Religious Studies:* Critical Studies accepts for transfer credit historical, philosophical and literary studies of religion and the Bible. We do not accept courses in religious studies that represent interpretations of a particular church or sect.
2. *Business Courses:* We will give credit for courses that combine business and the arts, as these are equivalent to our Survival in the Arts courses.
3. *Foreign Languages:* We will accept elective credit toward the Critical Studies requirements for foreign language courses.
4. *Applied Sciences:* Generally we proceed on a course-by-course basis in allotting transfer credit to the applied sciences such as courses in the areas of engineering, electronics and computer science. Through course descriptions and syllabi we wish to be assured that there is a significant scientific or quantitative component to the course for which credit is given.
5. *Speech/Oral Communication:* Courses that highlight oral communication in conjunction with critical thinking and evidenced based reasoning are accepted. Through course descriptions and syllabi we wish to be assured that there is a significant and sustained critical thinking within the courses for which transfer credit is awarded.

Credit for Summer Courses or Concurrent Enrollment

CalArts generally accepts credit earned by a currently enrolled student if the credit is earned at a regionally accredited postsecondary institution and otherwise meets transfer criteria. Students must consult with the Dean of the School of Critical Studies and/or the Registrar prior to enrollment in outside courses for which Critical Studies credit is expected. Consultation with the Dean and/or the Registrar will ensure that course choices of the student are consistent with our requirements and will serve the student in fulfilling those requirements. Transfer credit is not guaranteed unless prior approval of the Dean of Critical Studies and/or the Registrar has been obtained.

Leave of Absence

Credit for work done at a regionally accredited institution while the student is away on official leave of absence may be given under the following circumstances:

1. When prior approval for proposed course work is granted by the Dean of the School of Critical Studies and/or by the Registrar;
2. When the student has submitted an approved Leave of Absence form to the Registrar's Office; and
3. When an official transcript of course work completed is provided, certifying the credit earned.

Academic Policies - Tuition and Fees Refund Policy

Academic Policies

Tuition and Fees Refund Policy

Tuition and Fees Refund Policy

Students admitted and registered for classes at the California Institute of the Arts during the fall or spring semester are financially responsible for all fees and charges associated with those classes. Students who officially withdraw from all courses or take a leave of absence during the first 4 weeks of a semester are eligible for a tuition refund based on the schedule below.

Official notice received within the first week of classes	90%
Official notice received within the second week of classes	75%
Official notice received within the third week of classes	50%
Official notice received within the fourth week of classes	25%
Official notice received after the fourth week of classes	0%

***Please note:** This tuition refund schedule does not apply to the summer session. The official withdrawal or leave of absence date is determined by when the Office of the Registrar receives the completed withdrawal or leave of absence form.

- Required fees are non-refundable.
- Course fees will be refunded until the last day to add or drop classes.
- Refunds will be issued for complete withdrawal or leave of absence based on the above schedule. No refunds will be issued for a change in mode of instruction.
- In direct correlation with the tuition refund policy, CalArts institutional scholarships/grants will be calculated according to the same percentage(s) as the tuition being charged/refunded to students who, for any reason, take a Leave of Absence or Withdraw from the Institute, following the start of an academic term.

Academic Policies - Understanding of CalArts Promotional Use of Student Name, Image, and Creative Work

Catalog Policies

Understanding of CalArts Promotional Use of Student Name, Image, and Creative Work

Understanding of CalArts Promotional Use of Student Name, Image, and Creative Work

I understand that the CalArts Office of Communications is responsible for initiatives promoting the Institute and its educational and artistic programs, and that, in the course of doing so, this office may engage in the following:

- Use of my name.
- Use of my photographic or video likeness.
- Reference to artistic, musical, literary, or any other student creative work produced in connection with my studies at CalArts.
- Use of representation, reproduction, display, or performance of any such student work as listed above.

I further understand and acknowledge that:

- Such uses by CalArts shall be limited to the development and promotion of the Institute's non-profit educational objectives.
- All documentation made by CalArts of student work is the property of CalArts and may be used for promotional, informational, and instructional purposes, including reproduction or other representation in printed and electronic publications, websites, press kits, promotional presentations, and classroom instruction.
- Any such uses shall comply with the United States Copyright Law of 1976.
- CalArts has a non-exclusive right to the promotional, informational or instructional uses of my student creative work.
- I will not receive any compensation for the uses of my student creative work by CalArts as cited above. The aforementioned non-exclusive right to the promotional use of work made as a CalArts student may continue after I graduate.

Students who do not wish CalArts to display their creative work for Institute promotional, informational or instructional purposes, or who do not wish their names and/or photographic or video likenesses to appear in CalArts publications, websites, press kits, or any other promotional materials, must notify the CalArts Office of Communications to this effect. Students may also specify conditional uses, if any, of their names, likenesses, and representations of creative work. Notifications must be made via email, addressed to communications@calarts.edu.

Upon receiving such e-mail notifications, the Office of Communications will return to the student a confirmation of receipt, which the student should retain for their records. The date of the Communications e-mail confirmation constitutes the date after which CalArts will no longer use that student's name, likeness, or representation of their creative work for Institute promotional purposes.

Academic Policies - Veterans Administration Yellow Ribbon Program

Catalog Policies

Veterans Administration Yellow Ribbon Program

Veterans Administration Yellow Ribbon Program

California Institute of the Arts is a proud participant in the Post 9/11 GI Bill Yellow Ribbon Program for the 2012-2013 academic year. The Yellow Ribbon Program is a provision of the Post-9/11 Veterans' Educational Assistance Act of 2008. To obtain general information and eligibility requirements for the Yellow Ribbon Program, visit the Veterans Administration website at <https://benefits.va.gov/gibill/>.

CalArts Yellow Ribbon Policy

CalArts has pledged to contribute a maximum of \$9000 in scholarship/grant funds for tuition and fees to no more than 10 students each year, who qualify for the benefit. The CalArts contribution is first met by institute scholarship/grant funds from your program. If scholarship or grant funds do not meet the \$9000 maximum, the institute will make up the difference in matching grant funds. This amount is then matched by the Veterans Administration.

How to Apply

1. Apply for Financial Aid at CalArts
Students who qualify for the Yellow Ribbon Program must apply for financial aid with the CalArts Office of Financial Aid no later than March 2nd each year of attendance at <https://calarts.edu/tuition-and-financial-aid/financial-aid/apply-financial-aid>
2. Submit Letter of Eligibility
If approved by the VA for the Yellow Ribbon Program, the student will receive a Letter of Eligibility mailed directly from the Department of Veterans Affairs. The student must submit this document to the VA Advisor at CalArts (located in the Office of the Registrar) immediately upon receipt. Students who submit Letters of Eligibility after registration will not qualify for Yellow Ribbon benefits until the following semester.
<https://www.va.gov/education/about-gi-bill-benefits/post-9-11/yellow-ribbon-program/>

Please note that participation in the Post 9/11 GI Bill Yellow Ribbon Program is subject to annual approval by CalArts administration.

Academic Policies - Withdrawal from the Institute

Catalog Policies

Withdrawal from the Institute

Withdrawal from the Institute

Any non-graduating students who terminate their enrollment at CalArts during or at the end of any semester must complete a [Withdrawal form](#) in the Office of the Registrar.

Students who choose to formally withdraw during the Add/Drop period will have all in progress courses dropped from their transcript. Students who formally withdraw during the Withdrawal period will be assigned "W" notations for all in progress courses. Students who withdraw after the Withdrawal period or after the end of the semester will receive the grades assigned by their faculty. Students who fail to enroll from one semester to the next, or who do not return from an approved leave as expected, will be automatically withdrawn from the Institute by the Office of the Registrar.

Students who have withdrawn from the Institute may request readmission by submitting a new application through the Admissions Office. It is at the discretion of the School and Program to determine specific portfolio requirements for individual students requesting readmission; Schools are not required to readmit withdrawn students. In order for transfer credit to be applied to the CalArts degree, transcripts for all work completed since leaving CalArts must be presented at the time of readmission.

All withdrawn students readmitted to the Institute will be subject to current policies governing degree requirements and catalog rights. Students who withdraw while on academic warning or probation must meet the terms of their warning or probation, if readmitted.

Administrative/Unofficial Withdrawal

An "unofficial withdrawal" occurs when a student stops attending all classes and stops participating in any academic activities beyond the date they last attended classes. Students may be administratively withdrawn from the Institute in cases where their non-attendance (unofficial withdrawal) has been confirmed by all currently assigned faculty. The decision to administratively withdraw a student is made by the Vice President for Student Experience (or designee), in collaboration with the student's School and the Registrar.

Procedures

1. Determination of Actual Unofficial Withdrawals

Faculty and/or Mentors can submit [Care Reports](#) for students who have ceased attending classes or participating in academic activities, and/or contact the Director of Care and Well-being or Office of the Registrar directly. The Director of Care and Well-being in partnership with the Registrar, will conduct an attendance audit with the faculty and School. The student's last date of attendance will be confirmed by the Registrar, and the student will be administratively withdrawn.

B. Determination of Potential Unofficial Withdrawals

At the end of the semester/session when final grades have been recorded, the Office of the Registrar will run a report to identify students whose grades for the term are all NC, I or a combination of NC, I, and W grades. At the end of the semester the CalArts Financial Aid staff will review the list and evaluate each student to determine whether the student should be considered to have unofficially withdrawn. Follow up with the faculty and/or Registrar may be required to determine whether or not a student ceased attendance in all classes.

C. Last Date of Attendance

1. The last date of attendance for W grades is generally the withdrawal date. When a NC grade is recorded, the faculty must supply the last date of attendance.
2. Faculty are to participate in the Registrar's attendance audit. This allows the registrar to maintain accurate records while complying with federal financial aid requirements.

Unless otherwise specified by the Vice President for Student Experience (or designee), any decision to administratively withdraw a student will take immediate effect. However, this decision is subject to automatic review within seven days by the Provost (or designee), including the Institute Diversity Officer. Should students choose to challenge the administrative withdrawal decision, they may do so through the Student Grievance Procedure, but the initiation of a grievance will not delay the effective date of the withdrawal.

Students who are administratively withdrawn may pursue readmission under the same guidelines detailed above.

If you need to withdraw from all of your classes, you should to speak to a financial aid advisor before doing so to determine how it may affect your financial aid and your Satisfactory Academic Progress. If you have any questions about your Title IV program funds, contact the CalArts Financial Aid Office.

Treatment of Title IV Aid When a Student Withdraws

Unofficial Withdrawals and how it impacts your Financial Aid

Per federal regulations, schools are required to review students who received federal financial aid and did not pass any classes. An assessment must be made to determine whether the student earned the non-passing grades while attending classes or stopped attending classes but did not officially withdraw. Students who stopped attending classes may be required to repay a portion of the federal financial aid for that semester. If it is determined that a student never began attendance in some or all classes, aid may be canceled completely. The review process must be completed within 30 days after the end of each semester.

If a student follows Institute procedures and withdraws, they will have an official withdrawal date and their financial aid refund calculation will be completed according to the [CalArts Return to Title IV policy](#).

At the end of each semester, all federal financial aid recipients who receive no passing grades will be reviewed to determine if the non-passing grade was earned while attending or due to no longer attending class. The CalArts Financial Aid office receive the Last Date of Attendance from the Registrar to determine how much aid needs to be returned.

Any refund owed to a federal financial aid program is the student's responsibility and will appear as a charge on the student's next CalArts bill.

The bottom line is to make sure you attend and participate in your classes! If you have any concerns about your courses please be sure to contact your academic advisor.

This policy is in accordance with Federal financial aid regulations published in the November 1, 1999 Federal Register, volume 64, number 210, section 668.22 and DCL GEN-04-03 Revised published November 2004.

Institute Department

In addition to CalArts’ naturally collaborative atmosphere, the Institute offers opportunities for undergraduates and graduates to pursue other courses of study concurrently with their chosen discipline.

Integrated Media Concentration

Integrated Media is a supplemental concentration offered by many MFA programs at CalArts. It is designed specifically for advanced students whose creative use of technology—in particular digital media—goes beyond their primary areas of study.

The Center for Integrated Media supports all IM students across CalArts, enabling them to apply new technologies and integrate multiple media and disciplines into new forms of expression. Prospective graduate students who are interested in IM as a supplemental concentration apply to the relevant métier MFA program and indicate their intention to be considered for IM on their admissions application.

Applicants to IM should review the [IM portfolio and essay requirements](#) in addition to their métier program requirements. These applications are reviewed jointly by MFA program faculty and IM faculty. For more information, visit the [Center's website](#).

[Integrated Media Concentration Requirements](#)

Digital Arts Minor

The Digital Arts Minor is designed to help undergraduate students grasp the knowledge to build, engineer and design innovative custom systems to impact our understanding of how technology can be used in the arts. A student who completes the Digital Arts Minor has demonstrated aptitude in computer programming, web design, video editing, digital fabrication, digital sound production, and knowledge of the historical context of digital arts.

For more information on the Digital Arts Minor, please email **Ajay Kapur**, associate provost for Creative Technologies and director of Music Technology: Interaction, Intelligence & Design (MTIID), at akapur@calarts.edu.

[Digital Arts Minor Requirements](#)

InterSchool Degree

An InterSchool Degree, or double major, is available to a small number of advanced third- and fourth-year undergraduates and graduate students whose skills, previous training and artistic interests warrant pursuing a degree in more than one school at CalArts. Such specialized courses of study must set clearly defined objectives and have the approval of the deans of the participating Schools.

Description

Arts Pedagogy: Approaches to Teaching & Learning in the Collegiate Classroom

In her book, *Teaching to Transgress: Education as the Practice of Freedom*, bell hooks states, "To educate as the practice of freedom is a way of teaching anyone can learn." In our class, we will learn about teaching as artist-teachers in higher education and adult community programs. Together, we will read and discuss foundational education philosophies that continue to shape arts education discourse and practice. Our study will include contemporary artist-teachers and theorists who explore teaching and learning in diverse classrooms and contexts.

Together, we will read essays, prompts, provocations, and interviews. We'll listen to podcasts, watch videos and hear from guests who share about their work as artist-teachers. Our class spirit is generative and collaborative. It invites process, inquiry and reflection. Our learning also will be experiential. In addition to class discussion

and in-class writing prompts, we will engage critically and creatively with course texts by doing activities that you might bring into your own classrooms. For example, we will use a variety of participation techniques and arts-based activities to study our material and to model ways of teaching your students. We will learn about student-centered pedagogy, classroom management, facilitating equitable classroom cultures, lesson planning, classroom instruction, and critiques as formative assessment. Throughout, we will also consider what can sometimes seem to be less tangible - the relational, joyful and deep transformation that comes from teaching-learning with others.

Media & Web Development

Subject Code Course Number
ICOM 101

School(s) Program(s)
Institute Digital Arts

Academic Level
UG - Undergraduate

Credit Hours

Min Credit Hours:
3

Description
This course provides an introduction to the process of modern web development. Each student will learn the basics of HTML, CSS, and JavaScript and how to combine them into a functioning portfolio website. Students will learn how to work with rich media sources, create dynamic animations, and deploy content to the web using

free and open source tools. In addition, students will explore modern development tools like Github, Visual Studio Code, CMS (content management systems) like Wordpress, Contentful and others. We will also explore how to deploy virtual machines (VM's) on cloud servers (Google, Amazon AWS) to host our web applications and infrastructure. Furthermore, throughout the course, students will also gain essential skills in uploading, managing, and analyzing media content online, enabling them to effectively showcase their work and track its performance in the digital landscape.

Description

A Crash Course in Graphic Design, Visual Culture, and Basic Design Application
Through a set of online lectures in design history and culture, as well as weekly hands-on assignments and in-person discussions, this workshop is designed to give you a basic understanding of the fundamentals of graphic design. We will explore how graphic design functions in the world and the importance it holds in our daily interaction with just about everything we see and touch. The lectures will outline important historic design movements and help contextualize principles such as layout, typography, logo design, composition, hierarchical structure, and illustration. The assignments will provide you with an opportunity to try your hand at designing and conceptual problem solving either on a computer or by traditional analog techniques. We will go over each assignment weekly with an in-class participatory critique followed by a general discussion and Q & A.

Description
This course will focus on the two largest internal events CalArts produces: Halloween and Drag Ball. Both of these events, requiring a well developed theme, and artistic and managerial participation from all areas of the school, are funded by the institute (through the Student Union) and therefore are developed at an institute level.

Halloween, being both famous and infamous for its themed implementations and high energy execution, has been a part of the CalArts experience since its beginnings in the early 70's. This multidisciplinary collaboration sets forth the development of this year's event through story development, design, marketing, immersive sound scapes, and musical performances.

Drag Ball, while a more recent development within CalArts culture, is an expression of CalArt's commitment to queer performance and celebration. Still constructed on a foundation of multidisciplinary collaboration, Drag ball is a kaleidoscope of themed entertainment, performance based experimentation, high energy music productions all resulting in a show that has launched the careers of multiple drag performers.

This practicum will develop and construct the theme, scenic, lighting, soundscape, experience design, and management of production of the events, build and produce the events at a high level with materials sourced from rental houses or paid for by the institute for the production of them.

Students will develop pieces for their portfolio, and engage with industry professionals, including alumnx producers and designers, at the Industry Walkthrough, when these outside guests are given a tour of the spaces in advance of the event opening.

(THIS IS NOT A CALL FOR PERFORMERS, DJs, OR BANDS - THAT WILL HAPPEN LATER IN THE SEMESTER)

Description

CalArts' annual Halloween event has grown from a party with some bands to a themed story telling experience centered around the main dance party in Main Gallery. In this class, we will create as story for the event that will be carried through arrival to exit, including designing the entrance, the Main Gallery stage, a beer room, a "chill room", and the outdoor smoking area. Once the story is developed, the designers working on the spaces will create designs for the space that communicate the story through scenic, lighting, and audio elements. Additionally, students will work on graphic design and marketing strategies for the party and keeping the theme clear and build anticipation for the event. Once the theme and story are determined, and designs have begun, the class will work on drafting, budgeting, and securing necessary vendors for each space.

IIDS407 - The Fine Art of Radical Gardening

General

Course Long Title
The Fine Art of Radical Gardening

Subject Code	Course Number
IIDS	407

School(s)
Institute

Academic Level
UG - Undergraduate

Credit Hours

Min Credit Hours:
1

Description

As a collective, we will be creating a permanent on-campus garden from building the beds and soil to planting the seeds. The course will be taught by environmental artist Fritz Haeg, who created a community garden at Calarts in 2005 centered around community organizing and gardening as an ancient art form (look up Calarts Garden Fritz Haeg). This Winter Session will serve as the creation of the garden, and will extend into an independent study course to continue maintenance and development in the Spring semester. By registering for this course, you are committing to the maintenance of your plot and commitment to the communal care of the garden during the spring semester.

We will be exploring the possible alternatives to the conventional practice of the contemporary artist. This generally involves the solitary creation of work in a generic non-imposing studio space and the solitary experience of the completed work in an equally generic and non-imposing gallery space. Perhaps this model is the most expedient way to market the work of the artist. What are the other social, political and economic forces at work? Through these classes we will look at the opportunities for the contemporary artist to respond to the unique conditions that surround them, to directly interact with the complex reality of their time and place and the people that are a part of their lives. These classes will look in particular at the marginalized and ephemeral art forms of gardens and events. Of particular interest will be issues of public space, communal experience and organic processes..

The garden will include a small xeriscape low-water garden of plants native to the region and a community garden with approximately 30 plots available to students, faculty and staff. Plots could be used for anything from food production and flower beds to experiments and art installations. As an alternative to the computer and technical labs, this space will provide students with a location on campus to observe and experiment with organic processes.

IIDS408 - Creative Career Job Search Strategies

General

Course Long Title

Creative Career Job Search Strategies

Subject Code	Course Number
IIDS	408

School(s)
Institute

Academic Level
UG - Undergraduate

Credit Hours

Min Credit Hours:
1

Description

Learn how to pursue jobs, gigs, internships, apprenticeships, and other professional opportunities efficiently and effectively. Develop fluency with platforms and search strategies to maximize your time management and results. Build a toolkit to arrange your priorities, contacts, and content in order to find, apply for, and secure career opportunities in a streamlined, thoughtful, sustainable way. Develop your profiles, portfolios, and presence for employer and collaborator audiences as well as a suite of documents and templates from which to customize future application submissions. Determine your priorities pertaining to future work environments, companies, teams, pathways, and goals. Learn how to find opportunities (even if they are unlisted!) no matter how well or poorly they are being described and how to expand your search to reflect your holistic identity as a working artist. Consider and determine how you define career success for yourself as well as what kind of career rhythm you seek. Think about possible pivots; prior planning prevents poor performance when you expect the unexpected. Examine ways to broaden your network by connecting directly with peers, recruiting professionals, and others with whom you have a shared area of interest. Depending on your area(s) of career interest, you may be tasked with developing resumes, cover letters, CVs (curriculum vitae), and other documents as well as digital content for specific professional networking platforms, apps, and websites. The creative economy is complex, demanding, and ever-changing. Boost your confidence as a future job-seeker taking this class as a 'test-drive' to immerse yourself in what it will be like to apply for career opportunities. Pivot out of 'the struggle is real' into 'the juggle is real' as a creative professional in pursuit of great opportunities to make art, make a living, make community, make a difference, and make life and work plans and priorities tailored to your individual artistic practice and goals.

IIDS409 - Your Brilliant Idea As Fundable Project!

Course Long Title

Your Brilliant Idea As Fundable Project!

Subject Code	Course Number
IIDS	409

School(s)
Institute

Academic Level
UG - Undergraduate

Credit Hours

Min Credit Hours:
0.5

Description

Develop your brilliant idea(s) into a clear, strong, fundable, producible project proposal with help from specialists in grant writing, budgeting, feasibility, and production. Strongly encouraged for students seeking CalArts support for spring projects and beyond.

In this course we will focus on crafting successful proposals for collaborative projects to be produced on campus during the CalArts 50ish Anniversary Reunion Weekend. We will cover all aspects of proposal writing from describing your project in a compelling narrative, to budgeting, research synthesis, and production coordination with facilities. This will be an opportunity for students to be mentored by faculty and staff across the institute. While using the 50ish project proposal guidelines as our springboard, these skills are 100% transferable for preparing all your future funding requests.

EXAMPLES OF PROJECTS may include (pending approval of project proposals): live and sound art, site-specific performances and actions, public interventions inside and outside the campus, multi-media projections, sculptural and environmental installations, curated film programs and/or collaborative exhibitions. All brilliant ideas welcome.

IIDS411 - Funding Strategies for Artists

General

Course Long Title

Funding Strategies for Artists

Subject Code	Course Number
IIDS	411

School(s)
Institute

Academic Level
UG - Undergraduate

Credit Hours

Min Credit Hours:
3

Description

'Funding Strategies for Artists' will help any artist, at any phase of their career, understand best practices in how to identify relevant funding sources, apply for and secure funding for their personal or creative goals. The first part of the class helps students learn how to search for grants, identify fit between funding sources and their projects, and differentiate between different forms of funding from foundations, government entities, nonprofits, and corporations. The second part of the class is a deeper dive into helping students actually apply for a specific funding opportunity. Students will be tasked with assembling written materials and documentation to apply for funding by the end of the course.

Feedback on materials will be given by peers in class presentations and through the LMS (Learn) as well as through a 1:1 meeting with the instructor.

Description

...Art Practice

Fueled by the climate crisis and BLM, social and environmental justice movements have gathered momentum over the past few years, with calls to decolonize and Indigenize various sectors of society increasing in volume and urgency. Working with established Indigenous artists from various métiers as co-instructors, this course will explore the following question: How does an artist decolonize- and perhaps Indigenize- their art practice?

Using their own representative works as an entry point, visiting artists/faculty will delve into their process and praxis to provide critical insights into the above question. Students will also read literature drawn from art and Indigenous studies, incorporating what they've learned into a culminating project or paper centered on their own art practice.

General

Course Long Title

The Real Deal

Subject Code	Course Number
IIDS	413

School(s)
Institute

Academic Level
UG - Undergraduate

Credit Hours

Min Credit Hours:
1

Description

The Real Deal: Managing a Creative Business covers a wide range of entrepreneurial and managerial strategies, structures, standards, and nuanced soft skills required of anyone leading or living a creative life. Built from lived experiences, perspectives, and insights of working visual artists, arts administrators, artist-run gallery directors, and creative entrepreneurs, examples of contracts and professional relationships pertain most directly to visual arts, but can be easily adapted to any creative field. Subjects include contracts, copyrights, business structures, budgeting and accounting, communications, networking in your field, taxes, branding and marketing, the value of authenticity and loyalty, competition and collaboration, negotiation, interpersonal relations, saying no, and much more. Assignments and projects include analysis of and discussions about successful creative entrepreneurs, business operations, team management, communications, and maintaining authenticity and integrity in one's creative work. Throughout the course, students will map out their ideal vision as a creative in their field 10 years into the future: essentially, creating their business plan.

Description

A course in discussing and developing artistic ideas and projects in relation to Solarpunk and Hacktivism. This class will discuss optimistic "futuring," imagining creative solutions for the world's problems using art, data, and our imagination.

Solarpunk is a nascent movement of ideas and culture that embodies aesthetics and functionality in science and the creative process, allowing us to imagine a post-capitalist world with strong reconnections to nature and technology. This class will have students create ideas and works that embody these values and themes.

The course will also discuss and tackle elements

of Hacktivism, using open source data as methods for art making and ways data usage can allow us to examine society and power.

Description

Artist as Educator: Pedagogy, Planning, and Practice. Participants will learn how to effectively and ethically engage with the diverse communities of K-12 students-including English Learners and students with special needs-as artists and educators. This course aims to provide you with tools to better engage with youth participants in and out of formal educational settings to foster an environment of creativity, criticality, and equity. Student-centered learning, project-based teaching, inquiry-based pedagogy, theories of child development, social emotional learning, as well as trauma-informed pedagogy will be explored. We hope to provide you with the tools, practice, and exposure to the field of arts education to guide you in a career as an artist-educator. All sessions will include lecture, discussion, and participatory activities.

Description

As a collective, we will be creating a permanent on-campus garden from building the beds and soil to planting the seeds. The course will be taught by environmental artist Fritz Haeg, who created a community garden at Calarts in 2005 centered around community organizing and gardening as an ancient art form (look up Calarts Garden Fritz Haeg). This Winter Session will serve as the creation of the garden, and will extend into an independent study course to continue maintenance and development in the Spring semester. By registering for this course, you are committing to the maintenance of your plot and commitment to the communal care of the garden during the spring semester.

We will be exploring the possible alternatives to the conventional practice of the contemporary artist. This generally involves the solitary creation of work in a generic non-imposing studio space and the solitary experience of the completed work in an equally generic and non-imposing gallery space. Perhaps this model is the most expedient way to market the work of the artist. What are the other social, political and economic forces at work? Through these classes we will look at the opportunities for the contemporary artist to respond to the unique conditions that surround them, to directly interact with the complex reality of their time and place and the people that are a part of their lives. These classes will look in particular at the marginalized and ephemeral art forms of gardens and events. Of particular interest will be issues of public space, communal experience and organic processes..

The garden will include a small xeriscape low-water garden of plants native to the region and a community garden with approximately 30 plots available to students, faculty and staff. Plots could be used for anything from food production and flower beds to experiments and art installations. As an alternative to the computer and technical labs, this space will provide students with a location on campus to observe and experiment with organic processes.

Description

Learn how to pursue jobs, gigs, internships, apprenticeships, and other professional opportunities efficiently and effectively. Develop fluency with platforms and search strategies to maximize your time management and results. Build a toolkit to arrange your priorities, contacts, and content in order to find, apply for, and secure career opportunities in a streamlined, thoughtful, sustainable way. Develop your profiles, portfolios, and presence for employer and collaborator audiences as well as a suite of documents and templates from which to customize future application submissions. Determine your priorities pertaining to future work environments, companies, teams, pathways, and goals. Learn how to find opportunities (even if they are unlisted!) no matter how well or poorly they are being described and how to expand your search to reflect your holistic identity as a working artist. Consider and determine how you define career success for yourself as well as what kind of career rhythm you seek. Think about possible pivots; prior planning prevents poor performance when you expect the unexpected. Examine ways to broaden your network by connecting directly with peers, recruiting professionals, and others with whom you have a shared area of interest. Depending on your area(s) of career interest, you may be tasked with developing resumes, cover letters, CVs (curriculum vitae), and other documents as well as digital content for specific professional networking platforms, apps, and websites. The creative economy is complex, demanding, and ever-changing. Boost your confidence as a future job-seeker taking this class as a 'test-drive' to immerse yourself in what it will be like to apply for career opportunities. Pivot out of 'the struggle is real' into 'the juggle is real' as a creative professional in pursuit of great opportunities to make art, make a living, make community, make a difference, and make life and work plans and priorities tailored to your individual artistic practice and goals.

609

School(s)

Institute

Academic Level

GR - Graduate

Credit Hours

Min Credit Hours:

0.5

Description

Develop your brilliant idea(s) into a clear, strong, fundable, producible project proposal with help from specialists in grant writing, budgeting, feasibility, and production. Strongly encouraged for students seeking CalArts support for spring projects and beyond.

In this course we will focus on crafting successful proposals for collaborative projects to be produced on campus during the CalArts 50ish Anniversary Reunion Weekend. We will cover all aspects of proposal writing from describing your project in a compelling narrative, to budgeting, research synthesis, and production coordination with facilities. This will be an opportunity for students to be mentored by faculty and staff across the institute. While using the 50ish project proposal guidelines as our springboard, these skills are 100% transferable for preparing all your future funding requests.

EXAMPLES OF PROJECTS may include (pending approval of project proposals): live and sound art, site-specific performances and actions, public interventions inside and outside the campus, multi-media projections, sculptural and environmental installations, curated film programs and/or collaborative exhibitions. All brilliant ideas welcome.

Credit Hours

Min Credit Hours:

3

Description

'Funding Strategies for Artists' will help any artist, at any phase of their career, understand best practices in how to identify relevant funding sources, apply for and secure funding for their personal or creative goals. The first part of the class helps students learn how to search for grants, identify fit between funding sources and their projects, and differentiate between different forms of funding from foundations, government entities, nonprofits, and corporations. The second part of the class is a deeper dive into helping students actually apply for a specific funding opportunity. Students will be tasked with assembling written materials and documentation to apply for funding by the end of the course. Feedback on materials will be given by peers in class presentations and through the LMS (Learn) as well as through a 1:1 meeting with the instructor.

Description

...Art Practice

Fueled by the climate crisis and BLM, social and environmental justice movements have gathered momentum over the past few years, with calls to decolonize and Indigenize various sectors of society increasing in volume and urgency. Working with established Indigenous artists from various métiers as co-instructors, this course will explore the following question: How does an artist decolonize- and perhaps Indigenize- their art practice?

Using their own representative works as an entry point, visiting artists/faculty will delve into their process and praxis to provide critical insights into the above question. Students will also read literature drawn from art and Indigenous studies, incorporating what they've learned into a culminating project or paper centered on their own art practice.

Description

The Real Deal: Managing a Creative Business covers a wide range of entrepreneurial and managerial strategies, structures, standards, and nuanced soft skills required of anyone leading or living a creative life. Built from lived experiences, perspectives, and insights of working visual artists, arts administrators, artist-run gallery directors, and creative entrepreneurs, examples of contracts and professional relationships pertain most directly to visual arts, but can be easily adapted to any creative field. Subjects include contracts, copyrights, business structures, budgeting and accounting, communications, networking in your field, taxes, branding and marketing, the value of authenticity and loyalty, competition and collaboration, negotiation, interpersonal relations, saying no, and much more. Assignments and projects include analysis of and discussions about successful creative entrepreneurs, business operations, team management, communications, and maintaining authenticity and integrity in one's creative work. Throughout the course, students will map out their ideal vision as a creative in their field 10 years into the future: essentially, creating their business plan.

Description

A course in discussing and developing artistic ideas and projects in relation to Solarpunk and Hacktivism. This class will discuss optimistic "futuring," imagining creative solutions for the world's problems using art, data, and our imagination.

Solarpunk is a nascent movement of ideas and culture that embodies aesthetics and functionality in science and the creative process, allowing us to imagine a post-capitalist world with strong reconnections to nature and technology. This class will have students create ideas and works that embody these values and themes.

The course will also discuss and tackle elements of Hacktivism, using open source data as methods for art making and ways data usage can allow us to examine society and power.

Credit Hours

Min Credit Hours:
1

Description

Transforming Reality: From 3D Scan to AR is a workshop class designed for artists who want to explore the potential of 3D scanning in their art-making practice. In this class, students will learn how to take physical objects and transform them into digital assets that can be used in augmented reality environments. The class will cover two methods of 3D scanning: portable 3D scanning and photogrammetry 3D capture using Adobe Substance Sampler. Students will learn how to optimize the resulting .obj file for further processing with Zbrush. This includes cleaning up the mesh, filling in gaps, smoothing out rough edges, and

reducing the polygon counts. Once the mesh is optimized, students will move on to digital painting techniques using Adobe Substance Painter. They will learn how to modify the texture of the mesh and create custom textures that can be applied to the digital asset.

The final part of the class will cover how to export the painted mesh to an AR environment with Reality Composer. Students will learn how to use AR software to create immersive experiences that showcase their 3D assets in the real world. By the end of the class, students will have a solid understanding of how to use 3D scanning, digital painting, and AR exporting techniques to create unique and engaging art pieces.

Description

Introduction to mechanical activity that provides a framework for contemporary art practices modifies the temporality of the object in the space: The Time factor influences the attitude of the object that moves in space with repeated temporal cadence, rhythms and sounds that lead to a renewal and transformation of the life of the object.

Just as telescopes and microscopes open new perspectives within our interface, mimicking simulation of humans in technology as measurable space to organize our perceptions. To describe probabilities of experiences and actions in kinetic abstract machines, which they are set in a mode of constant production and form-making. They are connected to the human compulsion to produce forms connected to the technological system of production that we have set into motion. The behavior of technological systems of production is random and opportunistic, just like the behavior of humans.

Symbols of physical objects with color, texture, shape, movement and sound allow us to manipulate our reality in the ways we need to survive and reproduce. To live is to continue solving such tasks and to present an endless variety of solutions. "Survival" as replication, synchronicity, control, regulation and movement: Time as a vital rhythm of transformation and progress. Requiring the continuous transfer of energy, these ordering systems will almost always be found in a state of maximum

disorder or will move towards it. This is like having a moral contract, especially your own body, you have to maintain it just to ensure its continued existence. This is an anti-entropic process.

The workshop will introduce various electronic and mechanical components to explore these concepts: servo motors, electric and gear motors, relay circuits, motor drivers, Arduino, LED, diodes, resistors, etc. The learning process is to practice implementing mechanical principles to re-conceptualize (and/or intervene in) our perceptions of space (as pertinent to bodily/corporeal limitations) and systems in time. We will incorporate electric motors and Arduino in innovative ways suitable for our aesthetic/theoretical ends.

Lens Space Code

Subject Code	Course Number
IIMC	420

School(s)
Institute, Integrated Media

Academic Level
UG - Undergraduate

Credit Hours

Min Credit Hours:
1

Description

A six week technical course in which students will make a simple working piece utilizing code written in the Processing programming language. This course introduces the creation and use of code modules which will be fitted together to form a working piece. Each student will create a piece that uses the modules learned in class. The piece may be anything time-based, and can include participatory aspects, interactivity, and other approaches. Topics/modules include acquiring camera data, using that data for triggers, timing, user interaction, thresholding strategies, display of graphical items (video, images, and text), and basic playing of sound files. Each student will create their own variation on the following flow.

Programming building blocks (constructs, such as if-then, loops, and arrays) will be introduced briefly and in such a way that students can make both immediate and repeated use of those building blocks. In the process, students will learn ways in which those building blocks can be connected.

No prior programming experience required.

Registration Restrictions

Description

Multi digital software explorations, network communications, and immersive environments for interactive media.

Code as Nature is a studio workshop that introduces a variety of contemporary artworks, computational software, networking strategies, and artificial environments used in integrated media. Artists use algorithms and simulations to explore and invent new approaches in the field of generativity, interactivity, transcoding and transmediality, connectivity, corporeality and virtuality. The learning process is a study and critique between simulations and the natural world. In this course, participants might employ artificial intelligence (AI), machine deep learning, augmented reality (AR), virtual reality (VR), extended reality (XR) technologies, using OpenAI Gym, Unreal Engine, Google Colab, RunwayML, Visual Studio Code, et al. to create artworks. According to Thomas Hauer's 2017 paper "technological determinism and new media", our regular use of technologies may influence the users and their surroundings, and the converse is also true. Artificial neural networks were invented, inspired by human cognition, and we can now observe machine intelligence and their vision through images, texts, sound, videos, 3D environments, and more.

School(s)
Institute, Integrated Media

Academic Level
UG - Undergraduate

Credit Hours

Min Credit Hours:
3

Description

This class explores artistic experiments with emerging technologies related to Artificial Intelligence and more specifically a subset of AI called Machine Learning. We will look at hands-on approaches to working with these Machine Learning models by interfacing via code and data collection to look at the impact of these emerging technologies on human-centric perspectives of creativity, property and ownership, data collection, and algorithmic control mechanisms in cultural production, finance, and surveillance.

The class will take the form of a series of workshops looking at various machine learning models in order to explore the future possibilities and unintended uses in relation to each student's individual art practices. Topics include using Generative Adversarial Networks to generate new images from our own datasets, text to image generation with Diffusion models, collaborative writing with GPT, deep fakes with first order motion, voice-cloning, and other neural network explorations. We will be learning some basics of the Python coding language in order to better understand how these AI models are constructed.

In addition to workshops, students will engage in critiques/ discussions around topics related to AI such as biometric surveillance, predictive policing algorithms, computer vision, anthropomorphic projections and cultural perceptions of AI.

Description

How can sound create various webs between self and surrounding through reimagining all objects as potential sonic performers? Sounds can operate by forming deep links and various conjunctions into weaving the individual into the surrounding sonic environment and larger social fabric. This class looks at the ways sound operates and travels through objects in relation to sonic spaces and digital territories. We will look at the history of sound art, multichannel sound installations, and mechatronics through experimentation and deep listening

practices. How can artists working with sound reconfigure the spatial distinctions of inside and outside by thinking of all objects as having immersive sonic possibilities? Through hands-on making and collecting sounds, we will practice extending everyday objects into sound objects through speaker transducers and motors. What are the possibilities for sounds when any object can become a sonic source? How can we abstract, attenuate, or actuate these objects by rethinking their sonic potential? Can each speaker be treated as a performer, a poet, node, vector or sculpture in a larger acoustic network? How can we extend these objects through electronics, code, and motors? In a series of hands-on workshops, we will explore the technical possibilities of working with multiple sound sources, networking and configuring multi-channel audio sound installations, and controlling basic motors and solenoids using Arduinos and code. We will explore the digital sound space and think of various ways to actualize these sounds in acoustic space outside and inside of the computer. How can we reconfigure the sonic space by treating every object as a potential sound actuator and extend these objects through creating complex interactions with code? This class is a series of workshops looking at the various ways we can use sound to reimagine, extend or reconfigure our understandings of space.

IIMC452 - Useless Software

General

Course Long Title
Useless Software

Subject Code Course Number
IIMC 452

School(s)
Institute, Integrated Media

Academic Level
UG - Undergraduate

Credit Hours

Min Credit Hours:
3

Description

"Useless Software" is a graduate level studio course that explores the history and practices of creative coding by engaging with computation, poetry, non-functional glitchy software, and web based digital image production. This course offers students an opportunity to explore noncommercial, art-oriented software in shaping online artistic communities and "radical" software culture through programming using the p5.js javascript library, computer graphics programming, and community based software distribution. In this course, we will not only engage with the history and theory of "creative coding" but we will also gain hands-on and "minds-on" experience in coding and developing software that doesn't serve any direct commercial purpose. Useless Software creates a space to explore self developed algorithms, systems aesthetics, and the nature of the glitch. Classes will encompass an examination of a wide array of software art, including methods for the generation and/or manipulation of audio-visual data, text/digital poetry, surface hacks, and the innovative use of instruction sets/algorithms, and code as artistic anti-material. This approach will enable students to create their own programs and projects, bridging the gap between technical skill and artistic experimentation. Students will be encouraged to author their own algorithms and programs while navigating the potential of web based media. No programming experience is required.

IIMC453 - The Implicit Body

General

Course Long Title
The Implicit Body

Subject Code Course Number
IIMC 453

School(s)
Institute, Integrated Media

Academic Level
UG - Undergraduate

Credit Hours

Min Credit Hours:
3

Description

This graduate-level studio course investigates the collisions and entanglements between technology and the human body, providing students with the opportunity to create immersive and interactive installations and performances that unfold through movement, space, and time. The course delves into visual programming for immersive experiences, projection mapping, live camera feeds, spatialized sound, and computer vision. Using the visual programming platform TouchDesigner, participants will harness their bodies as control signals to create interactive artworks and immersive installations that engage with and critique physical and temporal presence, exploring the interplay between movement, data, light, and evolving perceptual states.

Emphasizing critical inquiry and creative experimentation, this course challenges students to rethink the boundaries between the digital and the organic, between technology and the body. Students will engage with theoretical frameworks from spatial computing studies, media studies, human-computer interaction, and performance theory, interrogating the ethical, aesthetic, and conceptual dimensions of interactive and immersive works. Finally, students will create projects that will be either spatialized performances or immersive video installations using Touchdesigner, movement, and projectors.

Description

We will snake our way through large language models. Python has become the defect standard for accessing and talking to AI systems via code. With Python and LLM APIs (programming interfaces), coding can simplify down to one line of code. We gain a degree of both control and power not available otherwise. In this course, we will travel a middle-route: not merely using tools of artificial intelligence, but also not building AI either. Instead, we can address AI much like a tailor custom-fits a suit. Instead of using apps, we can diy the app, putting our own app together a bit like Legos. And we can use AI to generate our code also. No prior coding experience expected or required. Goal: an absurd increase in capability, including in pursuit of works that question: "What is this art-thingie anyway?"
For noobs and coders alike.

Computation Reconsidered

Subject Code Course Number
IIMC 490

School(s)
Institute, Integrated Media

Academic Level
UG - Undergraduate

Credit Hours

Min Credit Hours:
3

Description

How can computation be reconsidered within the critical context of an art practice? Within the digital realms of computation, what ways can artists rethink and engage with "physical" space and touch. This class will explore the basics of programming and physical computing/ speculative interaction design in relation to working with

data inputs and sensors that engage with our immediate environment and body. Through understanding how energy is converted into data, we can find new ways of sculpting these data flows (whether touch, light, sound) with computational processes. This subtly altering this feedback between input and output data will allow us to create environments that constantly change in response to our own bodies. We will look at how to transform this energy back into the analog world through sound, image, and light. Programming experience is not required as we will engage in computational concepts in class and learn various methods for engaging with digital and physical systems in class by creating networked environments and installations that engage in fluid real time processes or performance. A final project will implement the body, sensors, and microprocessors using custom computer programs written in class.

Credit Hours

Min Credit Hours:
1

Description
Introduction to mechanical activity that provides a framework for contemporary art practices modifies the temporality of the object in the space: The Time factor influences the attitude of the object that moves in space with repeated temporal

cadence, rhythms and sounds that lead to a renewal and transformation of the life of the object.

Just as telescopes and microscopes open new perspectives within our interface, mimicking simulation of humans in technology as measurable space to organize our perceptions. To describe probabilities of experiences and actions in kinetic abstract machines, which they are set in a mode of constant production and form-making. They are connected to the human compulsion to produce forms connected to the technological system of production that we have set into motion. The behavior of technological systems of production is random and opportunistic, just like the behavior of humans.

Symbols of physical objects with color, texture, shape, movement and sound allow us to manipulate our reality in the ways we need to survive and reproduce. To live is to continue solving such tasks and to present an endless variety of solutions. "Survival" as replication, synchronicity, control, regulation and movement: Time as a vital rhythm of transformation and progress. Requiring the continuous transfer of energy, these ordering systems will almost always be found in a state of maximum disorder or will move towards it. This is like having a moral contract, especially your own body, you have to maintain it just to ensure its continued existence. This is an anti-entropic process. The workshop will introduce various electronic and mechanical components to explore these concepts: servo motors, electric and gear motors, relay circuits, motor drivers, Arduino, LED, diodes, resistors, etc. The learning process is to practice implementing mechanical principles to re-conceptualize (and/or intervene in) our perceptions of space (as pertinent to bodily/corporeal limitations) and systems in time. We will incorporate electric motors and Arduino in innovative ways suitable for our aesthetic/theoretical ends.

IIMC590 - Computation Reconsidered

General

Course Long Title
Computation Reconsidered

Subject Code Course Number
IIMC 590

School(s) Program(s)
Institute, Integrated Media Integrated Media

Academic Level
GR - Graduate

Credit Hours

Min Credit Hours:
3

Description
Computation Reconsidered is a series of hands-on workshops exploring building multi-channel video installations, video art, and sound installations through building our own custom systems and tools for real time graphics and video editing. Together through the workshops we will investigate how video feedback, haptics and proximity can play a role in how we interact with computational material and digital spaces. We will rethink and reimagine how we interact with the computer by rapidly prototyping ideas using Touchdesigner and projection mapping. In addition, we will look at procedural graphics, spatial, and generative strategies using Touchdesigner which will allow us to quickly work with real time graphics in connection to our user data. The focus of this class will be exploring various ways we can customize, extend, and build systems to work in a real time environment as well as various ways we can experiment with projectors.

Credit Hours

Min Credit Hours:

2

Description

A six week technical course in which students will make a simple working piece utilizing code written in the Processing programming language. This course introduces the creation and use of code modules which will be fitted together to form a working piece. Each student will create a piece that uses the modules learned in class. The piece may be anything time-based, and can include participatory aspects, interactivity, and other approaches. Topics/modules include acquiring camera data, using that data for triggers, timing, user interaction, thresholding strategies, display of graphical items (video, images, and text), and basic playing of sound files. Each student will create their own variation on the following flow.

Programming building blocks (constructs, such as if-then, loops, and arrays) will be introduced briefly and in such a way that students can make both immediate and repeated use of those building blocks. In the process, students will learn ways in which those building blocks can be connected.

No prior programming experience required.

IIMC635 - Algorithmic Practices I

Course Long Title

Algorithmic Practices I

Subject Code

IIMC

Course Number

635

School(s)

Institute, Integrated Media

Academic Level

GR - Graduate

Credit Hours

Min Credit Hours:

3

Description

There is a long history of algorithmic processes in art. We will approach our study through the history of Fluxus and conceptual art, as well as trace the lineage of generative art methods. In addition, there will be a focus on using rules, chance, scripts and scores to understand computers as performers. Using both analog and digital means to communicate and visualize ideas, students will begin to find new ways of implementing algorithms in their individual art practice. In the process of critically rethinking our relationship to algorithms, we will examine how we can engage with computation by repurposing these algorithmic processes in creative ways. Designed for the student with no programming experience, this

course will require both analog and digital experimentation. We will be making work throughout the semester with the computer as a collaborator and executor.

IIMC646 - Code As Nature

Course Long Title
Code As Nature

Subject Code	Course Number
IIMC	646

School(s)
Institute, Integrated Media

Academic Level
GR - Graduate

Credit Hours

Min Credit Hours:
3

Description
Multi digital software explorations, network communications, and immersive environments for interactive media.

Code as Nature is a studio workshop that introduces a variety of contemporary artworks, computational software, networking strategies, and artificial environments used in integrated media. Artists use algorithms and simulations to explore and invent new approaches in the field of generativity, interactivity, transcoding and transmediality, connectivity, corporeality and virtuality. The learning process is a study and critique between simulations and the natural world. In this course, participants might employ artificial intelligence (AI), machine deep learning, augmented reality (AR), virtual reality (VR), extended reality (XR) technologies, using OpenAI Gym, Unreal Engine, Google Colab, RunwayML, Visual Studio Code, et al. to create artworks. According to Thomas Hauer's 2017 paper "technological determinism and new media", our regular use of technologies may influence the users and their surroundings, and the converse is also true. Artificial neural networks were invented, inspired by human cognition, and we can now observe machine intelligence and their vision through images, texts, sound, videos, 3D environments, and more.

IIMC648 - Machine Deep Dreaming

Credit Hours

Min Credit Hours:
3

Description
This class explores artistic experiments with emerging technologies related to Artificial Intelligence and more specifically a subset of AI called Machine Learning. We will look at hands-on approaches to working with these Machine Learning models by interfacing via code and data collection to look at the impact of these emerging technologies on human-centric perspectives of creativity, property and ownership, data collection, and algorithmic control mechanisms in cultural production, finance, and surveillance.

The class will take the form of a series of workshops looking at various machine learning models in order to explore the future possibilities and unintended uses in relation to each student's individual art practices. Topics include using Generative Adversarial Networks to generate new images from our own datasets, text to image generation with Diffusion models, collaborative writing with GPT, deep fakes with first order motion, voice-cloning, and other neural network explorations. We will be learning some basics of the Python coding language in order to better understand how these AI models are constructed.

In addition to workshops, students will engage in critiques/ discussions around topics related to AI such as biometric surveillance, predictive policing algorithms, computer vision, anthropomorphic projections and cultural perceptions of AI.

Credit Hours

Min Credit Hours:
2

Description
How can sound create various webs between self and surrounding through reimagining all objects as potential sonic performers? Sounds can operate by forming deep links and various conjunctions into weaving the individual into the surrounding sonic environment and larger social fabric. This class looks at the ways sound operates and travels through objects in relation to sonic spaces and digital

territories. We will look at the history of sound art, multichannel sound installations, and mechatronics through experimentation and deep listening practices. How can artists working with sound reconfigure the spatial distinctions of inside and outside by thinking of all objects as having immersive sonic possibilities? Through hands-on making and collecting sounds, we will practice extending everyday objects into sound objects through speaker transducers and motors. What are the possibilities for sounds when any object can become a sonic source? How can we abstract, attenuate, or actuate these objects by rethinking their sonic potential? Can each speaker be treated as a performer, a poet, node, vector or sculpture in a larger acoustic network? How can we extend these objects through electronics, code, and motors? In a series of hands-on workshops, we will explore the technical possibilities of working with multiple sound sources, networking and configuring multi-channel audio sound installations, and controlling basic motors and solenoids using Arduinos and code. We will explore the digital sound space and think of various ways to actualize these sounds in acoustic space outside and inside of the computer. How can we reconfigure the sonic space by treating every object as a potential sound actuator and extend these objects through creating complex interactions with code? This class is a series of workshops looking at the various ways we can use sound to reimagine, extend or reconfigure our understandings of space.

IIMC652 - Useless Software

General

Course Long Title
Useless Software

Subject Code Course Number
IIMC 652

School(s)
Institute, Integrated Media

Academic Level
GR - Graduate

Credit Hours

Min Credit Hours:
3

Description

"Useless Software" is a graduate level studio course that explores the history and practices of creative coding by engaging with computation, poetry, non-functional glitchy software, and web based digital image production. This course offers students an opportunity to explore noncommercial, art-oriented software in shaping online artistic communities and "radical" software culture through programming using the p5.js javascript library, computer graphics programming, and community based software distribution. In this course, we will not only engage with the history and theory of "creative coding" but we will also gain hands-on and "minds-on" experience in coding and developing software that doesn't serve any direct commercial purpose. Useless Software creates a space to explore self developed algorithms, systems aesthetics, and the nature of the glitch. Classes will encompass an examination of a wide array of software art, including methods for the generation and/or manipulation of audio-visual data, text/digital poetry, surface hacks, and the innovative use of instruction sets/algorithms, and code as artistic anti-material. This approach will enable students to create their own programs and projects, bridging the gap between technical skill and artistic experimentation. Students will be encouraged to author their own algorithms and programs while navigating the potential of web based media. No programming experience is required.

IIMC653 - The Implicit Body

General

Course Long Title
The Implicit Body

Subject Code Course Number
IIMC 653

School(s)
Institute, Integrated Media

Academic Level
GR - Graduate

Credit Hours

Min Credit Hours:
3

Description

This graduate-level studio course investigates the collisions and entanglements between technology and the human body, providing students with the opportunity to create immersive and interactive installations and performances that unfold through movement, space, and time. The course delves into visual programming for immersive experiences, projection mapping, live camera feeds, spatialized sound, and computer vision. Using the visual programming platform TouchDesigner, participants will harness their bodies as control signals to create interactive artworks and immersive installations that engage with and critique physical and temporal presence, exploring the interplay between movement, data, light, and evolving perceptual states.

Emphasizing critical inquiry and creative experimentation, this course challenges students to rethink the boundaries between the digital and the organic, between technology and the body. Students will engage with theoretical frameworks from spatial computing studies, media studies, human-computer interaction, and performance theory, interrogating the ethical, aesthetic, and conceptual dimensions of interactive and immersive works. Finally, students will create projects that will be either spatialized performances or immersive video installations using Touchdesigner, movement, and projectors.

IIMC654 - The Python Recoils

General

Course Long Title
The Python Recoils

Subject Code Course Number
IIMC 654

School(s)
Institute, Integrated Media

Academic Level
GR - Graduate

Credit Hours

Min Credit Hours:
3

Description

We will snake our way through large language models. Python has become the defect standard for accessing and talking to AI systems via code. With Python and LLM APIs (programming interfaces), coding can simplify down to one line of code. We gain a degree of both control and power not available otherwise. In this course, we will travel a middle-route: not merely using tools of artificial intelligence, but also not building AI either. Instead, we can address AI much like a tailor custom-fits a suit. Instead of using apps, we can diy the app, putting our own app together a bit like Legos. And we can use AI to generate our code also. No prior coding experience

expected or required. Goal: an absurd increase in capability, including in pursuit of works that question: "What is this art-thingie anyway?"
For noobs and coders alike.

IIMC670 - IM Project Development

Description

This is a required class for the Integrated Media MFA2 students. Studio/Critique is framed by an experimental, interdisciplinary and non-traditional approach to art-making while employing various combinations of digital and electronic media (sound and image), interactivity (social, relational or technical), hybridity, immersion (physical or virtual), network strategies and live performance. This approach will frame the context for the critique as we compare and contrast the artist's work with their intent and motivation. The cultural, social and political issues that arise from the artist's work will also be part of the discussions. Various critical methods will be employed throughout the class that allow for the most appropriate format for enabling discussion and critical analysis. The purpose of the class is to enable the artist to experience various interpretations found in the body of work.

Description

This internship is an on-site (in-person, hybrid, or remote, depending on the job offer) work experience directly related to the student's program or career interest. It is completed during the fall, spring or summer semester and can be paid or unpaid, depending on the company's offer.

The Patty Disney Center for Life & Work has a robust program, starting with a formal contract and waiver that the student, on-site supervisor, and faculty supervisor sign which outlines program expectations, goals, and time commitment. Interns are required to attend a welcome orientation/training at the beginning of the semester, a mid-point check in with our Life & Work Advisor, and complete an evaluation upon concluding the internship. On-site supervisors at the host company meet with our Assistant Director of Career Connections & Development for a mid-point check in and must submit an evaluation of the intern at the conclusion of the internship. The Center For Life & Work Director grades the internship based on student and on-site supervisor evaluations, and sends your faculty supervisor the grade and any notable comments about their assessment of the internship. An internship provides the opportunity to gain valuable work experience before graduating; develop new skills and refine others, apply knowledge gained from coursework to on-the-job situations; reality-test tentative career choices; meet and work with professionals, establishing contacts for letters of reference and networking; experience new work environments; and earn money for tuition and expenses.

To begin the process of requesting academic credit for an internship after receiving an offer letter, and additional information about Internships please visit this link on the "<https://hub.calarts.edu/pages/internships>">HUB>.

Description
Technology is blurring the boundaries that have traditionally separated artistic disciplines resulting in the proliferation of mixed- media projects throughout the art world. Many of the emerging technologies, such as machine learning, projection mapping, and wearable interfaces, are turning artists into explorers as they uncover the nuances of such technologies.

Lead by faculty and alumni from the Schools of Dance, Music and Integrated Media /Art, this class will function as an interdisciplinary laboratory. Participants will work together to realize a performance, installation or experience using a handful of selected technologies. Guiding this process will be playful exercises that are intended to inspire mind and body to work together in harmony. The culmination of our efforts will be an experience that utilizes sound, movement visual art and technology in unique ways, and that lays the foundation for future collaboration during the

CalArt EXPO.

The ideal participant for this lab is self-motivated and has a strong individual artistic practice from which to contribute to the whole. Participants should be prepared to dive in and experiment through dance, music, and interactions with technology. The list of available technology includes, but is not limited to, laptops, projectors, microcontrollers, cameras, and wearable sensors.

Description

Interdisciplinary student collaboration + guest artist discussion of anti-politics and abolitionism, creating a gender-neutral Alexa, and a museum residency during a pandemic.

This course will examine political, cultural, social, and practical aspects of interdisciplinary artmaking through guest artist talks and student presentations.

In 2020 we have witnessed drastic changes to our artistic landscape. Genres are evolving in response to quarantine, venue and gallery closures, and virtual forms of creating. For many of us, our physical workspaces have been forced to readjust, and as a result our artistic practices are changing.

Also adapting: our ways of connecting with audiences, our relationships to technology, and the systemic structures through which we know about ourselves and art in general.

How do we connect with each other artistically during this time? How do we view art in relation to a global pandemic, political uncertainty, and social revolution? How can these ideas translate to real-world work and income?

We will explore each of these questions and offer resources as a starting point for students to continue this ever-evolving work on their own.

0.5

Description

In thinking about representation and abstraction this course will focus on how our translations between idea language, body language, and art language create impact and understanding. We will look at how these modes of translation enhance or inhibit communication using individual studies and research methods. With a multidisciplinary lens we will inspect how we bring our thoughts through different translation modes in order to present art work that connects to participants and

viewers. Using our own practices as well as exploring new disciplines we will workshop modes of translation culminating in an in class sharing.

Description

What makes a compelling performance? What is the mental state of performing? How does a performer prepare their mind and body for the act of performing? What is the role of vulnerability in performance? What is the role of perfectionism in performance? What role does performance anxiety have in the process, and what are strategies for mitigating the potentially negative manifestations of that anxiety? What are strategies for harnessing the energy from performance nerves and using it to deliver a stronger performance? What aspects of performing are universal across different disciplines? Where do we find performance in everyday life? What is performance? How do we find joy in performance? These are some of the questions we will discuss during this course, taking a look at the work of researchers and practitioners ranging from psychologist Mihaly Csikszentmihalyi to drag queen and cultural icon RuPaul, and investigating performance traditions and rituals across disciplines and cultures. The course will focus largely on the mental processes and preparations involved in the act of performing. The material for the course will be explored experientially through a hybrid model of in-class exercises and rituals combined with discussion and lecture

Description

'Funding Strategies for Artists' will help any artist, at any phase of their career find and secure funding for their personal or creative goals. The first part of the class helps students learn how to search for grants, identify fit between funding sources and their projects, and differentiate between different forms of funding from foundations, government entities, nonprofits, and corporations. The second part of the class is a deeper dive into helping students actually apply for a specific funding opportunity. Students will be tasked with assembling written materials and documentation to apply for funding by the end of the course. Feedback on materials will be given by peers in class presentations and through a 1:1 meeting with the instructor.

Description

How have we-as individuals and as a collective society-coped with the pandemic throughout the last two years? Between unrivaled layoffs and pay reductions, remote work, travel bans, political divisiveness, elevated/more visible racism, isolation, and loss of life on an unparalleled scale, self-care and stability have never been challenged so abruptly. Community activism has been reactivated in the face of social injustices made more obvious in the pandemic, and prompted reflection about moving from mere survival into thriving. These challenges also offered the opportunity to re-envision life personally and professionally, which invited individuals and communities to embrace their sense of agency in wellness. This course will consist of honest and open conversation surrounding methods of cultivating/maintaining work/life balance and preservation of physical and mental health. Activities such as journaling, meditating, and walking will be encouraged, and stories of individual strategies to manage such vast life

transitions since the start of the pandemic will be shared. This course is led by staff members of Health & Wellness, the Patty Disney Center for Life & Work, and guest speakers.

Description

This three-day, immersive workshop introduces students to the concept of "social sculpture," a phrase coined by Joseph Beuys the idea that society is an art work that we all can shape. And invites them to conceive the first stages of their own work in this field. We will invite participants to focus their ideas in relationship to the concept of Eco-Consciousness + a Sustainable Future.

This hands-on, intensive seminar fosters collaborative, trans-disciplinary approaches to real world challenges. Students across disciplines and genres will learn innovative techniques that will help them harness their "artistic" imagination as well as study current and historical examples of social sculpture in practice. A number of sessions will feature social sculpture artists, who will present projects and engage with the students.

Description

An exploration and hands-on analysis of the underlying systems and inherent interaction models imbued in technologically and scientifically influenced aesthetic experiences.

Any experience and/or process can be distilled down to an underlying system. Works of art are no exception, especially those that incorporate a direct form of interaction with one or more participants. 'Systems Aesthetics' draws its name from art critic Jack Burnham's critical theory on "postformalist" art practices, wherein he described a shift from an object-oriented to a systems-oriented perspective on culture through

the lens of technologically- and scientifically-influenced works of art. If "systems are sets of elements standing in interaction", then it follows that interactive and process-oriented works of art can be understood and developed in relational ways. In this course, we'll analyze and critique the underlying systems in a selected set of art installations and use this learning to design, develop and workshop new concepts for systems-based art installations. In the process, we'll tactically explore how interaction models (active, passive, reactive) and their feedback loops can be understood through various systems theory diagrams (e.g., causal loop diagrams, user flows) in order to make sense of and concept our own interactive and process-oriented installations.

Description

Gaga is the movement research developed by Ohad Naharin.

Gaga is a new way of gaining knowledge and self-awareness through your body. Gaga provides a framework for discovering and strengthening your body and adding flexibility, stamina, and agility while lightening the senses and imagination. Gaga raises awareness of physical weaknesses, awakens numb areas, exposes physical fixations, and offers ways for their elimination. The work improves instinctive movement and connects conscious and unconscious movement, and it allows for an experience of freedom and pleasure in a simple way, in a pleasant space, in comfortable clothes, accompanied by music, each person with himself and others.

Gaga is a technique for dancers, but it is also for people without dance experience.

Gaga classes offer a creative framework for participants to connect to their bodies and imaginations, increase their physical awareness, improve their flexibility and stamina, and experience the pleasure of movement in a welcoming, accepting atmosphere. Participants should wear comfortable clothes and be prepared to dance barefoot or in socks. It is

advisable to bring a bottle of water and a towel for after class.

Gaga taught by Danielle Agami, director of Ate9 dance company, Los Angeles, former member of Batsheva Dance Company, and Ate9 dance company members.

Description

AR, VR, XR, QR: current technology enables many concurrent, overlapping realities. How do we, as artists, contend with these technologies and their/our evolving relationship to space, experience and relationships? We will draw on art historical precedent to engender a critical relationship to emerging technologies, consider the aesthetic and performative aspects of various reality-interfaces, and bring an experimental sensibility to virtual pointing and sculpting tools. The physical/spatial aspects (headsets, chairs, controllers, rooms, bodies, voids, ladders) of VR and AR will be considered as an integral part of building experiences in expanded realities. Analog media will be explored for its potential to augment and deepen already technologically expanded realities.

Description

Practices for Keeping Time combines seminar readings and discussions with time-based studio practices to study links between architecture and dance; the design and choreography of everyday life; and the divergent temporalities of nature, history, and digital communication in an intensive workshop for MFA students and BFA students who are able to fully participate in graduate-level study.

The workshop will be structured in online and timed offline segments over four hours each day. Readings and screenings of course material will be assigned in advance of the workshop and discussed within it. The workshop is an inter-school partnership hosted by the MFA in Choreography Program in the School of Dance and the School of Architecture + Planning at the University of New Mexico. Connecting researchers and practitioners from adjacent fields and distant geographies, Practices for Keeping Time explores new pathways for interdisciplinarity and collaboration.

The COVID-19 pandemic has forced many of us to confront time: from abrupt shifts in daily life to the hours spent confined at home; from questions of mortality and survival to the urgency for radical changes in how we live. We face new realities of "before" and "after." We experience a lag between the temporality of a virus and the speed of capitalism and contemporary culture. The goal of this workshop is to expand students' comprehension of contemporary debates on domestic architecture and within histories of modernism while building their capacity to more critically inhabit their own homes through the use of choreographic strategies drawn from our ongoing artistic research. We will lead students through a series of embodied and performative approaches to analyzing architecture, inhabiting domestic space, and reflecting on the limits and possibilities of the home as a site for creation and critical thinking.

Description

Technology is blurring the boundaries that have traditionally separated artistic disciplines resulting in the proliferation of mixed- media projects throughout the art world. Many of the emerging technologies, such as machine learning, projection mapping, and wearable interfaces, are turning artists into exploreres as they uncover the nuances of such technoloiges.

Lead by faculty and alumni from the Schools of Dance, Music and Integrated Media /Art, this class will function as an interdisciplinary laboratory. Participants will work together to realize a performance, installation or experience using a handful of selected technologies. Guiding this process will be playful exercises that are intended to inspire mind and body to work together in harmony. The culmination of our efforts will be an experience that utilizes sound, movement visual art and technology in unique ways, and that lays the foundation for future collaboration during the

CalArt EXPO.

The ideal participant for this lab is self-motivated and has a strong individual artistic practice from which to contribute to the whole. Participants should be prepared to dive in and experiment through dance, music, and interactions with technology. The list of available technology includes, but is not limited to, laptops, projectors, microcontrollers, cameras, and wearable sensors.

Description

Interdisciplinary student collaboration + guest artist discussion of anti-politics and abolitionism, creating a gender-neutral Alexa, and a museum residency during a pandemic.

This course will examine political, cultural, social, and practical aspects of interdisciplinary artmaking through guest artist talks and student presentations.

In 2020 we have witnessed drastic changes to our artistic landscape. Genres are evolving in response to quarantine, venue and gallery closures, and virtual forms of creating. For many of us, our physical workspaces have been forced to readjust, and as a result our artistic practices are changing.

Also adapting: our ways of connecting with audiences, our relationships to technology, and the systemic structures through which we know about ourselves and art in general.

How do we connect with each other artistically during this time? How do we view art in relation to a global pandemic, political uncertainty, and social revolution? How can these ideas translate to real-world work and income?

We will explore each of these questions and offer resources as a starting point for students to continue this ever-evolving work on their own.

Gaga classes offer a creative framework for participants to connect to their bodies and imaginations, increase their physical awareness, improve their flexibility and stamina, and experience the pleasure of movement in a welcoming, accepting atmosphere. Participants should wear comfortable clothes and be prepared to dance barefoot or in socks. It is advisable to bring a bottle of water and a towel for after class. Gaga taught by Danielle Agami, director of Ate9 dance company, Los Angeles, former member of Batsheva Dance Company, and Ate9 dance company members.

Integrated Media Department

The Center for Integrated Media

Integrated Media (IM) is a cross-disciplinary supplemental concentration of workshops, seminars and critiques offered by The Center for Integrated Media (CIM) at CalArts. The cross-disciplinary curriculum is designed specifically for advanced graduate students whose creative use of media and technology goes beyond their primary areas of study in art, dance, film/video, music, theater and creative writing. The Center for Integrated Media is designed to accommodate those students who want to interact with their peers from across the Institute within a learning environment that features a collective studio, an exhibition space and digital media tools, enabling them to explore new spatial and environmental installations, media based performance, digital video, sound, gaming, interactivity, object based media and the Internet.

Prospective graduate students who are interested in The Center for Integrated Media can apply to the relevant métier MFA program and indicate their intention to be considered for IM on their admissions application. Applicants to IM should review the IM portfolio and essay requirements in addition to their métier program requirements. MFA program faculty and IM faculty review these applications jointly. Applicants are expected to show a high level of artistic and critical ability required for the métier program and, at the same time, demonstrate significant intention to experiment with digital media technologies through a cross-disciplinary creative practice.

IM students must fulfill all of the requirements of their métier MFA programs. In addition, students must complete 2 IM seminar classes, an IM critique class, a Project Development class and produce an IM project during their final year of residency. Further coursework can include elective courses on technical and theoretical subjects such as media theory, network topologies, new software and hardware, programming basics, digital video production and editing, interactive systems and new Internet applications.

Applicants to IM should review the [IM portfolio and essay requirements](#) in addition to their métier program requirements. These applications are reviewed jointly by MFA program faculty and IM faculty. For more information, visit the [Center's website](#).

Integrated Media Concentration Requirements

- IIMC500 Conversations on Media, Culture and Practice
- IIMC510 Research and Practice Seminar
- IIMC670 Integrated Media Project Development
- IIMC690 Integrated Media Project Critique
- 1 Media Based Elective with an IM faculty

Integrated Media Learning Goals

- Actualize the complex dialectic between the creative process and new forms of media;
- As content producers, integrate diverse forms of practices into multi-platform artistic expressions;
- Forge creative research into the media arts, science, technology and cultural studies;
- Think critically and communicate persuasively about the aesthetic and political possibilities inherent in media and culture; and
- Conceptualize, plan and execute sophisticated projects that articulate a distinct vision using a broad range of media and transdisciplinary skills.

Description
This course will explore the custom-made software Otro!, exclusively designed by Drew Trujillo to revolutionize sound design for live performance. Otro! captures and sonifies intricate performer movements and locations, seamlessly blending technology and artistry. It empowers directors, choreographers, cinematographers, visual designers and sound designers to push creative projects. Students interested in the intersection of movement, music, technology and live performance would be well-suited to this course. The course will require a blend of studio practice and exploration, rehearsals, readings and will culminate in a performance.

Description

Transforming Reality: From 3D Scan to AR is a workshop class designed for artists who want to explore the potential of 3D scanning in their art-making practice. In this class, students will learn how to take physical objects and transform them into digital assets that can be used in augmented reality environments. The class will cover two methods of 3D scanning: portable 3D scanning and photogrammetry 3D capture using Adobe Substance Sampler. Students will learn how to optimize the resulting .obj file for further processing with Zbrush. This includes cleaning up the mesh, filling in gaps, smoothing out rough edges, and reducing the polygon counts. Once the mesh is optimized, students will move on to digital painting techniques using Adobe Substance Painter. They will learn how to modify the texture of the mesh and create custom textures that can be applied to the digital asset. The final part of the class will cover how to export the painted mesh to an AR environment with Reality Composer. Students will learn how to use AR software to create immersive experiences that showcase their 3D assets in the real world. By the end of the class, students will have a solid understanding of how to use 3D scanning, digital painting, and AR exporting techniques to create unique and engaging art pieces.

Description

Introduction to mechanical activity that provides a framework for contemporary art practices modifies the temporality of the object in the space: The Time factor influences the attitude of the object that moves in space with repeated temporal cadence, rhythms and sounds that lead to a renewal and transformation of the life of the object. Just as telescopes and microscopes open new perspectives within our interface, mimicking simulation of humans in technology as measurable space to organize our perceptions. To describe probabilities of experiences and actions in kinetic abstract machines, which they are set in a mode of constant production and form-making. They are connected to the human compulsion to produce forms connected to the

technological system of production that we have set into motion. The behavior of technological systems of production is random and opportunistic, just like the behavior of humans. Symbols of physical objects with color, texture, shape, movement and sound allow us to manipulate our reality in the ways we need to survive and reproduce. To live is to continue solving such tasks and to present an endless variety of solutions. "Survival" as replication, synchronicity, control, regulation and movement: Time as a vital rhythm of transformation and progress. Requiring the continuous transfer of energy, these ordering systems will almost always be found in a state of maximum disorder or will move towards it. This is like having a moral contract, especially your own body, you have to maintain it just to ensure its continued existence. This is an anti-entropic process. The workshop will introduce various electronic and mechanical components to explore these concepts: servo motors, electric and gear motors, relay circuits, motor drivers, Arduino, LED, diodes, resistors, etc. The learning process is to practice implementing mechanical principles to re-conceptualize (and/or intervene in) our perceptions of space (as pertinent to bodily/corporeal limitations) and systems in time. We will incorporate electric motors and Arduino in innovative ways suitable for our aesthetic/theoretical ends.

Description

In an essay called From My to Me (2020), internet art pioneer Olia Lialina writes: Me is cheap, Me is easy to control, Me is easy to channel, Me is slave of its own reflection, Me is a slave of the platforms that make the reflection glossy. Me is data. Me is data closest to metadata. This make Me just perfect to satisfy advertisers and to sate neural networks.

Studying the self-publishing web trends since the early internet, Lialina's essay explores the web design changes from user practices of making My Websites -- websites primarily built to express love for a celebrity or collect lists of favorite items, to the practices of making Me Websites - websites solely promoting the work and personalities of its makers. In this shift, building websites ceases to be a process that builds one's love for Avril Lavigne, and becomes a practice that develops love for oneself. But is this love...or narcissism? In the contemporary context of social media platforms where one's coding skills are replaced by one's self-stalking, would it be safe to claim that web design is solely a marketing tool?

Considering the shift from web design as a thinking medium to web design as a thought-through medium where all we see is a reflection of ourselves, this session focuses on building websites about somebody else, not ourselves. By learning about each other and approaching this knowledge as data, the students will explore their listening and understanding skills through coding and web design.

Description

A six week technical course in which students will make a simple working piece utilizing code written in the Processing programming language. This course introduces the creation and use of code modules which will be fitted together to form a working piece. Each student will create a piece that uses the modules learned in class. The piece may be anything time-based, and can include participatory aspects, interactivity, and other approaches. Topics/modules include acquiring camera data, using that data for triggers, timing, user interaction, thresholding strategies, display of graphical items (video, images, and text), and basic playing of sound files. Each student will create their own variation on the following flow.

Programming building blocks (constructs, such as if-then, loops, and arrays) will be introduced briefly and in such a way that students can make both immediate and repeated use of those building blocks. In the process, students will learn ways in which those building blocks can be connected.

No prior programming experience required.

Description

Multi digital software explorations, network communications, and immersive environments for interactive media.

Code as Nature is a studio workshop that introduces a variety of contemporary artworks, computational software, networking strategies, and artificial environments used in integrated media. Artists use algorithms and simulations to explore and invent new approaches in the field of generativity, interactivity, transcoding and transmediality, connectivity, corporeality and virtuality. The learning process is a study and critique between simulations and the natural world. In this course, participants might employ artificial intelligence (AI), machine deep learning, augmented reality (AR), virtual reality (VR), extended reality (XR) technologies, using OpenAI Gym, Unreal Engine, Google Colab, RunwayML, Visual Studio Code, et al. to create artworks. According to Thomas Hauer's 2017 paper "technological determinism and new media", our regular use of technologies may influence the users and their surroundings, and the converse is also true. Artificial neural networks were invented, inspired by human cognition, and we can now observe machine intelligence and their vision through images, texts, sound, videos, 3D environments, and more.

Description

This class explores artistic experiments with emerging technologies related to Artificial Intelligence and more specifically a subset of AI called Machine Learning. We will look at hands-on approaches to working with these Machine Learning models by interfacing via code and data collection to look at the impact of these emerging technologies on human-centric perspectives of creativity, property and ownership, data collection, and algorithmic control mechanisms in cultural production, finance, and surveillance.

The class will take the form of a series of workshops looking at various machine learning

models in order to explore the future possibilities and unintended uses in relation to each student's individual art practices. Topics include using Generative Adversarial Networks to generate new images from our own datasets, text to image generation with Diffusion models, collaborative writing with GPT, deep fakes with first order motion, voice-cloning, and other neural network explorations. We will be learning some basics of the Python coding language in order to better understand how these AI models are constructed.

In addition to workshops, students will engage in critiques/ discussions around topics related to AI such as biometric surveillance, predictive policing algorithms, computer vision, anthropomorphic projections and cultural perceptions of AI.

Description

How can sound create various webs between self and surrounding through reimagining all objects as potential sonic performers? Sounds can operate by forming deep links and various conjunctions into weaving the individual into the surrounding sonic environment and larger social fabric. This class looks at the ways sound operates and travels through objects in relation to sonic spaces and digital territories. We will look at the history of sound art, multichannel sound installations, and mechatronics through experimentation and deep listening practices. How can artists working with sound reconfigure the spatial distinctions of inside and outside by thinking of all objects as having immersive sonic possibilities? Through hands-on making and collecting sounds, we will practice extending everyday objects into sound objects through speaker transducers and motors. What are the possibilities for sounds when any object can become a sonic source? How can we abstract, attenuate, or actuate these objects by rethinking their sonic potential? Can each speaker be treated as a performer, a poet, node, vector or sculpture in a larger acoustic network? How can we extend these objects through electronics, code, and motors? In a series of hands-on workshops, we will explore the technical possibilities of working with multiple sound sources, networking and configuring multi-channel audio sound installations, and controlling basic motors and solenoids using Arduinos and code. We will explore the digital sound space and think of various ways to actualize these sounds in acoustic space outside and inside of the computer. How can we reconfigure the sonic space by treating every object as a potential sound actuator and extend these objects through creating complex interactions with code? This class is a series of workshops looking at the various ways we can use sound to reimagine, extend or reconfigure our understandings of space.

Useless Software

Subject Code Course Number
IIMC 452

School(s)
Institute, Integrated Media

Academic Level
UG - Undergraduate

Credit Hours

Min Credit Hours:
3

Description
"Useless Software" is a graduate level studio course that explores the history and practices of creative coding by engaging with computation, poetry, non-functional glitchy software, and web based digital image production. This course offers students an opportunity to explore noncommercial, art-oriented software in shaping online artistic communities and "radical" software culture through programming using the p5.js javascript library, computer graphics programming, and community based software distribution.
In this course, we will not only engage with the history and theory of "creative coding" but we will also gain hands-on and "minds-on" experience in coding and developing software that doesn't serve any direct commercial purpose. Useless Software creates a space to explore self developed algorithms, systems aesthetics, and the nature of the glitch. Classes will encompass an examination of a wide array of software art, including methods for the generation and/or manipulation of audio-visual data, text/digital poetry, surface hacks, and the innovative use of instruction sets/algorithms, and code as artistic anti-material. This approach will enable students to create their own programs and projects, bridging the gap between technical skill and artistic experimentation.
Students will be encouraged to author their own algorithms and programs while navigating the potential of web based media. No programming experience is required.

General

Course Long Title
The Implicit Body

Subject Code Course Number
IIMC 453

School(s)
Institute, Integrated Media

Academic Level
UG - Undergraduate

Credit Hours

Min Credit Hours:
3

Description
This graduate-level studio course investigates the collisions and entanglements between technology and the human body, providing students with the opportunity to create immersive and interactive installations and performances that unfold

through movement, space, and time. The course delves into visual programming for immersive experiences, projection mapping, live camera feeds, spatialized sound, and computer vision. Using the visual programming platform TouchDesigner, participants will harness their bodies as control signals to create interactive artworks and immersive installations that engage with and critique physical and temporal presence, exploring the interplay between movement, data, light, and evolving perceptual states.

Emphasizing critical inquiry and creative experimentation, this course challenges students to rethink the boundaries between the digital and the organic, between technology and the body. Students will engage with theoretical frameworks from spatial computing studies, media studies, human-computer interaction, and performance theory, interrogating the ethical, aesthetic, and conceptual dimensions of interactive and immersive works. Finally, students will create projects that will be either spatialized performances or immersive video installations using Touchdesigner, movement, and projectors.

Description
We will snake our way through large language models. Python has become the defect standard for accessing and talking to AI systems via code. With Python and LLM APIs (programming interfaces), coding can simplify down to one line of code. We gain a degree of both control and power not available otherwise. In this course, we will travel a middle-route: not merely using tools of artificial intelligence, but also not building AI either. Instead, we can address AI much like a tailor custom-fits a suit. Instead of using apps, we can diy the app, putting our own app together a bit like Legos. And we can use AI to generate our code also. No prior coding experience expected or required. Goal: an absurd increase in capability, including in pursuit of works that question: "What is this art-thingie anyway?"
For noobs and coders alike.

Description

Implied Machine Aesthetics is a studio course that combines aesthetic experimentation with theoretical exploration, focusing on circuit bending, the intersection of mechanical engineering and choreography, and the dynamic themes of time, interactivity, and automation. Through hands-on projects using electronic components and Arduino, students will critically explore the temporality of objects, investigate technological breakdowns, and examine how mechanical systems reflect broader ethical and perceptual questions. According to Bruno Latour's philosophy, it is often when things break down that a seemingly inert system opens up, revealing that objects contain more objects. These numerous objects are composed of relations, histories, and contingencies.

School(s)

Institute, Integrated Media

Academic Level

UG - Undergraduate

Credit Hours

Min Credit Hours:

3

Description

How can computation be reconsidered within the critical context of an art practice? Within the digital realms of computation, what ways can artists rethink and engage with "physical" space and touch. This class will explore the basics of programming and physical computing/ speculative interaction design in relation to working with data inputs and sensors that engage with our immediate environment and body. Through understanding how energy is converted into data, we can find new ways of sculpting these data flows (whether touch, light, sound) with computational processes. This subtly altering this feedback between input and output data will allow us to create environments that constantly change in response to our own bodies. We will look at how to transform this energy back into the analog world through sound, image, and light. Programming experience is not required as we will engage in computational concepts in class and learn various methods for engaging with digital and physical systems in class by creating networked environments and installations that engage in fluid real time processes or performance. A final project will implement the body, sensors, and microprocessors using custom computer programs written in class.

Description

In an essay called From My to Me (2020), internet art pioneer Olia Lialina writes: Me is cheap, Me is easy to control, Me is easy to channel, Me is slave of its own reflection, Me is a slave of the platforms that make the reflection glossy. Me is data. Me is data closest to metadata. This make Me just perfect to satisfy advertisers and to sate neural networks.

Studying the self-publishing web trends since the early internet, Lialina's essay explores the web design changes from user practices of making My Websites -- websites primarily built to express love for a celebrity or collect lists of favorite items, to the practices of making Me Websites - websites solely promoting the work and personalities of its makers. In this shift, building websites ceases to be a process that builds one's love for Avril Lavigne, and becomes a practice that develops love for oneself. But is this love...or narcissism? In the contemporary context of social media platforms where one's coding skills are replaced by one's self-stalking, would it be safe to claim that web design is solely a marketing tool?

Considering the shift from web design as a thinking medium to web design as a thought-through medium where all we see is a reflection of ourselves, this session focuses on building websites about somebody else, not ourselves. By learning about each other and approaching this knowledge as data, the students will explore their listening and understanding skills through coding and web design.

IIMC590 - Computation Reconsidered

General

Course Long Title
Computation Reconsidered

Subject Code	Course Number
IIMC	590

School(s)	Program(s)
Institute, Integrated Media	Integrated Media

Academic Level
GR - Graduate

Credit Hours

Min Credit Hours:
3

Description

Computation Reconsidered is a series of hands-on workshops exploring building multi-channel video installations, video art, and sound installations through building our own custom systems and tools for real time graphics and video editing. Together through the workshops we will investigate how

video feedback, haptics and proximity can play a role in how we interact with computational material and digital spaces. We will rethink and reimagine how we interact with the computer by rapidly prototyping ideas using Touchdesigner and projection mapping.

In addition, we will look at procedural graphics, spatial, and generative strategies using Touchdesigner which will allow us to quickly work with real time graphics in connection to our user data. The focus of this class will be exploring various ways we can customize, extend, and build systems to work in a real time environment as well as various ways we can experiment with projectors.

IIMC599 - Independent Study

Description

Under the direction of a specific IM faculty member, students pursue research and study defined at the beginning of each semester.

Permission of Instructor only.

Independent Study is a semester-long agreement developed between a student and a faculty member to discuss ongoing work, a particular project, or a course of study.

This agreement, including frequency of meetings and unit value, will be drawn up on an Independent Study Contract.

The Independent Study contract is available beginning two weeks prior to the start of the Fall and Spring term. Independent Studies are not available in the Summer or Winter sessions.

Once submitted, your request will be reviewed and if approved, will be added to your schedule by the Registrar. The contract can be found by clicking "<https://calarts.formstack.com/forms/is>">Here

IIMC620 - Lens Space Code

General

Course Long Title

Lens Space Code

Subject Code	Course Number
IIMC	620

School(s)
Institute, Integrated Media

Academic Level
GR - Graduate

Credit Hours

Min Credit Hours:
2

Description

A six week technical course in which students will make a simple working piece utilizing code written in the Processing programming language. This course introduces the creation and use of code modules which will be fitted together to form a working piece. Each student will create a piece that uses the modules learned in class. The piece may be anything time-based, and can include participatory aspects, interactivity, and other approaches. Topics/modules include acquiring camera data, using that data for triggers, timing, user interaction, thresholding strategies, display of graphical items (video, images, and text), and basic playing of sound files. Each student will create their own variation on the following flow.

Programming building blocks (constructs, such as if-then, loops, and arrays) will be introduced briefly and in such a way that students can make both immediate and repeated use of those building blocks. In the process, students will learn ways in which those building blocks can be connected.

No prior programming experience required.

IIMC635 - Algorithmic Practices I

General

Course Long Title

Algorithmic Practices I

Subject Code	Course Number
IIMC	635

School(s)
Institute, Integrated Media

Academic Level
GR - Graduate

Credit Hours

Min Credit Hours:
3

Description

There is a long history of algorithmic processes in art. We will approach our study through the history of Fluxus and conceptual art, as well as trace the lineage of generative art methods. In addition, there will be a focus on using rules, chance, scripts and scores to understand computers as performers. Using both analog and digital means to communicate and visualize ideas, students will begin to find new ways of implementing algorithms in their individual art practice. In the process of critically rethinking our relationship to algorithms, we will examine how we can engage with computation by repurposing these algorithmic processes in creative ways. Designed for the student with no programming experience, this course will require both analog and digital experimentation. We will be making work throughout the semester with the computer as a collaborator and executor.

IIMC646 - Code As Nature

General

Course Long Title
Code As Nature

Subject Code Course Number
IIMC 646

School(s)
Institute, Integrated Media

Academic Level
GR - Graduate

Credit Hours

Min Credit Hours:
3

Description

Multi digital software explorations, network communications, and immersive environments for interactive media.

Code as Nature is a studio workshop that introduces a variety of contemporary artworks, computational software, networking strategies, and artificial environments used in integrated media. Artists use algorithms and simulations to explore and invent new approaches in the field of generativity, interactivity, transcoding and transmediality, connectivity, corporeality and virtuality. The learning process is a study and critique between simulations and the natural world. In this course, participants might employ artificial intelligence (AI), machine deep learning, augmented reality (AR), virtual reality (VR), extended reality (XR) technologies, using OpenAI Gym, Unreal Engine, Google Colab, RunwayML, Visual Studio Code, et al. to create artworks. According to Thomas Hauer's 2017 paper "technological determinism and new media", our regular use of technologies may influence the users and their surroundings, and the converse is also true. Artificial neural networks were invented, inspired by human cognition, and we can

now observe machine intelligence and their vision though images, texts, sound, videos, 3D environments, and more.

IIMC648 - Machine Deep Dreaming

General

School(s)
Institute, Integrated Media

Academic Level
GR - Graduate

Credit Hours

Min Credit Hours:
3

Description

This class explores artistic experiments with emerging technologies related to Artificial Intelligence and more specifically a subset of AI called Machine Learning. We will look at hands-on approaches to working with these Machine Learning models by interfacing via code and data collection to look at the impact of these emerging technologies on human-centric perspectives of creativity, property and ownership, data collection, and algorithmic control mechanisms in cultural production, finance, and surveillance.

The class will take the form of a series of workshops looking at various machine learning models in order to explore the future possibilities and unintended uses in relation to each student's individual art practices. Topics include using Generative Adversarial Networks to generate new images from our own datasets, text to image generation with Diffusion models, collaborative writing with GPT, deep fakes with first order motion, voice-cloning, and other neural network explorations. We will be learning some basics of the Python coding language in order to better understand how these AI models are constructed.

In addition to workshops, students will engage in critiques/ discussions around topics related to AI such as biometric surveillance, predictive policing algorithms, computer vision, anthropomorphic projections and cultural perceptions of AI.

Description

How can sound create various webs between self and surrounding through reimagining all objects as potential sonic performers? Sounds can operate by forming deep links and various conjunctions into weaving the individual into the surrounding sonic environment and larger social fabric. This class looks at the ways sound operates and travels through objects in relation to sonic spaces and digital territories. We will look at the history of sound art, multichannel sound installations, and mechatronics through experimentation and deep listening practices. How can artists working with sound reconfigure the spatial distinctions of inside and outside by thinking of all objects as having immersive sonic possibilities? Through hands-on making and collecting sounds, we will practice extending everyday objects into sound objects through speaker transducers and motors. What are the possibilities for sounds when any object can become a sonic source? How can we abstract, attenuate, or actuate these objects by rethinking their sonic potential? Can each speaker be treated as a performer, a poet, node, vector or sculpture in a larger acoustic network? How can we extend these objects through electronics, code, and motors? In a series of hands-on workshops, we will explore the technical possibilities of working with multiple sound sources, networking and configuring multi-channel audio sound installations, and controlling basic motors and solenoids using Arduinos and code. We will explore the digital sound space and think of various ways to actualize these sounds in acoustic space outside and inside of the computer. How can we reconfigure the sonic space by treating every object as a potential sound actuator and extend these objects through creating complex interactions with code? This class is a series of workshops looking at the various ways we can use sound to reimagine, extend or reconfigure our understandings of space.

IIMC652 - Useless Software

Useless Software

Subject Code
IIMC

Course Number
652

School(s)
Institute, Integrated Media

Academic Level
GR - Graduate

Credit Hours

Min Credit Hours:
3

Description

"Useless Software" is a graduate level studio course that explores the history and practices of creative coding by engaging with computation, poetry, non-functional glitchy software, and web based digital image production. This course offers students an opportunity to explore noncommercial, art-oriented software in shaping online artistic communities and "radical" software culture through programming using the p5.js javascript library, computer graphics programming, and community based software distribution. In this course, we will not only engage with the history and theory of "creative coding" but we will also gain hands-on and "minds-on" experience in coding and developing software that doesn't serve any direct commercial purpose. Useless

Software creates a space to explore self developed algorithms, systems aesthetics, and the nature of the glitch. Classes will encompass an examination of a wide array of software art, including methods for the generation and/or manipulation of audio-visual data, text/digital poetry, surface hacks, and the innovative use of instruction sets/algorithms, and code as artistic anti-material. This approach will enable students to create their own programs and projects, bridging the gap between technical skill and artistic experimentation. Students will be encouraged to author their own algorithms and programs while navigating the potential of web based media. No programming experience is required.

IIMC653 - The Implicit Body

Course Long Title
The Implicit Body

Subject Code
IIMC

Course Number
653

School(s)
Institute, Integrated Media

Academic Level
GR - Graduate

Credit Hours

Min Credit Hours:
3

Description

This graduate-level studio course investigates the collisions and entanglements between technology and the human body, providing students with the opportunity to create immersive and interactive installations and performances that unfold through movement, space, and time. The course delves into visual programming for immersive experiences, projection mapping, live camera feeds, spatialized sound, and computer vision. Using the visual programming platform TouchDesigner, participants will harness their bodies as control signals to create interactive artworks and immersive installations that engage with and critique physical and temporal presence, exploring the interplay between movement, data, light, and evolving perceptual states.

Emphasizing critical inquiry and creative experimentation, this course challenges students to rethink the boundaries between the digital and the organic, between technology and the body. Students will engage with theoretical frameworks from spatial computing studies, media studies, human-computer interaction, and performance theory, interrogating the ethical, aesthetic, and conceptual dimensions of interactive and immersive works. Finally, students will create projects that will be either spatialized performances or immersive video installations using Touchdesigner, movement, and projectors.

Course Long Title
The Python Recoils

Subject Code
IIMC

Course Number
654

School(s)
Institute, Integrated Media

Academic Level
GR - Graduate

Credit Hours

Min Credit Hours:
3

Description

We will snake our way through large language models. Python has become the defect standard for accessing and talking to AI systems via code. With Python and LLM APIs (programming interfaces), coding can simplify down to one line of code. We gain a degree of both control and power not available otherwise. In this course, we will travel a middle-route: not merely using tools of artificial intelligence, but also not building AI either. Instead, we can address AI much like a tailor custom-fits a suit. Instead of using apps, we can diy the app, putting our own app together a bit like Legos. And we can use AI to generate our code also. No prior coding experience expected or required. Goal: an absurd increase in capability, including in pursuit of works that question: "What is this art-thingie anyway?"
For noobs and coders alike.

General

Course Long Title
Implied Machine Aesthetics

Subject Code	Course Number
IIMC	655

School(s)
Integrated Media

Academic Level
GR - Graduate

Credit Hours

Min Credit Hours:
3

Description

Implied Machine Aesthetics is a studio course that combines aesthetic experimentation with theoretical exploration, focusing on circuit bending, the intersection of mechanical engineering and choreography, and the dynamic themes of time, interactivity, and automation. Through hands-on projects using electronic components and Arduino, students will critically explore the temporality of objects, investigate technological breakdowns, and examine how mechanical systems reflect broader ethical and perceptual questions. According to Bruno Latour's philosophy, it is often when things break down that a seemingly inert system opens up, revealing that objects contain more objects. These numerous objects are composed of relations, histories, and contingencies.

GR - Graduate

Credit Hours

Min Credit Hours:
3

Description

This is a required class for the Integrated Media MFA2 students. Studio/Critique is framed by an experimental, interdisciplinary and non-traditional approach to art-making while employing various combinations of digital and electronic media (sound and image), interactivity (social, relational or technical), hybridity, immersion (physical or virtual), network strategies and live performance. This approach will frame the context for the critique as we compare and contrast the artist's work with their intent and motivation. The cultural, social and political issues that arise from the artist's work will also be part of the discussions. Various critical methods will be employed throughout the class that allow for the most appropriate format for enabling discussion and critical analysis. The purpose of the class is to enable the artist to experience various interpretations found in the body of work.

School of Art Department

A sanctuary for cross-disciplinary training, the School of Art actively promotes both the creative environment and the intellectual context for artistic experimentation.

The Programs in Art, Photography and Media, Art and Technology, and Graphic Design prepare graduates to thoughtfully challenge prevailing conventions, develop new forms and become innovators and leaders in their chosen fields.

Each unique Program offers specific courses of study and yet none is isolated from the others. True to the Institute's founding ethos, students are highly encouraged to collaborate with one another across disciplines and to investigate hybrid art forms—not only within the School of Art but also throughout all of CalArts. This accumulation of varying expertise provides an invaluable foundation on which students can build an independent practice and expand upon the boundaries of artmaking.

AART.BFA - Bachelor of Fine Arts - Art

General

Program Title	School
Bachelor of Fine Arts - Art	School of Art

Degree	Program Level	CIP Code (National ID)
BFA - Bachelor of Fine Arts	Undergraduate	50.0702

Program Description

4-Year Program The Art BFA track provides solid training in both critical thinking and artistic process, preparing students to be historically grounded thinkers while providing the tools necessary to develop a unique art practice. The curriculum begins with a series of courses in which students investigate various media, art-historical traditions and theoretical positions, providing a strong foundation to individualized studio practice. Additional coursework includes a combination of seminars, group critique classes and independent studies. With the guidance of faculty mentors, students can concentrate on those areas that best serve their personal goals. By the third year in residence, undergraduates are expected to pursue independent studio projects. Beginning undergraduates share studios while most upper-level undergraduates work in individual studios. In addition to fulfilling

Critical Studies Liberal Arts requirements, Art BFA students are required to pass a Mid-Residence Review in the third year and a Graduation Review to complete the Program.

Free Form Requirements

Art Program Requirements

Art Program Learning Goals

By the time students graduate from the Program in Art (BFA and MFA), they should have:

- Conceptualized and created works which evolve from the students' personal vision and purpose, in their own voice and on their own terms.
- Understood the relationship of an artwork's formal, conceptual, and historical properties in relation to the context of their chosen audience.
- Acquired experience with a broad range of mediums and options for the creation of work, in order to make specific choices.
- Developed a foundation of problem solving skills and concepts which support the intention of the artist in their artistic practice.
- Achieved the technical and conceptual ability to interpret the works of other artists through the understanding of visual language.
- Successfully completed a mid-residency review and a graduation review.

The BFA Program in Art is structured to provide a strong foundation for achieving these goals, leading to individualized studio practice.

Bachelor of Fine Arts and Certificate of Fine Arts

Each student will fashion a course of study in consultation with the mentor. The first two BFA years are intended to create a strong foundation for art making and critical thinking; the final two BFA years are intended to allow more personal exploration, grounded in one-on-one study, exhibitions or projects, and corresponding reviews.

To complete the BFA, an undergraduate must complete a total of 9 units of Independent Study.

BFA3 students are required to pass a 3 unit BFA Mid-Res Project, coinciding with the students mid-residency project or exhibition and mid-residency review.

BFA4 students are required to pass the 3 unit BFA Final Project, coinciding with the final exhibition and final review.

It is recommended that BFA students take one Independent Study within the Art Program each semester, beginning in the second year. The maximum number of independent studies with Art Program faculty per semester is 2. BFA1 students are assigned 1 unit of Independent Study in the second semester, however they can take Independent Study in the first semester if they wish.

Each student must complete at minimum of 6 units of Practicum or Winter Session coursework including Art Hazards.

To complete the BFA, an undergraduate must complete a total of 4 studio courses. BFA1 and BFA2 must take at least one studio course each semester from the list below:

- AART-001 through 009
- AART-205 A through Z
- AART-210 A through Z
- AART-310 A through Z
- AART-311 A through Z
- ACOM-218

**Not all studio courses are offered each semester.*

Mentoring

Mentoring is a crucial element for students and faculty to develop knowledge and understanding of the experience in the program and school. Each student is required to maintain regular contact with their mentor, including at least one meeting per semester and regular consultation on their course schedule.

First Year Required Courses:

AART101 Foundation (Fall)

AART104 Foundation Studio (Fall)

AART102 Foundation (Spring)

AAIC103 What Makes it Art?

One assigned Independent Study (AART199) during the Spring Semester

Art Hazards workshop (AART010) and one workshop from Practicum or Winter Session.

One course each semester from the following series (see list below).

- AART-001 through 009
- AART-205 A through Z
- AART-210 A through Z
- AART-310 A through Z
- AART-311 A through Z

Note: AART104 Foundation Studio does not count towards the required 4 studio courses. Only courses listed above meet the requirement.

Not all studio courses are offered each semester.

Second Year Required Courses:

AART201 Post Foundation Seminar/Critique: What's Goin' On? (Fall)

AART203 Post Foundation: Visiting Artists Forum (Spring)

Both sections of Modern Art History in Review (AAIC265 and AAIC266) must be completed during the second year

Two workshops from Practicum or Winter Session

One course each semester from the list below.

- AART-001 through 009
- AART-205 A through Z
- AART-210 A through Z
- AART-310 A through Z
- AART-311 A through Z

Note: Not all studio classes are offered each semester.

Recommended Courses:

One Independent Study Each Semester (AART299)

Third Year Required Courses:

A 3 unit BFA Mid-Residence Project (AART398) coinciding with the mid-residence review, typically in the fall semester

One workshop from Practicum or Winter Session

Recommended Courses:

Two Art Program classes each semester At least one Independent Study (AART399) each semester

Fourth Year Required Courses:

A final project or exhibition is required, in consultation with the mentor.

A 3 unit BFA Final Project (AART498) coinciding with the final exhibition or project in the Spring semester

AART497 BFA4 Independent Studio during Practicum

AART.MFA - Master of Fine Arts - Art

General

Program Title	School	
Master of Fine Arts - Art	School of Art	
Degree	Program Level	CIP Code (National ID)
MFA - Master of Fine Arts	Graduate	50.0702

Program Description
2-Year Program The MFA in Art curriculum provides graduate students a great deal of freedom in designing a course of study that best suits their individualized needs. Students are supported in cultivating their own areas of interests, and in developing research trajectories and critical skills necessary for a unique art practice. In critiques, seminars, individualized studio practice, independent studies and deeply engaging social environments, MFA students enhance their ability to consider and shape the physical and virtual world-and, by extension, the political and social fields they inhabit. To earn the MFA degree, candidates must pass two faculty reviews of their overall artistic and academic progress-once at mid-residence and again prior to graduation. Students are expected to present a project or exhibition during the first year, and required to do so by the end of the second. Graduate students work in individual studios.

Art

Free Form Requirements

Master of Fine Arts and Advanced Certificate of Fine Arts

Each student will fashion a course of study in consultation with the mentor. Each MFA student will present a project or exhibition during both the first and second year.

MFA-1s are required to complete 4 units of MFA Mid-Residence Project with their mentor, with 2 units per semester (AART598).MFA-2s are required to complete 4 units of MFA Final Project with their mentor, with 2 units per semester (AART698).

During Practicum/Winter Session all graduate students will be automatically enrolled in MFA Independent Studio, unless they choose to enroll in a Winter Session offering from another School or Program.

Mentoring

Mentoring is a crucial element for students and faculty to develop knowledge and understanding of the experience in the program and school. Each student is required to maintain regular contact with their mentor, including at least one meeting per semester and regular consultation on their course schedule.

MFA 1 Required Courses:

AART598 MFA Mid-Residence Project (fall and spring semesters)

AART700 MFA Independent Studio during Practicum

It is highly recommended for MFA1 students to take MFA1 Critique (AART 550) in the fall and at least one Graduate Independent Study (AART 599) per semester.

The maximum number of independent studies with Art Program faculty per semester is 2.

MFA 2 Required Courses:

AART698 MFA Final Project (fall and spring semesters)

AART700 MFA Independent Studio during Practicum

It is highly recommended for MFA2 students to take at least one Graduate Independent Study (AART 699) per semester.

The maximum number of independent studies with Art Program faculty per semester is 2.

AGR2.MFA - Master of Fine Arts - Graphic Design - 2 Year

General

Program Title	School	
Master of Fine Arts - Graphic Design - 2 Year	School of Art	
Degree	Program Level	CIP Code (National ID)
MFA - Master of Fine Arts	Graduate	09.0702

Program Description
2-Year Program The two-year MFA curriculum focuses on the advanced exploration of form, methodology and practice, informed by a consciousness of the following contexts: contemporary practice, craft, audience, theory and history, and the constantly shifting media environment. Individual critique within a communal studio structure helps designers to develop a personal direction and agenda, intended to influence work beyond graduate school. The first-year curriculum consists of a sequence of weekly seminars in which research and studio projects are examined and discussed. The second year in residence is dedicated to developing and realizing a major thesis project that contributes to-and challenges-the graphic design community at large. In each of the two years, graduate students deepen and refine their work through a set of required and elective courses covering subjects such as type design, web design, typography, motion graphics, design theory and design history. Visiting designers who lead short-term projects are another important aspect of the CalArts program, which consciously seeks to broaden the types of experiences offered to students within the focused studio environment. Two-year MFA graphic designers are required to pass a Thesis Review to complete the program and obtain the MFA degree.

Graphic Design - 2 Year

Free Form Requirements

Graphic Design Program Requirements
Master of Fine Arts and Advanced Certificate of Fine Arts

Learning Goals for theGraphic Design MFA Program

- During their time in the program students should have:
- Realized conceptually and formally imaginative work.
- Contextualized a project within design history and theory.
- Articulated the intentions and context for a project, and critically evaluate its outcome.
- Conducted independent research and developed of a methodology for exploration, elaboration, and refinement of ideas.

At the start of the MFA2 year, MFA and Advanced Certificate candidates will begin working on a Graduate Practice Project (formerly referred to as thesis project). The major portion of graduate students' time and energy during the Fall Semester of their final year of residence will be spent working on the Graduate Practice project, which should be directed toward both practical investigation and theory.

The Spring Semester of the final year is spent applying/exploring what has been learnt from the thesis in a body of work, or completing/developing the Graduate Practice project.

Mentoring:

Mentoring is a crucial element for students and faculty to develop knowledge and understanding of the experience in the program and school. Each student is required to maintain regular contact with their mentor, including at least one meeting per semester and regular consultation on their course schedule.

First Year Required Courses:

- AGRA501 and AGR503 Graduate Seminar I (Lecture)
- AGRA502 and AGRA504 Graduate Seminar I (Studio)
- AAIC575 and AAIC576 Historical Survey of Graphic Design
- AAIC662 Graphic Design Theory I
- AGRA674 Typographics IA
- AGRA677 Typographics IB
- AGRA700 MFA Graphic Design Practicum Workshop

Second Year Required Courses:

- AGRA601 and AGRA603 Graduate Seminar II (Lecture)
- AGRA602 and AGRA604 Graduate Seminar II (Studio)
- AGRA700 MFA Graphic Design Practicum Workshop At least one program elective each semester

AGR3.MFA - Master of Fine Arts - Graphic Design - 3 Year

General

Program Title	School	
Master of Fine Arts - Graphic Design - 3 Year	School of Art	
Degree	Program Level	CIP Code (National ID)
MFA - Master of Fine Arts	Graduate	09.0702

Program Description
Three-year MFA in Graphic Design is designed for students who do not have a Graphic Design undergraduate degree, but who typically demonstrate a talent and enthusiasm for design, and a level of expertise in their given field. Three-year students have come from such diverse undergraduate backgrounds as photography, journalism, engineering, feminist studies, biology and film. The first year of the three-year MFA seeks to provide students with a broad set of graphic design skills that will equip them to successfully join the two-year MFA program. This first year is practical and direct. Students are exposed to a variety of formal, conceptual and process-based models, often using print media as the baseline for teaching these durable skills. After successful completion of the first year, three-year students carry on into the two-year MFA Program.

Graphic Design - 3 Year

The Spring Semester of the final year is spent applying/exploring what has been learnt from the thesis in a body of work, or completing/developing the Graduate Practice project.

Mentoring:

Mentoring is a crucial element for students and faculty to develop knowledge and understanding of the experience in the program and school. Each student is required to maintain regular contact with their mentor, including at least one meeting per semester and regular consultation on their course schedule.

PMFA Year Required Courses:

- AGRA551 and AGRA553 Visual Literacy (Lecture)
- AGRA552 and AGRA554 Visual Literacy (Studio)
- AAIC575 and AAIC576 Historical Survey of Graphic Design
- AGRA700 MFA Graphic Design Practicum Workshop

First Year Required Courses:

- AGRA501 and AGR503 Graduate Seminar I (Lecture)
- AGRA502 and AGRA504 Graduate Seminar I (Studio)
- AAIC575 and AAIC576 Historical Survey of Graphic Design
- AAIC662 Graphic Design Theory I
- AGRA674 Typographics IA
- AGRA677 Typographics IB
- AGRA700 MFA Graphic Design Practicum Workshop

Second Year Required Courses:

- AGRA601 and AGRA603 Graduate Seminar II (Lecture)
- AGRA602 and AGRA604 Graduate Seminar II (Studio)
- AGRA700 MFA Graphic Design Practicum Workshop At least one program elective each semester

AGRA.BFA - Bachelor of Fine Arts - Graphic Design

General

Program Title	School	
Bachelor of Fine Arts - Graphic Design	School of Art	
Degree	Program Level	CIP Code (National ID)
BFA - Bachelor of Fine Arts Undergraduate		50.0409

Program Description
4-Year Program Over the course of the Program, BFA Graphic Design students create a body of work that is not simply a string of assignments-but which is uniquely theirs-and prepares them to carve an independent path into graphic design practice with a compelling portfolio marked by strong ideas expressed through form. The BFA track is centered around core courses supported by a number of required and elective classes, allowing both structure and flexibility within the curriculum, covering all aspects of graphic design practice. Each year in residence builds on the experience of the previous as a sequence of additional classes explore image-making, typography and design history. Baseline coursework is followed by more specialized classes in areas such as web design, motion graphics and type design.

Free Form Requirements

Graphic Design Program Requirements

Bachelor of Fine Arts and Certificate of Fine Arts

Learning Goals for the Graphic Design BFA Program

- During their time in the program students should have:
- Created work that demonstrates a mastery of the principles of design.
- Understood and explored design within different contextual situations.
- Applied research and analysis to create thoughtful and inventive design.
- Addressed a variety of design briefs while expressing a compelling point of view in the work.
- Critically evaluated their own work and that of others.
- Created visually and conceptually imaginative work.
- Encouraged collaboration with other designers as well as students from other disciplines at the Institute.

The program of required courses in Graphic Design provides a structure for developing conceptual, formal, and critical skills that align with the core studio classes (Graphic Design I through IV). As students progress through the program there is an increasing emphasis on independent work.

Mentoring

Mentoring is a crucial element for students and faculty to develop knowledge and understanding of the experience in the program and school. Each student is required to maintain regular contact with their mentor, including at least one meeting per semester and regular consultation on their course schedule.

First Year Required Courses:

AGRA101 and AGRA103 Graphic Design I (Lecture)

AGRA102 and AGRA104 Graphic Design I (Studio)

AGRA105 Design Issues

AGRA110 Skills for Visualization

ACOM111 Digital Design Lab I

ACOM112 Digital Design Lab II

AGRA121 Intro to Digital Photography

Two workshops from Practicum or Winter Session. A third Practicum or Winter Session workshop is recommended.

Second Year Required Courses:

AGRA201 and AGRA203 Graphic Design II (Lecture)

AGRA202 and AGRA204 Graphic Design II (Studio)

AGRA215 Typography I

AGRA216 Typography II

AAIC275 and AAIC276 Historical Survey of Graphic Design

Two workshops from Practicum or Winter Session

Third Year Required Courses:

AGRA301 and AGRA303 Graphic Design III (Lecture)

AGRA302 and AGRA304 Graphic Design III (Studio)

AGRA315 Typography III

AGRA430 Beginning Web Design or AGRA460 Beginning Motion or AGRA435 Intro to VR Workshop

AGRA421 Image Making I

At least one program elective each semester Two workshops from Practicum or Winter Session

Fourth Year Required Courses:

AGRA401 and AGRA403 Graphic Design IV (Lecture)

AGRA402 and AGRA404 Graphic Design IV (Studio)

AGRA451 Professional Practice for Graphic Design

At least one program elective each semester One workshop from Practicum or Winter Session

APHM.BFA - Bachelor of Fine Arts - Photography and Media

General

Program Title	School	
Bachelor of Fine Arts - Photography and Media	School of Art	
Degree	Program Level	CIP Code (National ID)
BFA - Bachelor of Fine Arts	Undergraduate	50.0605

Program Description

4-Year Program The BFA track is designed to challenge conventional notions of image and art, encourage experimentation with materials and ideas, and build each artist's sense of the context and personal importance of their work. The curriculum is distinguished by its commitment to an evolving suite of technical courses that address continuing shifts in image-making toolsets and theoretical coursework that interrogates the condition of the image, authorship and medium in a contemporary, local and globalized world. Mentors and program faculty provide continuous guidance and collegial artistic advice throughout the BFA Program as students develop the musical skills and creative voice they need to excel as professional lens-based artists after finishing at CalArts. In addition to fulfilling the requirements of the BFA Core Curriculum, BFA Photography and Media students are required to pass a Graduation Review in order to complete the Program.

Free Form Requirements

BFA Requirements:

To complete a BFA, an undergraduate must complete the courses listed below by year level:

- Undergraduate Critique two times (suggested completion in 2nd and 3rd year)
- AAIC300 Visual Semiotics (suggested completion in 2nd, 3rd, or 4th year)
- At least 6 ***elective courses** within the Photography and Media program as defined below (suggested completion in 2nd, 3rd, or 4th year)

*An **elective course** is defined as having a course prefix of APHM within the following curriculum categories: Lecture/Practice, Lecture/Studio, Lecture/Discussion, Group Project, Critique, or Seminar.

Technical courses/workshops, Production, Studio only and Lab courses fall under the technical requirements and are not eligible for elective course credit.

First Year

Required Courses:

- APHM101 and APHM102 Foundation Seminar and Critique
- APHM-103 New Lab
- APHM-110A Beginning Analog Photography

- One technical workshop from the APMH-100 A-Z series or a technical course from APMH110 A-Z series
- AAIC-310 History of Photography
- Art Hazards workshop (AART010) and a second workshop of your choice during Winter Session

Second Year

Required Courses:

- APMH201 Undergraduate Seminar
- APMH305 Undergraduate Critique
- One technical workshop from the APMH-100 A-Z series or a technical course from APMH110 A-Z series
- Two elective courses (APMH)
- Two Winter Session workshops

Third Year

Required Courses:

- APMH305 Undergraduate Critique
- *Realize/Show a Mid-Residency project developed in consultation with the mentor.
- One technical workshop from the APMH-100 A-Z series or a technical course from APMH110 A-Z series
- Two elective courses (APMH)
- Two Winter Session workshops

*Third Year Presentation Requirement:

The Mid-Residency project occurs in the fall semester of the 3rd year or spring semester of the 3rd year for transfer students.

Fourth Year

Required Courses:

- *A final thesis project or exhibition developed in consultation with the mentor
- APMH415 Critique and Exit (second semester)
- APMH499 Independent Study (one each semester)
- One technical workshop from the APMH-100 A-Z series or a technical course from APMH110 A-Z series
- Two elective courses (APMH)
- APMH497 BFA4 Independent Studio during Winter Session

*Fourth Year Presentation Requirement:

The Final Thesis project or Exhibition occurs during the final semester.

Program Description

2-Year Program The MFA Program centers on graduate critiques, seminars and independent studies with faculty, as students devote the majority of their time to creating a distinctive body of work. Seminars stress critical theory, contemporary issues and history, while critique classes establish the basis for dialogue about ongoing work among students and rotating faculty members, helping each student to develop their own criteria and ability to discuss work. Each year, all MFA candidates present an exhibition or other approved public presentation of work, and they must pass a faculty review, including a Mid-Residency review for first year students and a Graduation Review for graduating students, looking at the student's progress and the development of their practice.

Free Form Requirements

Photography and Media Program Requirements

Master of Fine Arts and Advanced Certificate of Fine Arts

Learning Goals and Requirements for the Photography and Media MFA Program

MFA Program Goals:

- Develop a distinctive and substantive body of work.
- Contextualize an art practice in formal, historical, conceptual, and personal terms.
- Establish a sustained discussion of artworks (about one's own work and those of others) in connection with contemporary, historical, and theoretical discourse, along with a representational analysis.
- Gain the ability to conceptualize and execute an exhibition or other presentation of work, as demonstrated through at least two public presentations in the form of gallery exhibitions, screenings, or other approved projects.
- Demonstrate and maintain a practice supported by a Fall Intensive study with a dedicated faculty member during the third semester of residence, culminating in a final project.
- Complete a mid-residency review and graduation review, including an artist statement.

Mentoring:

Mentoring is an essential element of the program, providing structured guidance and support to students throughout their studies. Each student is assigned a dedicated faculty mentor who serves as an advocate and advisor.

Students are expected to:

- Maintain regular contact with their mentor, including at least one meeting per semester.
- Consult their mentor regularly regarding their course schedule.
- Keep their mentor informed and involved in developing their artistic process and production.

Required Courses:

- Two semesters of Graduate Critique
- Two semesters of Graduate Seminar
- One exhibition or other public presentation of their work per year on campus
- Fall Intensive in the first semester of their second year of residency (or third semester of the student's residency). The Fall Intensive is a 5-unit independent study intended to help prepare for a final fourth-semester thesis project

Courses:

APMH.MFA - Master of Fine Arts - Photography and Media

General

Program Title	School	
Master of Fine Arts - Photography and Media	School of Art	
Degree	Program Level	CIP Code (National ID)
MFA - Master of Fine Arts	Graduate	50.0605

FIRST YEAR Requirements:

Graduate Critique (APHM515) (first semester)

Graduate Seminar (APHM525F) (topics change each semester)

Independent Study (APHM599)

Exhibition or other public presentation on campus

MFA Independent Studio (APHM700) (Winter Session)

SECOND YEAR Requirements:

Fall Intensive Study (APHM698)

Graduate Critique (APHM515)

Graduate Seminar (APHM525F) (topics change each semester)

Independent Study course (APHM699)

Exhibition or other public presentation on campus

MFA Independent Studio (APHM700) (Winter Session)

- Successfully completed a mid-residency and graduation faculty review of work that exhibits a personal artistic expression and a critical point of view.

Students enrolled in the MFA Program in Arts and Technology must demonstrate competency through their Graduate Project, which consists of an exhibition of a final body of work and a presentation of their critical research with accompanying documentation. The Graduate Project is supervised by an individual mentor and a faculty committee. The student's Graduate Project must demonstrate an innovative and creative use of new forms of media and technologies within the context of a cogent critical premise.

All graduate students will be pre-enrolled in MFA Art and Technology Practicum Workshop. In addition students can also take Winter Session workshops.

Mentoring:

Mentoring is a crucial element for students and faculty to develop knowledge and understanding of the experience in the program and school. Each student is required to maintain regular contact with their mentor, including at least one meeting per semester and regular consultation on their course schedule.

First Year

Required Courses:

- ATEK510 Art & Technology Studio I
- ATEK511 Art & Technology Studio II
- ATEK520 Conversations on Technology/Culture
- ATEK530 Networked Studio & Critique
- ATEK531 ATEK Research & Practice
- ATEK700 MFA Art and Technology Practicum Workshop

Second Year

Required Courses:

- ATEK620 ATEK Studio/Critique
- ATEK670 ATEK Project Development
- ATEK640 Creative Research
- ATEK700 MFA Art and Technology Practicum Workshop

In Addition:

The Independent Study requirements in the second year can be substituted with an elective.

There is also a group exhibition in the MFA1 year and a final thesis exhibition in the MFA2 years.

There are 2 reviews that are required for graduation, one at the end of the MFA 1 year and one at the end of the MFA 2 year.

HIGHLY RECOMMENDED

- Four approved academic courses (over the course of the two-year residency)
- At least four Independent Studies (over the course of the two-year residency)
- Technical Elective
- Studio Elective

ATEK.MFA - Master of Fine Arts - Art and Technology

General

Program Title	School
Master of Fine Arts - Art and Technology	School of Art

Degree	Program Level	CIP Code (National ID)
MFA - Master of Fine Arts	Graduate	11.0804

Program Description

2-Year Program The Art and Technology curriculum is centered around the student's studio practice, creative research and an exchange of dialogue between peers, visiting artists and faculty. Technical instruction is offered in the creative use of computer programming, networked-based systems, digital image making, digital sound design, installation, interactive media and hybrid performance. This wide range of instruction is augmented with critiques, lectures and seminars that set out to challenge conventional ideas about what constitutes an art practice in the 21st century. Art and Technology MFA students are required to pass a Graduate Review which includes an exhibition and presentation of the work to complete the program and obtain the MFA degree.

Free Form Requirements

Art and Technology

Master of Fine Arts and Advanced Certificate of Fine Arts

Learning Goals for the Art and Technology MFA Program

By the time that students graduate from the MFA Program in Art and Technology, they should have:

- Developed a substantial body of work that articulates a distinct personal vision using a broad range of practical, conceptual, and technical problem solving skills;
- Actualized the complex dialectic between the creative process and emerging forms of new technologies;
- Forged an informed multidisciplinary art practice through physical and intellectual effort, creative research, and critical analysis;
- Demonstrated an ability to think critically and communicate persuasively to a chosen audience about the cultural, historical, and political issues inherent in technology and culture; and

Description

Open to Art Program BFA1 only. This course may be open to students at other year levels, and in other Schools, by Permission of Instructor. What should a work of art be or do right now? In what ways has the nature or notion of art changed, and why? Who or what makes those determinations? This course will consider a series of "case studies" from the Renaissance to the present that have challenged, undermined, or expanded the definition and understanding of art and its relationship to the surrounding culture. In doing this we will look at the ways ideas change over time, and we will also investigate the influence of technology on art, from oil paint to reproducible media. The course is historically-minded, asking how artists might think about their practice as a "conversation" with a wide range of art from the past-whether that practice focuses on narrative, realist depiction, expression, media and mediation, reproduction, or appropriation. Each week's meeting will focus on a specific topic with lecture, readings and discussion organized around that topic. Course requirements will include active engagement in discussions, participation in a group conversation or project and one or two class presentations to be determined in dialogue with the instructor. The course will include practical instruction on research methodologies.

Open to Art Program BFA2. Art Program BFA2 students will be pre-enrolled in this class. This course may be open to students at other year levels, and in other Schools, by Permission of Instructor.

This course will investigate the development of modernity and modern art in relation to the social, political, technological, and cultural shifts and upheavals of the 19th and early 20th centuries. We will consider multiple points of origin for modernism, as well as the crucial concepts and terminology underlying it, including the notion of the avant-garde. The class will engage influential artists and movements (such as Realism, Impressionism, Cubism, Suprematism, Dada, and Surrealism) alongside contemporaneous advances and ideas in literature, music, architecture and design, as well as the invention and popularization of photographic and cinematic technologies.

Description
Open to Art Program BFA2.
Art Program BFA2 students will be pre-enrolled in this class.

This course will interrogate the contentious shifts from high modernism to postmodernity to the present understanding of an art world situated within the larger framework of global culture. Along the way, we will consider the emergence (and, in some cases, the continued resonance) of movements such as Abstract Expressionism, Pop, Minimalism, and Conceptual Art within a broader cultural context. The course will examine the significant role played by critics and criticism, including the writing of artists in articulating the dominant aspirations and values of art in the second half of the 20th Century, as well as the ways in which feminism, globalism, and poststructural theories have continued to shape artistic discourse into the present.

Description

Open to Art School BFA 3 and BFA4.

This course is designed to introduce basic ideas of structuralism (and some of its discontents) as they have been applied to the analysis and criticism of "the visual". After a brief but thorough explication of both Peircean and Saussurean semiotic theories, we will follow the arguments about visual signs and sign making through a selection of readings from the work of Irwin Panofsky, Roland Barthes, Julia Kristeva, Umberto Eco, Jacques Derrida, Michel Foucault, Rosalind Krauss, Kaja Silverman, and Jeremy Gilbert-Rolfe, among possible others. Students will be expected to do all assigned readings, attend weekly lectures, and participate in discussions. Credit will be calculated on attendance and at least one of the following options: a weekly journal of reading and lecture notes; a research paper on a topic of semiotic interest and by permission of the instructor; an art work (made for the class) presented and orally defended in a semiotic context to the class.

Description

The history of photography is studied through slide lectures, readings and class discussion. The class traces photographic modernism to its present crisis. We will consider both the privileged and mundane uses of photography, paying special attention to the often problematic relationship between "fine art" and "applied" photography. The course will offer a close but contextual reading of photographic work, and will require attention to questions posed by aesthetics, art history, sociology, economics, semiotics, and social and intellectual history.

Description

"Practice and Pedagogy: Art Pilots
Students in this class will have the opportunity to explore their artmaking practice through in-class experimentation while gaining a set of critical skills that lend themselves to teaching. In this collaborative Art School / CAP class, participants will gain experience and develop teaching abilities within an interactive social practice environment. This hands-on workshop, taught at a local elementary school, will be aligned with a seminar module where we will explore approaches to pedagogy, view artwork, and discuss readings. Designing projects that emphasize the importance of play and inventive thinking, we will activate drawing, color, sound, collage, writing, object making, and other experimental practices. The flow of this working process offers momentum for the CalArts students to mine the experience as an impetus to their personal work, regardless of individual disciplines. Works by artists using strategies of play and chance / order and chaos, including Helen Mirra's walking/printmaking practice, Eva Hesse's drawing process, and Allan Kaprow's performance work will provide a background for discussion. This dialogue will be further invigorated with readings from Hannah Higgins's The Fluxus Experience, Rosemary Peterson's Why Piaget?, John Dewey's experience and education, Mignon Nixon's 'Child' drawing on Eva Hesse, and Richard Schiff's writing on Richard Tuttle's drawing process. This is a cross-disciplinary class; students from all métiers are welcome. Prior teaching experience or visual art background is not necessary. Students enrolling in this course must be in the Santa Clarita or greater Los Angeles area.

Description

This seminar takes its title from an exhibition curated by artist and CalArts faculty emeritus Charles Gaines at UC Irvine in 1993, titled "Theater of Refusal: Black Art and Mainstream Criticism." In his accompanying catalog essay, Gaines situates marginality as always-already political: "Marginal discourse reveals through its complex relationship with the mainstream that 'truth' can more accurately be defined by the Nietzschean and Deleuze/Guattarian term 'power.' Power (maintenance) is the underlying structure responsible for the mainstream's frequent complaint that marginal discourse addresses only minority concerns. Marginality, therefore, is political, is always seen politically by the mainstream." Starting with Gaines's exhibition and essay, this course seeks to identify a number of contemporary exhibitions in which questions of power are raised in relation to difference, whether implicitly or explicitly; often implicit politics are made explicit with protests of an exhibition or its institution. Topics and case studies include the 1993 Whitney Biennial of American Art; the 2022 edition of Documenta; the 1990s Asian-American activist network Godzilla, "Let the Record Show..." (New Museum, 1988) and other exhibitions confronting the AIDS crisis; and indigenous exhibition approaches alongside the Native American Graves Protection and Repatriation Act (NAGPRA) of 1990. We will consider the relationship between rhetoric and gesture in exhibition-making, as well as the lineage of critical discourse around institutions, and the role of print and social media in shaping discourse and public policy. We will read and interrogate texts by curators, critics, and artists including Howie Chen, Aruna D'Souza, Darby English, Okwui Enwezor, Andrea Fraser, Coco Fusco, and Paul Chaat Smith, among others. Students will participate in individual and group research projects, with several reflective writing assignments.

Description

Open to Art Program BFA3 and BFA4.

"For the rustle," asserts Roland Barthes, "implies a community of bodies: in the sounds of the pleasure which is 'working,' no voice is raised, guides, or swerves, no voice is constituted; the rustle is the very sound of plural delectation-plural but never massive (the mass,

quite the contrary, has a single voice, and terribly loud)." This course will consider the individual and the collective as tactical and historically charged positions for artists, with critical implications for agency and authorship as well as for notions of labor and pleasure. We will begin with Jean-Pierre Gorin's 1986 film-essay *Routine Pleasures*, an elliptical meditation on plural delectation, among other things. Along the way, we will also consider Manny Farber's "White Elephant Art vs. Termite Art," Don Cherry and Organic Music Society, EZTV, the quilters of Gee's Bend, Henry David Thoreau's *Walden*, Simon Leung's *War After War*, Simon Rodia's *Nuestro Pueblo* (Watts Towers), Noah Purifoy and the *Outdoor Desert Art Museum*, the *Center for Land Use Interpretation*, and *Deep Listening Band*, among others. The class will include screenings, readings, discussions, field trips, and student demonstrations and research projects.

UG - Undergraduate

Credit Hours

Min Credit Hours:
3

Description

This course asks students to develop a collaborative project that will respond to the exhibition "Mobilizing Contents: Feminist Art Program" to be held at REDCAT gallery downtown LA, from Sept 6 to Dec 20, 2023. This exhibition activates the CalArts Feminist Art Program Archive to generate collective knowledges based on artistic experimentation and pedagogy. Multiple readings of the exhibition, as proposed by contemporary artists, will offer intersectional feminist views to dialogue with current social movements and its legacies. We will work together to explore key questions and ideas that emerge from the exhibition by analyzing the show itself as well as the archives that it features, and the histories and legacies of the feminisms that are claimed. We will explore the context of the show as well as address the larger political implications of exhibition and archival practices to ask if exhibiting feminism can be feminist. What are feminist practices today in art making and curating and how are these informed by or resistant to these precedents? The course involves some field trips to REDCAT at various stages

during the class as well as the possibility of realizing a class project at REDCAT in response to the exhibition. These visits may take place on Saturdays. It will be each student's responsibility to get to REDCAT for these meetings.

Description
Motion Graphics (also known as Motion Design) is everywhere. It permeates a multitude of spaces and practices including VR, AR, mixed reality, UI/UX, apps, platforms, games, experiences, and increasingly includes AI. It also includes film and TV titles and branding, filmmaking, commercials, music videos and entertainment design. As a specialized practice, Motion Graphics was first recognized by artist and computer graphics pioneer John Whitney in 1962 when he introduced the term "motion graphics" for title design "as a distinctly new problem for the field of design." He argued that the designer may create great graphics but for great MOTION graphics the imaginative articulation of movement is required. It was just a decade earlier, in the 1950s, that the demand for feature film title sequences and more graphically-oriented commercials grew, evolving from abstract films in the early 20th century. This course will look back and forth between past, present, and future of Motion Graphics through weekly presentations, assigned readings, and discussion. Students will identify current issues for the field and speculate theoretically towards Motion Graphics as an increasingly significant and meaningful practice.

Description
In the words of a former student, theory is the thinking that advances the discipline. Theory works hand-in-hand with design history, criticism, and practice to support the realization of relevant and meaningful design work that challenges, plays with, or advances what things get made and what they look like. Through required readings, conversation, and research, students will engage various contemporary debates that potentially impact our ideas, practice, and lives. These include such themes as technology, the environment, culture, society, politics, and many others. Please note that this is not a studio class.

Min Credit Hours:
3

Description

Open to the Art School only.

This course is designed to introduce basic ideas of structuralism (and some of its discontents) as they have been applied to the analysis and criticism of "the visual". After a brief but thorough explication of both Peircean and Saussurean semiotic theories, we will follow the arguments about visual signs and sign making through a selection of readings from the work of Irwin Panofsky, Roland Barthes, Julia Kristeva, Umberto Eco, Jacques Derrida, Michel Foucault, Rosalind Krauss, Kaja Silverman and Jeremy Gilbert-Rolfe, among possible others. Students will be expected to do all assigned readings, attend weekly lectures, and participate in discussions. Credit will be calculated on attendance and at least one of the following options: a weekly journal of reading and lecture notes; a research paper on a topic of semiotic interest and by permission of the instructor; an art work (made for the class) presented and orally defended in a semiotic context to the class.

Description

"Talent Show" is co-taught by Sharon Lockhart (Photo and Media) and Ariel Osterweis (Dance).

This is a course in practice and theory, and explores topics such as amateurism, aspiration, and adolescence. Working through questions of format (stage, television), function (in schools and community centers), audience and judgement, documentation (photography, TV, film), geography, and culture, students will collaboratively explore their own latent or shrouded talents that lie beyond their métier training and expertise as well as visit with (or study) artists working through these ideas. Artists include: Mike Kelley, Marnie Weber, Jim Shaw, Phil Collins, Chuck Barris, Jack Smith, Edgar Arceneaux, and more. With an eye toward U.S. and global entertainment, this course will interrogate the troubling relationship between freak shows, circus, talent shows, and reality TV. Fieldwork and research will be conducted in multiple formats. In addition to generating and documenting performance exercises, students will have the opportunity to write in several modes. This year, the semester culminates with Talent Show at REDCAT theater! This course is open to the Institute (with permission of instructors), including selected BFAs, and all interested MFA, MA, and BFA students must obtain permission of the instructors.

Description

Course available by Permission of Instructor only.

The history of photography is studied through slide lectures, readings and class discussion. The class traces photographic modernism to its present crisis. We will consider both the privileged and mundane uses of photography, paying special attention to the often problematic relationship between "fine art" and "applied" photography. The course will offer a close but contextual reading of photographic work, and will require attention to questions posed by aesthetics, art history, sociology, economics, semiotics, and social and intellectual history.

Description

"Practice and Pedagogy: Art Pilots

Students in this class will have the opportunity to explore their artmaking practice through in-class experimentation while gaining a set of critical skills that lend themselves to teaching. In this collaborative Art School / CAP class, participants will gain experience and develop teaching abilities within an interactive social practice environment. This hands-on workshop, taught at a local elementary school, will be aligned with a seminar module where we will explore approaches to pedagogy, view artwork, and discuss readings. Designing projects that emphasize the importance of play and inventive thinking, we will activate drawing, color, sound, collage, writing, object making, and other experimental practices. The flow of this working process offers momentum for the CalArts students to mine the experience as an impetus to their personal work, regardless of individual disciplines. Works by artists using strategies of play and chance / order and chaos, including Helen Mirra's walking/printmaking practice, Eva Hesse's drawing process, and Allan Kaprow's performance work will provide a background for discussion. This dialogue will be further invigorated with readings from Hannah Higgins's The Fluxus Experience, Rosemary Peterson's Why Piaget?, John Dewey's experience and education, Mignon Nixon's 'Child' drawing on Eva Hesse, and Richard Shiff's writing on Richard Tuttle's drawing process. This is a cross-disciplinary class; students from all métiers are welcome. Prior teaching experience or visual art background is not necessary. Students enrolling in this course must be in the Santa Clarita or greater Los Angeles area.

Description

This seminar takes its title from an exhibition curated by artist and CalArts faculty emeritus Charles Gaines at UC Irvine in 1993, titled "Theater of Refusal: Black Art and Mainstream Criticism." In his accompanying catalog essay, Gaines situates marginality as always-already political: "Marginal discourse reveals through its complex relationship with the mainstream that 'truth' can more accurately be defined by the Nietzschean and Deleuze/Guattarian term 'power.' Power (maintenance) is the underlying structure responsible for the mainstream's frequent complaint that marginal discourse addresses only minority concerns. Marginality, therefore, is political, is always seen politically by the mainstream." Starting with Gaines's exhibition and essay, this course seeks to identify a number of contemporary exhibitions in which questions of power are raised in relation to difference, whether implicitly or explicitly; often implicit politics are made explicit with protests of an exhibition or its institution. Topics and case studies include the 1993 Whitney Biennial of American Art; the 2022 edition of Documenta; the 1990s Asian-American activist network Godzilla, "Let the Record Show..." (New Museum, 1988) and other exhibitions confronting the AIDS crisis; and indigenous exhibition approaches alongside the Native American Graves Protection and Repatriation Act (NAGPRA) of 1990. We will consider the relationship between rhetoric and gesture in exhibition-making, as well as the lineage of critical discourse around institutions, and the role of print and social media in shaping discourse and public policy. We will read and interrogate texts by curators, critics, and artists including Howie Chen, Aruna D'Souza, Darby English, Okwui Enwezor, Andrea Fraser, Coco Fusco, and Paul Chaat Smith, among others. Students will participate in individual and group research projects, with several reflective writing assignments.

Description

Open to Art School only.

"For the rustle," asserts Roland Barthes, "implies a community of bodies: in the sounds of the pleasure which is 'working,' no voice is raised, guides, or swerves, no voice is constituted; the rustle is the very sound of plural delectation-plural but never massive (the mass, quite the contrary, has a single voice, and terribly loud)." This course will consider the individual and the collective as tactical and historically charged positions for artists, with critical implications for agency and authorship as well as for notions of labor and pleasure. We will begin with Jean-Pierre Gorin's 1986 film-essay *Routine Pleasures*, an elliptical meditation on plural delectation, among other things. Along the way, we will also consider Manny Farber's "White Elephant Art vs. Termite Art," Don Cherry and Organic Music Society, EZTV, the quilters of Gee's Bend, Henry David Thoreau's *Walden*, Simon Leung's *War After War*, Simon Rodia's *Nuestro Pueblo* (Watts Towers), Noah Purifoy and the *Outdoor Desert Art Museum*, the *Center for Land Use Interpretation*, and *Deep Listening Band*, among others. The class will include screenings, readings, discussions, field trips, and student demonstrations and research projects.

Description

This course asks students to develop a collaborative project that will respond to the exhibition "Mobilizing Contents: Feminist Art Program" to be held at REDCAT gallery downtown LA, from Sept 6 to Dec 20, 2023. This exhibition activates the CalArts Feminist Art Program Archive to generate collective knowledges based on artistic experimentation and pedagogy. Multiple readings of the exhibition, as proposed by contemporary artists, will offer intersectional feminist views to dialogue with current social movements and its legacies. We will work together to explore key questions and ideas that emerge from the exhibition by analyzing the show itself as well as the archives that it features, and the

histories and legacies of the feminisms that are claimed. We will explore the context of the show as well as address the larger political implications of exhibition and archival practices to ask if exhibiting feminism can be feminist. What are feminist practices today in art making and curating and how are these informed by or resistant to these precedents? The course involves some field trips to REDCAT at various stages during the class as well as the possibility of realizing a class project at REDCAT in response to the exhibition. These visits may take place on Saturdays. It will be each student's responsibility to get to REDCAT for these meetings.

The History & Now of Motion Graphics

Subject Code	Course Number
AAIC	642

School(s)
School of Art

Academic Level
GR - Graduate

Credit Hours

Min Credit Hours:
2

Description
Motion Graphics (also known as Motion Design) is everywhere. It permeates a multitude of spaces and practices including VR, AR, mixed reality, UI/UX, apps, platforms, games, experiences, and increasingly includes AI. It also includes film and TV titles and branding, filmmaking, commercials, music videos and entertainment design. As a specialized practice, Motion Graphics was first recognized by artist and computer graphics pioneer John Whitney in 1962 when he introduced the term "motion graphics" for title design "as a distinctly new problem for the field of design." He argued that the designer may create great graphics but for great MOTION graphics the imaginative articulation of movement is required. It was just a decade earlier, in the 1950s, that the demand for feature film title sequences and more graphically-oriented commercials grew, evolving from abstract films in the early 20th century. This course will look back and forth between past, present, and future of Motion Graphics through weekly presentations,

assigned readings, and discussion. Students will identify current issues for the field and speculate theoretically towards Motion Graphics as an increasingly significant and meaningful practice.

Description
In the words of a former student, theory is the thinking that advances the discipline. Theory works hand-in-hand with design history, criticism, and practice to support the realization of relevant and meaningful design work that challenges, plays with, or advances what things get made and what they look like. Through required readings, conversation, and research, students will engage various contemporary debates that potentially impact our ideas, practice, and lives. These include such themes as technology, the environment, culture, society, politics, and many others. Please note that this is not a studio class.

Description

This practicum workshop is restricted to Art School BFA students. The collagraph method of printmaking allows the artist to make impressions based on manipulated found materials. Printing blocks are made by adhering found materials to wood, thereby creating unique matrices that can be inked and printed using multiple techniques. Different instructors may approach the method and concept of Printmaking: Collagraphy differently. Attendance at all sessions is required. Limited

to 14 students. (Please refer to course syllabi provided by each individual instructor for more details.)

LA's Artist-Run Spaces

Subject Code	Course Number
AART	048

School(s)
School of Art

Academic Level
UG - Undergraduate

Credit Hours

Min Credit Hours:
1

Description

What makes an artist-run space different from another gallery or non-profit organization? Artist-run spaces are founded by and driven by the ideas and dreams of artists, though they often transform over time. Through a series of case studies, this course offers a brief history of alternative and artist-run spaces in Los Angeles, examining how ideas around alternatives have shifted since the 1970s. We will also look at contemporary artist-run spaces and curatorial endeavors that seek to expand and enrich the cultural landscape. There will be a focus on the sustainability of these projects and we will discuss how they operate in relation to capitalism, systemic racism, able-ism, and gentrification.

AART049 - The Body in 360- Exploring the Spatial

General

Course Long Title

The Body in 360- Exploring the Spatial

Subject Code	Course Number
AART	049

School(s)
School of Art

Academic Level
UG - Undergraduate

Credit Hours

Min Credit Hours:
1

Description

Using our bodies and surrounding environments, we will explore the physical and virtual possibilities of VR filmmaking with the Insta 360 One x2 VR camera. We will research the duality of

physical and virtual world building by looking at the formal relationships between the two, while inspecting the dependency and dissonance of each. Students will learn how to construct movement for 360 capture, film and edit VR footage, and will culminate in an experimental short VR film.

Subject Code	Course Number
AART	050

School(s)
School of Art

Academic Level
UG - Undergraduate

Credit Hours

Min Credit Hours:
1

Description

Whether you are an artist working on their statement, making a book, writing for a contemporary art publication, documenting their process, or simply looking to artist books and writings for inspiration, this course is for you. We will study works by visual artists Sable Elyse Smith, Andy Warhol, Bob Flanagan, Aria Dean, ANOHNI, and more, as well as exhibitions at the Hammer and Brooklyn Museum. Together, we will consider the strategies artists implement to subvert or conform to the medium's conventions, and address the following questions: the traditions we are working in; material conditions of writing; when and how to make writing public; the logistics of publishing including platform, budget, context, impact; and writing as an avenue to create community. We will welcome guest speakers, and you will receive resources to support your writing endeavors at CalArts and beyond.

Description
BFA1 Art Program students will be pre-enrolled in this class, along with What Makes it Art(AAIC-103).

In order to have a better understanding of the work you make and how that work interacts with culture, it is important to begin to grapple with the relationship between your art and art history, the divide between the type of work you now make and the art practice you wish to build, and your awareness of the variety of contemporary art practices. In this course you will wrestle with these and other ideas as you begin your course of study in the Art Program. This course includes lectures, discussions, readings, critiques, in-class projects, and an expectation that you will produce artwork that reflects your interests and ideas. Introduction

to the program's labs (production facilities), course advisement, and field trips are also part of the course curriculum. In short, this 2-part course sequence is an introduction to the Art Program - both as a practical primer to help you navigate the Institute and a conceptual introduction as to how artwork is produced, analyzed and critiqued in a myriad of ways. AART-101 is offered in the Fall Semester.

Subject Code

AART

Course Number

110

School(s)

School of Art

Academic Level

UG - Undergraduate

Credit Hours

Min Credit Hours:

2

Description

This studio-based class complements the Art Foundation curriculum and is structured on class demos designed to introduce basic and advanced painting and drawing techniques. Exploring the materials and methods shown, hands-on working sessions flow directly out of the demonstrations. Readings, slide shows, videos of artists at work, discussions and assignments round out the experience, providing insights into the artmaking process and expanding students' frame of reference. Students should come prepared for sustained studio work in the classroom.

Know-how matters if you want to get where you're going, however perfection is not the objective. Serendipity, happy accidents, and unanticipated moments can lead to new modes of working and spur on ideas. Appreciating uncertainty- the purposeful state of 'not knowing' is something that grows stronger and is one of the advantages of being an artist.

Art Program students at the BFA1 level will be given priority enrollment in the class. The course may be open to other Art students at the BFA2 or BFA3 level by permission of the instructor.

Description

Permission of Instructor only.

Independent Study is a semester-long agreement developed between a student and a faculty member to discuss ongoing work, a particular project, or a course of study.

This agreement, including frequency of meetings and unit value, will be drawn up on an Independent Study Contract.

The Independent Study contract is available beginning two weeks prior to the start of the Fall and Spring term. Independent Studies are not available in the Summer or Winter sessions.

Once submitted, your request will be reviewed and if approved, will be added to your schedule by the Registrar. The contract can be found by clicking "<https://calarts.formstack.com/forms/is>">Here

So, you've taken the Super Shop's Orientation, now what? Looking to fill the vacuum with some tangible building skills? This 6-week technical workshop class might be for you! We will be using Enzo Mari's wooden furniture design classic textbook: 'Autoprogettazione?' as our survival guide. This class will be centered around carpentry basics, utilizing Mari's furniture schematics to build simple, strong, and functional forms. The takeaway will be newfound confidence in the Super Shop's Wood Shop, a piece of furniture for your studio, and foundational fabrication skills using up-cycled lumber. Expect to purchase Mari's textbook, to work hard, to possibly get some wood splinters, and to turn scrap lumber into gold.

UG - Undergraduate

Credit Hours

Min Credit Hours:
2

Description

Drawing is a kind of language, a method of thought and expression. It consists of a mark or line, typically against a blank page, but perhaps on a screen or in the larger world. Artists use drawing to work out an idea, or to analyze a problem. They use it as an activity to open up the imagination, or as an activity to explore the limits of a material. They use it to prepare an artwork, or consider it an artwork in its own right. This class will explore all these possibilities, perhaps more. We will practice some basic skills, and explore a variety of more advanced approaches. This is a studio class, so students will be expected to make drawings. To facilitate that, we will meet for 6 hours, every other week. During class time we will consider the drawings of some contemporary artists and work through various exercises and assignments. Students will also be developing a portfolio of drawings to share at the end of the semester, in class or in one of the Art School galleries. There will be a fee to cover materials.

Description
What does it mean to have the basic necessities of
life? Are food, water, and shelter enough? Do we
not need human interaction, culture, and art? We
will engage basic survival strategies, from
gleaning to codeswitching, to address questions of
environmental need and sustenance, identity and
belonging. Sculpture projects will involve making
devices for foraging food, building shelter, and
constructing community. Artwork will be born of
necessity but driven by aesthetics, using our
hands to shape the world we inhabit. We will
employ sculptural methods developed throughout
human history to confront tensions between
individual desires and collective societal needs.
Our goal is to illuminate our choices and how they
impact survival.

Description

This is a production studio course for artists on creating/directing narrative scenes/vignettes. This is an intro to narrative for camera. Students will plan, structure, shoot and edit two given dramatic scenes with the goal to understand and potentially experiment with basic narrative form. If time allows students will create their own short dramatic vignette for critique.

Course Long Title
Drawing, a Verb

Subject Code	Course Number
AART	210U

School(s)
School of Art

Academic Level
UG - Undergraduate

Credit Hours

Min Credit Hours:
2

Description

Drawing, a Verb is a gathering space for students who love to draw. We will meet weekly for improvisational drawing that is followed by an open critique of drawings created in class. During each session, students will be provided with drawing material and tools, but still, they are also required to bring additional pencils, pens, sketch pads, and tablets. This is not a technique-focused class, it is a production-focused class. Students from all drawing skill levels are welcome!

Description

Feminist Quilting Bee is a sewing/pattern-making studio class that explores how artists create new artworks while gossiping, warning, and informing one another as a form of care. Deeply informed by feminist essays such as Kwame Holme's "What's The Tea: Gossip and the Production of Black Gay Social History," and Alessandro Portelli's "What Makes Oral History Different," and Katrin "Horn's Of Gaps and Gossip: Intimacy in the Archive," this course will use a variety of current discussion of feminist social topics as case studies to be workshoped and explored during sewing class.

In this course we will learn the fundamentals of your sewing machine: repair and cleaning alongside demonstrations in pattern making, riveting, applying batting, stitch, correcting, banner design, sail making, and building with industrial sculptural fabrics. We will explore a variety of contemporary and historical approaches to archiving textiles, which includes how we describe, catalogue, appraise, and restore quilts.

Description

This introductory Sculpture class is designed to introduce you to the world of object making. To make sculpture is to learn the craft of orchestrating relationships of material and process with form and presentation. It is to learn how a physical thing - an object - might suggest a feeling, embody an idea or elicit an intuition.

As an introductory sculpture course, you will explore the basics of sculpture - scale, form, volume, gravity, structure, extension etc. We cover both additive and reductive processes and there will be an emphasis on the development of form and structure particular to each process.

The other experience found within the course is more private and internal and concerns you becoming more cognizant of the way you think, more perceptive about the way you see. You will enhance your corporeal awareness in relation to material. These are for you to discover and are foundational to defining your voice.

Course Long Title

Open Critique

Subject Code

AART

Course Number

300A

School(s)

School of Art

Academic Level

UG - Undergraduate

Credit Hours

Min Credit Hours:

2

Description

Open to Art School only. This course may be open to students at other year levels, and in other Schools, by Permission of Instructor. Open Critique is a venue for students to critically examine their work in the context of a peer dialogue guided by the instructor. In order for students to take advantage of the diversity of approaches offered by our regular and visiting faculty, this course is designed to be taught by various instructors in each semester and multiple sessions of the same course will be offered in the same semester. Please refer to course descriptions by each instructor which specify how the individual critique session will be structured.

This course will push the work of the serious artist with thorough, rigorous critique. The intention of each student will be the beginning point from which we, as a group, will investigate and interrogate the results of works both in-progress and newly completed. Contemporary discourse will revolve around the interplay of ideas and the materials from which they are realized. In a world where any material can be considered as a source for artistic production, this course will place special emphasis on why particular materials are chosen, their histories and inherent meanings, how they are manipulated, and their successes or failures in conveying the intention of the maker. Beyond intention, we will also leave room to examine and discuss the importance of how the "unexpected" or "accidental" plays into artistic production and the development of new ideas. Participation and attendance from everyone is mandatory. Two to three students will present their work each week.

Description

This class will be a laboratory of the quotidien. Everyday crumbs swept together hastily. Small irresolute gestures, form on the move. Every session; a reading, a screening, and some words that deal with dailiness, alienation, time, process, history, change, observation, and difference. We will help each other see what we make anew. You will bring one work (object, text, installation, performance, whatever) starting the second week, and bring that same work back every week "changed." Change for us is broad. It can be a material, observable change, or it can be a shift in your disposition toward your thing. We will observe and make meaning of those changes together.

Description

This sculptural crit focuses on the development of each student's personal artistic voice. The goal is to strengthen student's understanding of their own sculptural work and how it relates to the broad range of techniques, forms and ideas that comprise contemporary arts practice and critique. Students are expected to be self motivated and encouraged to investigate different forms and modes of working, including the still image, time based media, installation, interactivity, and live art performance in an interdisciplinary environment. Students will participate in weekly critiques, developing rigor in their ability to see, describe, assess, understand, contextualize, and discuss their own work and the work of their peers. Two students will present their work at each session, giving ample time to dive deep into each practice. Students will be asked to share all research behind the work.

Course Long Title

Queertiques

Subject Code

AART

Course Number

300L

School(s)

School of Art

Academic Level

UG - Undergraduate

Credit Hours

Min Credit Hours:

3

Description

Queertiques is an interdisciplinary critique course and seminar open to upper-level undergrad and grad students within the School of Art, and from other Schools with instructor permission. Queertiques or Queer Critiques embraces bell hooks and Tim Dean's terming of 'queer' as being about the self that is at odds with everything around it and that has to invent and create and find a place to speak and to thrive and to live. Students will read and discuss critical-theoretical texts that center intersections of queerness with gender, race, class, and ability; and examine how critical queerness has historically manifested via varied formalisms, materialities, methodologies, and artistic praxis. We will critically engage with the politics of visibility and institutional critique, as we interrogate the coopting of queerness and other marginalized identities within institutions, the art market, and beyond.

Students are expected to maintain an active art practice, and to complete and present their own projects and exhibitions (including thesis exhibitions) for peer-driven, intimate, and in-depth critical discussion. This course offers students language, theory, community, and an intro to a queer artistic canon that will enable students to interpret and articulate the queer content in their own and each other's artwork.

Academic Level

UG - Undergraduate

Credit Hours

Min Credit Hours:

2

Description

Sensing Crit: Do U Love What U Feel? is a critique course that provides an opportunity to share work for critical feedback up to three times over the course of the semester. This course offers multiple in-depth critique approaches, including somatic, practice-based, and research methodologies. We experiment with looking and sensing through material investigation while deepening our practices via communal reading, somatic awareness, reading and writing. Sensing Crit: Do U Love What U Feel? develops engagement via discursive relationships built upon artists' work and works-in-process while highlighting the artist-to-artist relationship. This supportive approach offers critical witnessing, empathetic feedback, and somatic engagement to deepen our practices of seeing and feeling through material, semiotic, physical and breathwork methodologies. Recommended for students experimenting across mediums (inter- & cross-disciplinary) *and* metier-specific students who seek to expand their approach while challenging themselves via collective imaginaries, which necessitate involving diverse paths, questions, and experimentation.

Description

This kinetic sculpture course is about making things that work and going deep into our problem solving minds. We will aim to demystify and employ analog electronics and mechanisms, study organic and engineered systems and energies, and explore the manifold ways to design and make things move in service to artistic vision.

This studio-oriented class, with a strong physical basis, will include metal and wood shop technical demonstrations and ongoing advising. Students will be integrating movement into the design of the work, hence we will consider, e.g., structure, force, vibration, and balance as we cover various building techniques, the physical properties of materials, and material connections (literally the nuts and bolts of making). Students will gain a foundational knowledge of mechanics and analog electronics (motors, gears, springs, solenoids, relays, pumps, etc) while also highly encouraged to explore alternative energy sources (wind, water, thermal, magnetic);

Consider making art as though the earth really matters.

The goal of this class is to make things that function and stay together. The process of idea to objecthood will include sketching, technical drawing, problem solving, project planning, model making, and experimenting/testing. Students will keep a sketchbook dedicated to design development.

Readings and group discussions will include a survey of kinetic and mechanical art as well as explore commonalities among selected environmental, social, and engineered systems: physical properties, mechanical characteristics, correlative motions or states. We will strive to expand our technical vocabulary and

knowledge of scientific concepts through the investigation of these systems and our relationship to them.

Course Long Title
Mixing and Modifying Ceramic Glazes

Subject Code	Course Number
AART	310Y

School(s)	Program(s)
School of Art	Art

Academic Level
UG - Undergraduate

Credit Hours

Min Credit Hours:
2

Description
This independent study group will focus on researching and developing ceramic glazes from raw chemicals. Students will choose a type of glaze and/or color to develop throughout the semester beginning with published glaze recipes and modifying those recipes to generate custom colors and characteristics. Students will learn (1) to identify glaze chemicals and their attributes, (2) the process of experimentally adapting glaze recipes to achieve the desired result, and (3) techniques for loading and firing electric kilns. Students will meet independently with the instructor throughout the course and will be expected to present their findings at the end of the semester. There is a \$50.00 course fee which will provide the raw chemicals, clay and supplies needed for the semester. Due to the nature of the chemicals involved in glaze chemistry, students will be required to provide their own personal protective equipment including disposable gloves and a particle respirator.

Simple Requisites

Clay, Light and Shadow and/or Pushing Towards Center
Type
Prerequisite

Earn a minimum P of undefined in the following:

- AART311C - Clay, Light and Shadow
OR AART511C - Clay, Light and Shadow
OR AART311P - Wheelthrowing, Attention, and Rest
OR AART511P - Wheelthrowing, Attention, and Rest

Course Long Title
The 360° Narrative

Subject Code Course Number
AART 311B

School(s)
School of Art

Academic Level
UG - Undergraduate

Credit Hours

Min Credit Hours:
3

Description
This class will explore the idea of multiple narratives being told at once, while all holding their own identity and equal ground, but yet becoming one. Students will contemplate how each narrative element relates to one another, both in harmony and disharmony. Plus, they will become proficient in paying special attention to the stories that arise from the space in between elements. And students will learn to be wary of narratives that dominate and invisibilize other narratives, along with how to subvert this domination. They will also acquire multifaceted and spherical storytelling skills in various mediums, including writing and 360° VR video making. In addition to learning how to craft these multifaceted narratives, they will be encouraged to grapple with and account for the agency of a viewer/reader who is no longer trapped by a limited gaze. Due to the limited amount of 360° VR cameras, this class will be strictly limited to 9 students.

Description
This course will cover the processes for constructing three dimensional sculptures and objects in clay while exploring the material and metaphorical relationships between light and shadow. Through exercises in experimentation, we will work with intuition and chance to channel shadow energy as a generative creative process. Projects will explore archetype through Jungian and tarot imagery as well as combining clay and

light through reflection, obfuscation and translucency to illuminate space and architecture. We will learn the processes for constructing three dimensional sculptures and objects in clay and undertake the fundamental methods for building including slab and coil and traditional finishing techniques such as firing and glazing.

Students will be encouraged to apply these techniques both in the construction of static objects as well as experimenting with incorporating the material into other areas of their practice. The class will culminate in a group exhibition and critique. 25lbs of clay will be provided to each person though students should be prepared to potentially purchase additional material if their proposed projects require it.

General

Course Long Title
Sound Affects - Sound Art

Subject Code	Course Number
AART	311E

School(s)
School of Art

Academic Level
UG - Undergraduate

Credit Hours

Min Credit Hours:
3

Description

This course will include a series of lectures, workshops, and assignments with emphasis on experimentation and pre-production strategies and techniques for capturing, creating, reproducing, and manipulating sound and audio materials in conventional and unconventional ways. We will study the physics of sound and acoustics. Readings will include texts on a variety of topics including the history of sound art, technical audio recording, psychoacoustics, physics, and affect theory.

The students will be introduced to analog recording and reproduction materials and techniques. We will experiment with and exploit the unique qualities and limitations of analog media before moving into a series of introductory digital recording workshops. Working within the limitations of this physical material will position us to engage in more nuanced analysis of techniques and critique of intention and content when later working in the digital realm (of seemingly infinite possibility.) Additionally, we will be recreating selected analog media sound art works as part of our process of discovery and experimentation.

We will engage in a practice of tuning our aural faculties through both deep and reduced listening. If one breaks music and sound down into parts (intervals, timbre, rhythm, pitch, prosody, etc) does that negate the sound itself? How does that analysis affect our holistic experience? For the purpose of this class we will be breaking sound down into parts but remain always mindful to continue a discussion of how what we are hearing is inextricably situated in our environment.

In our study of acoustics students will also learn how to "tune a room": how to identify and work with the resonant characteristics of installation/performance spaces, consider how and where the work is presented and how that space acts as an active "participant" affecting the performance/presentation/perception of their work.

Description

"First forget inspiration. Habit is more dependable. Habit will sustain you whether you're inspired or not. Habit will help you finish and polish your stories. Inspiration won't. Habit is persistence in practice." Octavia Butler, Bloodchild and Other Stories

In BUILDING&BREAKING will focus on interdisciplinary, exploratory, conceptual, somatic, & material processes, for building and breaking into the notion of "having, building, making, exploring a daily practice."

BUILDING&BREAKING will explore techniques such as Somatics, Scores, Algorithms, Play, News Exorcisms, Internal-External Observation, and other creative approaches. Diving into practices that build habits and/or break from routines, we explore how we might develop them through spatial and sensory activities, repetition, meditation, excess, communication games,. We will apply notions of rest, observation, and recuperation to our accompanying Reading, Writing, Moving, and shared Research - group and solo.

BUILDING&BREAKING aims to support students at all

stages, in any medium/school through the commitment of opening to experimentation that unearths our relationship to new and old habits, reorienting how we imagine success and failure while engaging in the potencies of discovery and loss.

Description

Making Bodies is a materially-driven sculpture studio course open to intermediate and upper-level undergraduate and graduate students that aims to generate alternative ways of viewing and understanding bodies. Students will manipulate materials to reimagine what bodies can be, what they can do, how they signify, and how they can resist and challenge common and reductive conceptions of essentialized bodies and identities. Students will use a variety of different processes-from casting, creating assemblages using found materials, and experimenting with developing your own techniques and gestures of material transformation. The course incorporates readings, presentations, and discussions on the critical role of sculpture in the societal construction of bodies in conjunction with race, gender, and other identities within systems of power and privilege. We will look at contemporary artistic practices that push the limits of sculptural traditions and hierarchies as a means of producing alternative ways of engaging with racism, sexism, transphobia, and other social justice issues while expanding the discourse of sculpture.

Description

Engaging both the pragmatic and the imaginative, this sculpture course explores a singular material that lends itself to a variety of methodologies, processes, and associations. Throughout human history wood has lent its strength to functionality and its beauty to ritual and we will make use of both practicality and aesthetics to meet our needs in this class. Students will realize several sculpture projects over the course of the semester that will be assessed in group critique. There will be readings, writing assignments, technical instruction and lectures. In this course students will gain experience with a range of tools, from the stationary power tools in the wood shop for expediency and precision to traditional hand tools for embodied experience. However, this course is not about technical mastery, it is about introduction to possibilities. Because we will be focusing on wood

for the entire semester, students will have a great opportunity to explore and access a large number of conceptual and expressive possibilities.

Description
Reappropriating objects, from the insignificant to the monumental! This sculpture course connects the present to the past; examining various contemporary art practices as well as functional, craft based processes from around the world. Students will be encouraged to experiment with materials they may not have considered viable; incorporating objects from their immediate environment (natural and recycled man-made), strengthening their ability to see sculpture in the every day. This class is structured around assigned studio projects that closely consider form and content. Students are expected to engage in rigorous analysis and discussion, helping to push each individuals work to the next level. Learning the balance of viewer consideration, while honoring the artist's original vision; culminating final projects will emphasize storytelling and world building through sculptural installation.

Description
Throughout this studio class, we'll attempt to deconstruct the relationship between listening to music and painting as practice. Visual artists have always been influenced by music. Some show the specific influences of music in their work, like Corita Kent or Dave Muller. Others, like Jack Whitten, credit music as a motivation for ideas, concepts, and feelings in their paintings.

In some ways, maintaining a painting studio practice is an isolated existence. Many hours are spent alone with one's work, thoughts, and decisions concerning fluid mediums. Music can be an accomplice in this endeavor; it can inspire movement, entice action, or simply support with a warm atmosphere. During this class, each student will be asked to work on paintings in the classroom, complete readings, and create a playlist or select an album for our weekly painting sessions. These weekly music selections will be accompanied by a brief presentation by the student/selector.

Credit Hours

Min Credit Hours:
2

Description
Making art at human scale. Internalizing the skills and process of wheelthrowing while disentangling from externalized attention economies and reprioritizing intra- and inter- personal connections. More simply; each week a group of students will meet with me to practice wheelthrowing, share ideas, share snacks, go for walks, read books outside, birdwatch, maybe even take a nap in the sun. We will learn how to wedge, center, throw, trim, glaze and fire (mostly) functional art objects. The semester concludes with a meal using our vessels. Note: All students enrolled in the class will be required to delete or suspend activity on all social media accounts for the entire semester. Also, students will be required to purchase three books, a pottery tool kit and clay.

Description

This course will explore the realm of earth materials as an art material from the perspective of environmental justice. We will consider the dichotomy of judgement between that which we call dirt versus soil, as well as related topics such as extraction, pollution, waste, live earth and ceramic clay. Visits to various sites through the term, including industrially impacted zones, will be supplemented by readings and films. We will get our hands dirty both through volunteer work and making art directly with or inspired by these earthen elements.

Description

After a long period of marginalization, the interest in using craft methodologies in contemporary art practices has surged in recent years. This course will provide students with an inclusive framework from which to consider the use of traditional craft processes in creating art that explores issues relevant to students today. Throughout the term, we will work hands-on with media such as ceramics, paper making/ paper sculpture, dyeing with natural materials, soft sculpture/ quilting.

This course will introduce students to traditional and contemporary craft practices through the process of making, looking, reading, writing. We will learn about historical precedents and concepts such as Mingei, "Sloppy Craft", Minimalism, etc via discussions, readings, and slide presentations. Students will work with various sculptural techniques including ceramic slab and coil building, natural dyes, quilting/ Soft sculpture, and papermaking. Critical thinking, creativity and experimentation are encouraged.

Description
Work, Unwork, Postwork and Labor in Capitalist Realities

When we speak of work, we speak of a broad social and material construct, crucial in shaping experiences of reality and contouring the production of subjectivity. This understanding is rooted in a critical tradition that begins with Marx's notion of estranged labor, and continues through recent feminist critiques of the concept of work ethics. These analyses place the experience of work at the epicenter of our existence, operating as an ideological mechanism that promises perpetuation and legitimization of the individual's life via routines of normative and moralized tasks. This seminar attempts to examine this notion of work and work ethics alongside artistic practices who understand cultural production to be enmeshed in a larger system of labor relations, and inherently connected to contemporary social and political movements. Our analysis will consider different working practices from a discursive and practical perspective through reading discussion, workshops and field trips to diverse materializations of 'workspaces'.

Description
Open to BFA3 and BFA4 students in the Art Program.

Performance as an artistic (anti)disciplinary field is often historisized as emerging from a will towards immateriality, grappling with art's commodity status and situating its practice at the threshold between theatricality and objecthood with the body as its common denominator. This rather young classification of post-1945 object-rejecting practices allows us to put them in conversation with different historical incarnations of the culturally situated movement of bodies in space that precede this terminology.

In this seminar we will consider the different histories of the purposeful mobilization of gesture, thinking about the difference between performativity and performance, the role of the moving body in the process of identity formation, and the relationship of these practices with the notions of ritual and spectacle. Following the idea that reality is constantly being built by the fleeting citation of the past existing in every gesture--from minuscule actions like brushing our teeth to highly connoted ceremonies like a handshake or a burial--I want us to think, through readings and exercises, about the power and potential that exists in the re-doubling and recontextualization of specific movements into an artistic manifestation.

Looking together at diverse incarnations of performance and ritual we will analyze their relations to a historical and social context, their strategies, and we will devise our own sequences imbued with personal meaning and mythologies. This seminar involves readings on performance's and performative theory, collective watching of documentation and the realization of exercises conceived to foster different approaches to action and gesture in order to rethink our own rituals, their meaning and origins, their world-building power and their relation to the notion of spectacle and sight as a mode of perception.

Postcolonial Theory: History, Experience and Aesthetic Implications

Postcolonial theory (also referred to as anti-colonial theory) emerged as an activist and cultural production in reaction to the violent colonization processes carried out by European imperial powers such as the UK and France during the XIXth century. After decades of material, discursive and political oppression at the hands of Western countries that were economically exploiting different African and Asian regions, a series of thinkers started rendering their experiences as colonized subjects visible, analyzing the horrific effects on the colonized subject of this mode of repression. Rather than simply rejecting European culture, postcolonialism focuses on the complex modes of hybridism generated by the relationships between colonized countries and the imperial powers they found themselves tether to. Using as its point of departure the cultures and ideas of those liberated from or still resisting European domination, this body of theory sheds light on the effects and affects produced by this socioeconomic phenomenon, whose consequences are of crucial importance in today's geopolitical and global landscape. This reflects the dynamic role the cultures and ideas of the formerly colonized and the still racialized and otherwise socially dominated play in today's world. This class will begin by examining some of the major theorists in the field, including Aime Cesaire, Franz Fanon, Edward Said, Gayatri Chakravorty Spivak, Homi K. Bhabha, and others, while simultaneously looking at different art works and practices that deal with the consequences, circumstances and specificities of colonial ruling over the cultures it intervened. Other writers we will look into are Simon Gikandi, Edwidge Danticat, Edouard Glissant, Jamaica Kincaid, and Robin Coste Lewis.

Open Seminar is a series of seminars of special topics chosen by the instructor.

Description

Open to BFA 3 & 4 students in the Art Program.

Resistance comes in all forms. This course will delve into resistance in the form of art and introduce community based activism as a crucial point of origin for such a type of resistance. It will review a variety of historical and contemporary works of art as resistance in and outside of the fine arts world, and communally discuss the impact that each work has had on social justice movements and / or the larger world. Students will also study community activist frameworks that can inform such types of resistance work and why such frameworks are necessary. This learning process will be aided by Zapantera Negra: An Artistic Encounter Between Black Panthers and Zapatistas a book that documents an artistic encounter between Emory Douglas, the Minister of Culture of the Black Panther Party, and the southern Mexican indigenous revolutionary group EZLN aka Zapatistas to not only artistically collaborate but to also address the question of what is the role of revolutionary art in the times of distress? And will use the work of the American author, women's rights activist and black feminist, Adrienne Aaree Brown in Emergent Strategy: Shaping Change, Changing Worlds which lays out activist frameworks of community mindful and politically intentional strategies for a better world.

Open Seminar is a series of seminars of special topics chosen by the instructor.

Description

This course will explore love as a source of guidance and nurture for the artist who makes. It will begin with the proposition that love is a philosophy with the capacity to transform stagnant and dire social and material realities, while also undertake an examination of how love has been co-opted by capitalism, disregarded as unnecessary by pop culture, made to be silly by academia, and socially reduced to a phenomena that can only happen within the couple form or nuclear family unit. Students will also become familiar with works of art and social movements that center/ed love or the qualities of love as a primary medium or theme for their making. And students will collectively contemplate and critically analyze love's potential and its ability to hold up against their own socio-political realities of making new things and a new world to accompany the things they make.

Description

"Tech Nightmares, Illusions of Control" is a hybrid seminar + practice course conceived as a critical survey on different positions that articulate rejection, skepticism and resistance to the current developments of information technology. Throughout the class we will engage with a wide range of materials, from classical historical examples like the Luddite movement during the Industrial Revolution, to more contemporary critical perspectives on the effects and implications that our present reliance on technological devices, screens, the internet and data management systems have for our forms of socializing, governmentality and participation, and therefore our sense of politics and the self. Departing from early analysis like Richard Barbrook and Andy Cameron's essay "The Californian Ideology," or James Brook and Iain A. Boal's compilation "Resisting the Virtual Life" we will look at the often disregarded politics surrounding the beginnings of the 'world wide web', the types of dialog, community and participation generated by online communication as well as the effects on work, social relations, and intimacy of these technological prosthetics. The course readings will be complemented with exercises and performative prompts conceived to test and manifest the types relationships we establish with different devices and applications.

Credit Hours**Min Credit Hours:**

3

Description

"Propaganda that stimulates thinking, in no matter what field, is useful to the cause of the oppressed.

Such propaganda is very much needed. Under governments which serve to promote exploitation, thought is considered base." - Bertolt Brecht

This course will be divided into two parts. The first half of the semester we will look at propaganda through an expanded lens. We will ask when and why does propaganda arise, with what means and toward what end? We will not only read into, analyze, and critique that which is clearly identified as propaganda, but we will also look at artworks, essays, poems, and gestures as vehicles of manipulation.

We will look at propaganda as an ambivalent act, and as a possibility within our practices. The second half of the semester we will individually or in groups establish an urgent truth and materialize it. We will enter a process of iteration and critique, mutually aiding each other's projects. The class will end with a presentation of what was made, and it will be discussed with a newfound vocabulary around the formal possibilities of propaganda.

Description

Welcome to Migranthood!

Speaking at a conference on identity in 1987, Stuart Hall said, "My own sense of identity has always depended on the fact of being a migrant.. [Now] I find myself centered at last. Now that in the postmodern age you all feel so dispersed. I've become centered: what I thought of as dispersed and fragmented comes paradoxically, to be the representative modern experience. Welcome to migranthood!"

This seminar will primarily engage the works of Sylvia Wynter, Stuart Hall, Frantz Fanon, Edouard Glissant, and C.L.R. James. What about the geography and history of the Caribbean harbors such groundbreaking perspectives? All these thinkers have provided frameworks that speak to

not only their specific conditions, but seem to hold truths worth articulating in our increasingly destabilized, dispersed, globalized present.

We will approach seminal texts by each of the above authors in relation to the specific social forces of their time. We will also pair the texts with corresponding influences and discourses: Gramsci with Hall, Marx with James, Foucault with Wynter and psychoanalysis with Fanon.

Also, through the work of Dionne Brand, Steve McQueen, Sung Tieu, many others we will think about how the above discourses can make their way into literature, film, installation and other forms.

Lastly, we will continually focus on the relationship between theory and praxis in the works and lives of these individuals and in our own lives.

Description

Friends Playing is a studio-seminar course in which we will look at friendship and play as two necessary components of a future yet to be imagined or narrativized. Wherever we look we see private property and individuals navigating the world alone with their things and their goals. We see folks prioritizing individualized notions of progress while abandoning friends and play. Through the act of playing and some light study around the historical and economic relations at play in play, we will create together ways of getting toward new freedoms. Bring your friends, make new ones, we are here prioritizing what may actually get us somewhere.

Description

This is a class about ghosts. In this course, we delve into the haunting legacies of forced removals and violent dispossession, exploring how their affectivity and materiality persist through time in archives and historical records that are filled with countless gaps and omissions. We will think through the potential implications of adopting Derrida's hauntology, Benjamin's angels of history, Hartman's critical fabulations, Barad's quantum physics and the entanglement of matter and meaning, as well as many others as a framework for critical heritage practices and counter-histories. By employing pedagogical concepts such as sensitivity to nonlinear time, indeterminacy, and discontinuity, we confront the quantum specters of multiple pasts, presents, and futures or what I propose to name "quantologies". This approach offers a nuanced understanding of justice, challenging the constraints imposed by modernity, historicity, and teleologies shaped by revolutionary Marxisms. Join us as we navigate the complex terrain of memory, trauma, and resistance in our exploration of ghosts and their enduring significance.

Description

"There are at least two kinds of games. One could be called finite, the other infinite. A finite game is played for the purpose of winning, an infinite game for the purpose of continuing the play."

In this advanced seminar we'll use James Carse's notion of FINITE AND INFINITE GAMES to launch and frame a deep-dive into theories related to and branching off of the collision of indeterminacy, play and the notion of the Conceit. Subjects discussed may include: states of exception, pretending, temporary consensual agreements (rules) and frameworks, norms, radical free will, belief(s), thought experiments/mentation, art discourse (the idea and function of the Score, the Premise, the Experiment and the Exhibition), participation/assimilation (opacity), submission, game design (failure/success/learning), emotion as experience, the Real, conscious enculturation, vulnerability/gamification, fiction as game, non-fiction as game, panpsychism, the Performative Utterance, logical fallacies, generative false analogies and life as play and possibility. Additional readings may include selections from: Chandra Prescod-Weinstein, Gregory Bateson, Buckminster Fuller, Édouard Glissant, David Bohm, Karen Barad, Ray Kurzweill, Rosalind Krauss, and Roger Cailliois.

"A finite player is trained not only to anticipate every future possibility, but to control the future, to prevent it from altering the past. This is the finite player in the mode of seriousness with its dread of unpredictable consequence. Infinite players, on the other hand, continue their play in the expectation of being surprised. If surprise is no longer possible, all play ceases..Because infinite players prepare themselves to be surprised by the future, they play in complete openness. It is not an openness as in candor, but an as in vulnerability. It is not a matter of exposing one's unchanging identity, the true self that has always been, but a way of exposing one's ceaseless growth, the dynamic self that has yet to be.To be prepared against surprise is to be trained. To be prepared for surprise is to be educated."

Description

This class will be a collaboration across three art schools, CalArts, HDK Hamburg, and KABK The Hague, and will attempt to create community through both digital and material means, framed through a reconsideration of Mail Art. Mail Art flourished in the 1960s and 70s, before budget airlines made it possible to visit other countries and continents cheaply and easily. It was an economic way for artists to make long distance connections and create artworks that were both ephemeral and immediate. After more than two years of social isolation, it is possible to travel again, but prices are rising, and not everybody feels safe. What if we were to reconsider the possibilities of the international postal system.

Description

This class will consider absence (also known as "negative space") as content and a composition tool for creating installations, sculptures, and conceptual art works. This class focuses on the presence of absence, and will consider the political and commodity value of absence. This class also aims to consider "absence" in relation to art production effected by newer social behavior that is evolving in the current global

pandemic.

While many past and current artworks will be referenced in class discussions, together we will closely examine these artworks: Lee Lozano's "Drop out Piece" (1970); David Hammons "Blizzard Ball Sale" (1983) and "Day's End" (2019); Doris Salcedo's "Shibboleth" (2007) and "Fragmentos" (2018); as well as two Whitney Biennial 2022 artworks, Raven Chacon's installation "Silent Choir", and EJ Hill's pink page* (*This piece has no title or listing, only a pink page in the Biennial catalog). I will be instructing weekly exercises for composition based on my practice with installation, performance, sculpture and conceptual art. The writings on human strike by the conceptual art duo Claire Fontaine, and "Positive and Negative Peace" essay by Johan Galtung, will be central to reading for class discussions.

Over the course of the class, students will participate in 2 critiques of their artworks that reflect the themes of the class. One presentation must be of new work created specifically for this class. Student's projects will be encouraged to consider installations in sites off campus as well as in studio.

Description

Join me in inquiry and research of the following: What does a sculptural practice look like when it is sustainable for our ecosystem, finance, and mental health? How do we reframe constraints and policing as possibilities and liberation? Operating on materials (with its extraction and production), fabrication, transport and real estate, sculpture is particularly positioned to examine various injustice inherently in the art infrastructure today. How do we disentangle obfuscating notions such as "art effectiveness" or "claiming moral high ground"? If the logistics associated with exhibition-making is unsustainable, shall we ask if exhibition is essential? And what lessons have we learnt from the pandemic about sculpture's incompatibility to

screen mode? No answers or "solutions" will be offered, only discursive space for your praxis. Students' research presentations will be augmented by assigned readings and guest speakers.

Description

This seminar/practice course is a hands-on observation on how our art experiments, mediums and subjects are altered by the language of persecution. Can text be the starting point to split, cut, and interfere our interdisciplinary practices? Through a micro-politic of text, bodies & surfaces, we will reflect on topics of escape, disappearance, and eruption; followed by weekly prompts to make artifacts, pamphlets, actions and performances that are out of view, half constructed, or in hiding. We will review video actions from Colectivo Acciones de Arte (CADA), Laura Aguilar's desert photographs, Xandra Ibarra's performance-sculptures, Park McArthur's film Day, Etel Adnan's paintings and poems, David Wojnarowicz's Memoir of Disintegration; and intersect them with political actions done by BLM, Act Up and The Young Lords in the US, Galería Cima and FPMR in Chile, South Lebanon's Liberation Army, Anti-Apartheid Resistance in South Africa, among many others. Writing in this case is a mark to acknowledge our presence within or outside borders of oppression. Each session will give us the opportunity to reinterpret history using our own artistic languages and mediums. Collectively, we will move from the studio to the streets, and from public space back to the studio. Materials used in this class are: a phone camera, hardened paint, choreography, synthesizers, trash, singing voices, and the unframed canvas damaged during installation. Recommended for students with interdisciplinary interest across the Institute.

Description

This course is a studio-seminar course for advanced undergraduate and graduate students that focuses on intersections of performance art and sculpture, centering relationships between deviant materiality, bodies, and the performance of objecthood. Students will work on creating, reading about, discussing, and critiquing artwork that explores the deviant, queer, and fugitive capacities of materials, and expands ideas around embodiment. We will examine the artwork of primarily queer/trans/femme/disabled/BIPOC artists from the 20th century to the present who countered the harmful effects of the systemic objectification and violence against their bodies by reimagining and re-performing objecthood as a way toward agency. Students will reconsider common modes of figuration to question commonly held beliefs of which bodies are natural or unnatural, and experiment with tactics of abstraction for the hidden, uncomfortable, unresolved matter that refuses to cohere into representative bodies that are subject to systemic control and surveillance. In addition to studio-based projects, students will work on critical-theoretical reading and writing assignments, presentations, and actively engage and collaborate with peers through in-class discussions, peer critique, research, and other assignments related to course themes. We will read and discuss issues within critical race theory, queer theory, concepts of abjection, performativity, drag, virtual bodies, and other ideas and artistic provocations that may inform a reimagined conception of human bodies, nonhuman objects, and things.

Description
Through engaging in various creative forms, including drawing, photography, performance, video production, and sonic exploration, students will critically analyze and reimagine the ancient past, challenge cultural norms, and cultivate a sense of community through collective experiences. This course explores the rich cultural heritage of the ancient Americas, focusing on civilizations such as the Inca Empire, Aztec society, indigenous communities from North America and from the Amazon Rainforest. Students will explore how these cultures utilized art as a means to communicate with the divine, document their histories, and stimulate connections within their communities. By actively participating in activities such as observing celestial patterns, making videos that capture concepts like "oneiric heritage," and exploring the sonic realm through recording and audio playback, students will cultivate approaches to their own artistic expression. Additionally, they will develop a critical mindset to analyze cultural norms and acquire the capacity to individual and community awareness through their own artistic endeavors.

Description
During this class, we will explore the historical, political, biological and geological dynamics that have shaped the coast of Southern California. Committed to a site specific model, this pedagogical approach will focus on indigenous approaches and historical accounts, California/ U.S. land use of the coastline, and artists who integrate landscape, history and the environment in their practices. Every other week we will visit a unique site located directly on the coast. These visits will

include the Wishtoyo Chumash community in Malibu, the State Park situated between Camp Pendelton and the San Onofre Nuclear Generating Station in Orange County and the intertidal zone and Los Angeles Port of San Pedro. This class will involve substantial readings, involved discussions, and moderate hiking (swimming is optional). Artists and writers we will look at are: Porfirio Gutierrez, Miguel Leon-Portilla, Thomas C. Blackburn, Agnes Denes, M. Kat Anderson, Mike Davis, Damon B. Akins and William J. Bauer Jr. among others.

Description
Do you question everything? Do you have a question for an answer? Let's talk about processes, and expand our methodologies of cyclical discovery. Let's question, conduct research, form hypotheses, create experiments, annotate data analysis, get to a conclusion, and communicate the results/anti-results. And then, let's start all over again.

In this class, you will explore your language (that's you, your work, and your experiences), work in collaborative exercises, gather empirical and theoretical evidence, and expand your material knowledge through different workshops.

Description
This class will position a variety of earth inhabitants (both human and nonhuman & both living and "nonliving") as teachers & potential collaborators for artists. As a site based and hands-on class we will focus on one earthling and its extended ecosystem. We will review the work of artists, indigenous leaders, theorists,

naturalists, conservationists, and environmental educators and we will partake in field trips, technical and material workshops, and group discussions. Over the course of the semester, students will be expected to work on an artwork exploring content related to class, which will be presented in a group exhibition.

Description
This course explores postcolonial, decolonial, and anticolonial theories, poetics, and art in order to expose students to varying theoretical and discursive frameworks and art practices that can help inform their intellectual journey and creative work. We will explore a variety of topics including precolonial meaning making, subaltern studies, global diasporas, resistance movements, and political critique, as well as the work of artists around the world making work reckoning with their complexities and challenges. This course is meant to motivate deep reflection of the political and historical themes that are relevant to the student's work. Class assignments will include writing reflections on the reading and artwork, as well as making creative projects that engage the material. Students will have the opportunity to respond to texts through a variety of mediums, including visual, sound, and performance art.

Description

Permission of Instructor only.

Independent Study is a semester-long agreement

developed between a student and a faculty member to discuss ongoing work, a particular project, or a course of study.

This agreement, including frequency of meetings and unit value, will be drawn up on an Independent Study Contract.

The Independent Study contract is available beginning two weeks prior to the start of the Fall and Spring term. Independent Studies are not available in the Summer or Winter sessions.

Once submitted, your request will be reviewed and if approved, will be added to your schedule by the Registrar. The contract can be found by clicking "<https://calarts.formstack.com/forms/is>">Here

2

Description

Open to Art School BFA3 and BFA4.

This course may be open to students at other year levels, and in other Schools, by Permission of Instructor.

This course will bring students into an up-to-date conversation about "source materials" that influence and direct one another, while also undertaking an investigation into the nature of relationship itself. Students will become familiar with a variety of flows/forms/forces which may be pertinent to art process via false or veritable analogy. Arrive ready to read, think and participate with your peers. Critique will focus on student work and interest especially as it connects with a renewed attention to structure/relation-making. Consistent attendance is mandatory.

Each student presents twice during semester. MFA-oriented but not exclusive.

Credit Hours

Min Credit Hours:

2

Max Credit Hours:

3

Description

Each student will present their work to the class at least once during the semester. The student presenting work can determine some of the

parameters for her/his critique. S/he may either opt to introduce the work before the discussion begins or s/he may chose to remain quiet, letting the class explore the work's meaning without the artist's input.

The class will deeply investigate the meaning of each artwork within a generative and consensus building discourse. Students are encouraged to fully consider all aspects of the work in question, to take nothing for granted, and to find clear but non-hierarchical modes of expressing their discoveries. Sometimes this takes the form of a comparison between the student's intent and the actual meaning produced by the work, with the goal of helping each student close the gap between intent and result.

Description

Open to Art School BFA3 and BFA4.
This course may be open to students at other year levels, and in other Schools, by Permission of Instructor.

This course will consider the exhibition as a/the primary context for defining the objectives and parameters of contemporary art discourse. Among our concerns will be the shifting roles of artists and curators, sites of production (museum, exhibition catalogue or website), and sites of critical and historical reception. We will examine groundbreaking and controversial exhibitions, such as Anti-Illusion: Procedures/Materials, Live in Your Head: When Attitudes Become Form, Information, Bad Painting, Pictures, the 1993 Whitney Biennial of American Art, Utopia Station, and Documenta 11, alongside the work of influential curators, such as Nicolas Bourriaud, Okwui Enwezor, Thelma Golden, Lucy Lippard, Hans Ulrich Obrist, Harald Szeemann, and Marcia Tucker. The course will be driven by individual and group research projects, conversations with local or visiting curators, and lively class discussion.

Description

Open to Art School only.
This course may be open to students at other year levels, and in other Schools, by Permission of Instructor.

Students enrolling in this course must be in the Santa Clarita or greater Los Angeles area. During this course, we will explore the relationships between walking and drawing and painting. There can be a subtle balance between getting lost (in looking), and keeping your bearings in both your practice and on the trail. In this class, experimentation will be encouraged in order to gain familiarity with the physical properties of liquid media, dirt, and rocks. We will look closely at what constitutes these landscapes through readings on geology, natural patterns, and artists who implement critical wandering in their work (eg. Robert Smithson, Agnes Martin, Vija Celmins, and Michelangelo Antonioni). This technical and conceptual exploration will involve studio work, readings, image presentations, and, indeed, long walks in natural areas. "Quiddities never rest, they ramble. The meander is more attractive than a straight shot aimed at a bull's-eye. Rambling is a strategy that encourages waywardness, an encounter with the unforeseen and happenstance, a reaction to the immediate and local: dailiness and quiddities are integral to it." (Lynne Cooke, In the Shadow of Robert Walser; from A Little Ramble: In the Spirit of Robert Walser, edited by Christine Burgin/Donald Young).

Credit Hours

Min Credit Hours:
2

Description

"Tuff Luxe Crit" is a critique class for the serious artist who is ready for an extreme close-up. That is, this course offers a concrete/exploratory, personal/political, historical/philosophical analysis of each student's chosen body of work done while at CalArts. Positions will be taken, shaken, reassembled and repositioned. Each student will present her or his own work in class or studio, after a prep session with the instructor. The class will respond as a peer group determined to mine the intelligence of each artwork as presented. Proverbial blood, sweat, and tears are expected. Excellence in thought and discussion will be admired and encouraged. Dangerously subjective hyperboles will be taken to task. Hopefully each artist will finish the course with ample survival skills, ready to thrive in any competitive climate in or outside

of CalArts. Participation required; no spectators allowed. Mandatory professionalism and mutual respect emphasized.

"[The] body itself...is both biological and psychical. This understanding of the body as a hinge or threshold between nature and culture makes the limitations of a genetic, or purely anatomical or physiological, account of bodies explicit." - Elizabeth Grosz. This will be an idiosyncratic survey class in which we undertake close readings of articles both foundational and contemporary in critical/ artistic discourse on embodiment, bodies, and sensibility. One focus will be on the body as explored in recent affect theory (i.e., the ongoing-ness or "bloom" of a processual materialism); we will also touch upon issues of labor, incarceration, perception, image making and circulation, performance, surveillance, optimism, virtuality, "other-ized" bodies, and intersubjectivity. Readings may include work by Eve Sedgwick, Brian Massumi, Judith Butler, Fred Moten, Merleau-Ponty, Lauren Berlant, Ruth Wilson Gilmore, Michelle Alexander, Sylvan Tomkins, Hito Steyerl, Donna Haraway, and Beatriz Preciado. Throughout the semester we will relate these readings to art historical and contemporary art practices, as well as our own. Students may benefit from having taken my class "Beyond the Binary" but are not required to have done so.

Description
Lost River/ Missing Lake: The Politics of Water in Los Angeles. This class will explore specific ways to transform real-world research into multi-form artworks. The research at the core of the class will focus on the problems of water scarcity in Los Angeles and the Southwest, and will consider various histories, politics, technologies and plans. Los Angeles is built on dry chaparral, originally irrigated by a seasonal river. To grow it had to import water and in the early 20th Century the Los Angeles Aqueduct drained Owens Lake on the eastern side of the Sierra Nevada, turning it into a dust bowl. This aqueduct passes through Santa Clarita on its way to Los Angeles. It was soon evident that this system would not support the growing city, and in the 1930s a new aqueduct was built to bring water from the Colorado River at Parker Dam. This system fed the eastern part of the metropolis, and also allowed the development of the desert cities around Palm Spings and Coachella. In the 1960s the State developed an even more ambitious aqueduct system to bring water from the Sacramento Delta area to all of Southern California, and the Los Angeles branch terminates at Castaic Lake. The entire area is in a multi-year drought and there is growing concern about future sustainability. Can we find new sources of water, or ways to use less? Artists cannot solve problems of this magnitude, but by understanding them and considering them together, we may open a discussion that will then lead to solutions.

The class will be structured around a series of

lectures and presentations, as well as a number of field trips to various water significant sites in Santa Clarita and Los Angeles.

School(s) Program(s)
School of Art Art

Academic Level
UG - Undergraduate

Credit Hours

Min Credit Hours:
2

Description

This course is based on the theory and practice of composer, performer, and educator Pauline Oliveros (1932-2016). Her influential "Sonic Meditations" implicate both the physical body and the social body, are rooted in an intensive engagement with the sound environment, and emphasize modes of awareness and attention and the relationship between these two perceptual states. Her subsequent development of Deep Listening is "a practice intended for experiencing heightened and expanded awareness of the sound/silence continuum." This course is invested in exploring these ideas in relation to contemporary art, prioritizing sound over vision while also shifting focus from individual practice toward plural formations. Students will listen to music by Oliveros and perform some of her scores, many of which were intended for untrained performers. We will also read and discuss writings by Oliveros and many others, while considering adjacent works of theory, art, and performance. In this sense, Oliveros will act as a central node for an expansive inquiry into sound, listening, place, queer temporality, improvisation, gender, collectivity, and other interests. Students will maintain a notebook or sketchbook for writing and drawing, and each student will present a final project or develop and lead a group activity. Over the course of the semester, students are expected to develop a better sense of both local and global awareness of the sonic environment and beyond. This course is open for online enrollment to students in the Program in Art and open to students across the institute by permission of the instructor.

School(s)

School of Art

Academic Level

UG - Undergraduate

Credit Hours**Min Credit Hours:**

2

Description

The End After - Catastrophe in theory and poetics of cinema and video art Not simply a survey of cinematic cautionary apocalyptic parables: this is a seminar/crit on time and on the function of ending/continuity in our art and theory. The class is also a general study of more universal matters such as the eschatological ways we posit history (apocalypse/post-apocalypse) and the forms we impose on time. Frank Kermode asserts that time in its 'pure' state is disorganized, that our fictions are attempts to overcome this disorganization by imposing on it a structure which has both a beginning and an ending; our plots, whether they be literary or historical, are, we are led to believe, methods of humanizing time. Qualified students should have an interest in philosophy and fiction and are required to complete readings and a final studio-based project/experiment which addresses the class topic.

Credit Hours**Min Credit Hours:**

2

Description

We don't make art alone - even though we are or often feel, alone in our thoughts, studios, ideas, or visions. This group course considers how we might reconsider notions of mutuality, collaboration, and collegiality alongside our art making.

Experimenting with the critique seminar format and inspired by the book by author/lawyer/trans-activist/organizer, Dean Spade: "No Masters, No Flakes," we read with mutual aid group experience to think about and support the work we wish to make with and for others - including exploring themes of belonging in and out of the art-making community.

This class aims to explore ways to communicate and receive support in one's pursuit of artmaking by communicating with sensitivity and awareness of self and others' and allows for opportunities to deepen our own perspectives, perceptual abilities, awareness, and sensitivity through our work as contributing artists in the midst of a complex and fast-shifting world.

The Ephemeral and Letting Go

Subject Code

AART

Course Number

484

School(s)

School of Art

Academic Level

UG - Undergraduate

Credit Hours**Min Credit Hours:**

3

Description

Both a survey of fleeting work from contemporary art history as well as an exploration of ephemerality's expressive potential in our own studio practice. Performance, sound, social sculpture, impermanent materials and their afterimage will all be investigated. We will question the necessity of archival standards and embrace letting go as a means of preservation.

In this course students will realize several projects that will fall somewhere on the spectrum of sculpture, installation, performance and/or intervention. There will be readings, lectures, writing assignments and critique.

What does it mean to make work that doesn't last?

What is the role of the audience in work that is no longer there? How do we know if it even happened? If a tree falls in the forest and no one is there to witness it, can we find the potential in its decline to the duff?

Description

From the VISUAL AIDS website: "Visual AIDS utilizes art to fight AIDS by provoking dialogue, supporting HIV+ artists, and preserving a legacy, because AIDS is not over."

We will focus on art, artists and practices in the subject of archives, advocacy, and the AIDS crisis. Using research techniques including oral, digital, and written histories and archives, this class will center the work of the organization Visual AIDS and its rich (digital) archive, The Registry that features HIV+ artists (living and artists who have crossed over.) We will visit the Los Angeles ONE ARCHIVE (field trip) and explore other archives such as the SCHOMBURG CENTER that centers POC artists/activists' work. We will engage with the work and ethics of the collective, What Would An HIV Doula Do (WWHIVDD) as well as the rich written texts from the 1980's Other Countries collective.

The seminar will include weekly illustrated presentations, bi-weekly readings and written assignments, and at least two guest speakers-

including at least one artist who is in the registry and a visit from a queer archivist/writer/librarian. Students will delve into the Visual AIDS archive via past/present periods, histories/politics, explore form/metier/interest, and review and create guest-curated galleries.

Student discover(ies) will be based on their own metier(s) and experimentation as a way to explore the Visual AIDS archive (alongside other organizations/artists-activists as mentioned above). Projects include a mid-term project focused on citational practice and inter-generational oral history development and a final project further developed into an experimental curatorial project resulting in writing plus an artwork and/or a curated digital gallery.

Description

While Western thought has a long tradition of absolutes-isolating self from environment, active from passive, cause from effect, there have always been strands of thought that complicate, refuse, or upend this model, and focus instead on the intersubjectivity or interdependence of our minds, bodies and the world. Some of these strands are feminist; some anti-colonial; some psychoanalytic, some ecological; some phenomenological; some ethical; some biological; and so on. This advanced seminar consists of close-readings of (often) complicated texts which take up this concept as their focus. Along the way we will touch on issues of distributed agency, will, perception, technology, blame, imbrication, "the plural subject," diversity & specificity, infinity, sovereignty, incarceration, disability, care, and love. By talking together and thinking together students further their understanding of ideas in weekly readings so that these ideas might ignite fresh questions and experiments in the studio. Readings include work by Édouard Glissant, Judith Butler, Jane Bennett, Fred Moten, Karen Barad, Saidiya Hartman, and Maurice Merleau-Ponty.

Description
This hybrid practice and seminar course, Performing Problems, explores and theorizes performance (live, on-video, online) utilizing the provocation of a "problem". For this course, "problems" might include but are not restricted to the generosity of glitches, hitches, difficulties, refusals, and current events. We aim to use multiple creative study strategies such as: engage in performative/meditative activities; study performance constructions and intersections via Materiality, Body and Bodies, Provocations, Themes; research the work of artist/scholar provocateurs whose works engage, challenge, and value "problems" such as centering marginalized or under-recognized voices, bodies, topics, themes, poetics, politics, etc.; look at other forms of problems including logistics that challenge performance-makers such as engaging with various sites, institutions, or the various ways we imagine our work in relation to audience(s), collaborators, curators, writers, researchers. Ultimately, we identify and question our own forms of, and encounters with, "problems" and/or "performance". Interdisciplinary artists such as queer Diné artist Demian Dinéyazhi, Navild Acosta and Sosa, Kia Labeija, Vaginal Crème Davis, Johanna Hedva, Marlon Riggs, Lovett/Codagnone, Young Joon Kwak and many more. This course deepens our work with citation and performance practice(s) while working through difficulty and exploring boundaries. Readings include guiding texts by Lauren Berlant, Sam Delaney, Fred Moten/Stefano Harney, Amber Jamilla Musser, and the writing of artists highlighted in the course. As participants in PERFORMING PROBLEMS, we seek guidance and inspiration from past and present artists by deepening our experience with how artists engage, boundary-push, devise, and continue to change the field of art and performance. To support our performance study, we

will engage with the Six Thinking Hats method. Highly recommended for students with interest and experience in performance across the Institute.

Description
This is a studio course for students interested in research, writing, and editing. Centered on the ongoing work of EastofBorneo, the online magazine of contemporary art published by the Art School, the class will work in concert with the editorial team to develop and engage research projects. A feature of the magazine is the collaborative archive, in which we collect information and images documenting aspects of artmaking in the Los Angeles region. During the class students will research topics and discuss their relevancy, gather material, write and edit contextualizing texts. During the final weeks of the semester the class final projects will be presented in a charette format, for discussion and evaluation prior to publication. The course will thus offer a hands-on experience, framed by discussion of art research and writing in general, and the workings of EastofBorneo in particular. The course will begin with an analysis of needs, what information EastofBorneo lacks. We will then seek that information, online and in the various archives in Los Angeles, from the CalArts Library to the LA Public Library to the Getty Research Institute, from Los Angeles Contemporary Archive (LACA) to private records kept by artists and smaller institutions. Once identified, materials will be collected and scanned, short introductory texts written. Finally, the completed work will be presented to the EastofBorneo editorial team for discussion, approval and posting.

Academic Level

UG - Undergraduate

Credit Hours

Min Credit Hours:

2

Description

This course will explore topophilia, urban sprawl, regional architectural forms, artifice, pastiche and camp as situated in the city of Los Angeles. Through a series of onsite visits supplemented by readings and films we will gain a better understanding of how the city of Los Angeles was organized, its aesthetics, and what political forces and cultural forms influence its unique existence as "seventeen suburbs in search of a city." We will study Disneyland, the film industry, real estate redlining, the development of the "teenager" and its relationship to car culture, Los Angeles' immigrant culture, the natural landscape and its opposite, extreme artifice.

Students will be introduced to the themes of simulation, post-modern architectural theory, landscape theory, politics and law related to city organization, and economics related to identity formation. We will look to challenge assumptions about taste and deconstruct divisions between artifice and the real. Students will present research midterm as well as a final art project. Students will need to be responsible for their own transportation since the class will be meeting off campus several times during the term.

Description

In This Thing Together: Solidarity and Practice

What does it take to build togetherness in the current climate of such staggering inequality, polarization, ecological calamity and political violence? Can we navigate alone in our studios and expect to survive? Studio art production tends to emphasize individualism and personal expression. In this course we strive to recognize the potential of our inherent interconnectedness and use our collective power for making. In this class where we will engage readings together and make work together. Collaborative projects and conversations will lead us to an understanding of the crucial role of solidarity. Let's see what we can build together.

Description

Permission of Instructor only.

Independent Study is a semester-long agreement developed between a student and a faculty member to discuss ongoing work, a particular project, or a course of study.

This agreement, including frequency of meetings and unit value, will be drawn up on an Independent Study Contract.

The Independent Study contract is available beginning two weeks prior to the start of the Fall and Spring term. Independent Studies are not available in the Summer or Winter sessions.

Once submitted, your request will be reviewed and if approved, will be added to your schedule by the Registrar. The contract can be found by clicking "<https://calarts.formstack.com/forms/is>">Here

Description

Open to Art School only. This course may be open to students at other year levels, and in other Schools, by Permission of Instructor.

Open Critique is a venue for students to examine their work critically in the context of a peer dialogue guided by the instructor. In order for students to take advantage of the diversity of approaches offered by our regular and visiting faculty, this course is designed to be taught by various instructors in each semester and multiple sections may be offered in the same semester. Please refer to course descriptions by each section instructor which specify how the individual critique sessions will be structured.

This course will push the work of the serious artist with thorough, rigorous critique. The intention of each student will be the beginning point from which we, as a group, will investigate and interrogate the results of works both in-progress and newly completed. Contemporary discourse will revolve around the interplay of ideas and the materials from which they are realized. In a world where any material can be considered as a source for artistic production, this course will place special emphasis on why particular materials are chosen, their histories and inherent meanings, how they are manipulated, and their successes or failures in conveying the intention of the maker. Beyond intention, we will also leave room to examine and discuss the importance of how the "unexpected" or "accidental" plays into artistic production and the development of new ideas. Participation and attendance from everyone is mandatory. Two to three students will present their work each week.

Description

In this class we will explore the tension between the artwork itself and what surrounds it, such as the artist's persona, history, context, discourse, the internet and the circulation of the materials that contribute to its meaning. Each critique will be split into two parts as an experiment in meaning construction. Students will be asked to present an artwork to the rest of the class - the presenting artist will not be able to contribute at this point, while the rest of the class spend some time collectively unpacking and discussing what meanings the work elicits.

In the second part of the critique, the same artist will present a short artist talk which they would have worked on throughout the weeks in the class. The artist can present directly on the artwork they have shared, or more generally on their art practice. This can be performative, or a more traditional artist talk as long as the artist is sharing with the group where they are coming from when making work. It can be about one specific aspect of the work - such as the history of a material used - or a particular research dimension.

The class will then be able to engage further by asking questions or creating more discussions. This allows the artist in the class to find ways to bridge the gap between their intentions and the artwork itself, and also brings the artist's voice in relation to the work, allowing them to think creatively about ways to do this in their practice. The objective is to understand that discourse is as important as the artwork itself.

AART500H - Open Painting Critique

General

Course Long Title

Open Painting Critique

Subject Code	Course Number
AART	500H

School(s)
School of Art

Academic Level
GR - Graduate

Credit Hours

Min Credit Hours:

Description

This is a standard painting critique, open to virtually anyone with the painting practice. Although not a studio class, technique will be discussed when necessary; one on one meetings may take place regarding technique when called for or requested.

Two students will be critiqued per three hour session. Critique by peers will be encouraged.

"Painting" will be defined as marking the surface; therefore if a student has an extensive drawing practice, they will have a place.

Description

This class will be a laboratory of the quotidian. Everyday crumbs swept together hastily. Small irresolute gestures, form on the move. Every session; a reading, a screening, and some words that deal with dailiness, alienation, time, process, history, change, observation, and difference. We will help each other see what we make anew. You will bring one work (object, text, installation, performance, whatever) starting the second week, and bring that same work back every week "changed." Change for us is broad. It can be a material, observable change, or it can be a shift in your disposition toward your thing. We will observe and make meaning of those changes together.

Description

Sensing Crit: Do U Love What U Feel? is a critique course that provides an opportunity to share work for critical feedback up to three times over the course of the semester. This course offers multiple in-depth critique approaches, including somatic, practice-based, and research methodologies. We experiment with looking and sensing through material investigation while deepening our practices via communal reading, somatic awareness, reading and writing. Sensing Crit: Do U Love What U Feel? develops engagement via discursive relationships built upon artists' work and works-in-process while highlighting the artist-to-artist relationship. This supportive approach offers critical witnessing, empathetic feedback, and somatic engagement to deepen our practices of seeing and feeling through material, semiotic, physical and breathwork methodologies. Recommended for students experimenting across mediums (inter- & cross-disciplinary) *and* metier-specific students who seek to expand their approach while challenging themselves via collective imaginaries, which necessitate involving diverse paths, questions, and experimentation.

Description

This kinetic sculpture course is about making things that work and going deep into our problem solving minds. We will aim to demystify and employ analog electronics and mechanisms, study organic and engineered systems and energies, and explore the manifold ways to design and make things move in service to artistic vision. This studio-oriented class, with a strong physical

generate custom colors and characteristics. Students will learn (1) to identify glaze chemicals and their attributes, (2) the process of experimentally adapting glaze recipes to achieve the desired result, and (3) techniques for loading and firing electric kilns. Students will meet independently with the instructor throughout the course and will be expected to present their findings at the end of the semester. There is a \$50.00 course fee which will provide the raw chemicals, clay and supplies needed for the semester. Due to the nature of the chemicals involved in glaze chemistry, students will be required to provide their own personal protective equipment including disposable gloves and a particle respirator.

AART 511B

School(s)
School of Art

Academic Level
GR - Graduate

Credit Hours

Min Credit Hours:
3

Description
This class will explore the idea of multiple narratives being told at once, while all holding their own identity and equal ground, but yet becoming one. Students will contemplate how each narrative element relates to one another, both in harmony and disharmony. Plus, they will become proficient in paying special attention to the stories that arise from the space in between elements. And students will learn to be wary of narratives that dominate and invisibilize other narratives, along with how to subvert this domination. They will also acquire multifaceted and spherical storytelling skills in various mediums, including writing and 360° VR video making. In addition to learning how to craft these multifaceted narratives, they will be encouraged to grapple with and account for the agency of a viewer/reader who is no longer trapped by a limited gaze. Due to the limited amount of 360° VR cameras, this class will be strictly limited to 9 students.

General

Course Long Title
Clay, Light and Shadow

Subject Code Course Number
AART 511C

School(s)
School of Art

Academic Level
GR - Graduate

Credit Hours

Min Credit Hours:
2

Description
This course will cover the processes for constructing three dimensional sculptures and objects in clay while exploring the material and

metaphorical relationships between light and shadow. Through exercises in experimentation, we will work with intuition and chance to channel shadow energy as a generative creative process. Projects will explore archetype through Jungian and tarot imagery as well as combining clay and light through reflection, obfuscation and translucency to illuminate space and architecture. We will learn the processes for constructing three dimensional sculptures and objects in clay and undertake the fundamental methods for building including slab and coil and traditional finishing techniques such as firing and glazing.

Students will be encouraged to apply these techniques both in the construction of static objects as well as experimenting with incorporating the material into other areas of their practice. The class will culminate in a group exhibition and critique. 25lbs of clay will be provided to each person though students should be prepared to potentially purchase additional material if their proposed projects require it.

General

Course Long Title
Sound Affects - Sound Art

Subject Code	Course Number
AART	511E

School(s)
School of Art

Academic Level
GR - Graduate

Credit Hours

Min Credit Hours:
3

Description

This course will include a series of lectures, workshops, and assignments with emphasis on experimentation and pre-production strategies and techniques for capturing, creating, reproducing, and manipulating sound and audio materials in conventional and unconventional ways. We will study the physics of sound and acoustics. Readings will include texts on a variety of topics including the history of sound art, technical audio recording, psychoacoustics, physics, and affect theory.

The students will be introduced to analog recording and reproduction materials and techniques. We will experiment with and exploit the unique qualities and limitations of analog media before moving into a series of introductory digital recording workshops. Working within the limitations of this physical material will position us to engage in more nuanced analysis of techniques and critique of intention and content

when later working in the digital realm (of seemingly infinite possibility.) Additionally, we will be recreating selected analog media sound art works as part of our process of discovery and experimentation.

We will engage in a practice of tuning our aural faculties through both deep and reduced listening. If one breaks music and sound down into parts (intervals, timbre, rhythm, pitch, prosody, etc) does that negate the sound itself? How does that analysis affect our holistic experience? For the purpose of this class we will be breaking sound down into parts but remain always mindful to continue a discussion of how what we are hearing is inextricably situated in our environment.

In our study of acoustics students will also learn how to "tune a room": how to identify and work with the resonant characteristics of installation/performance spaces, consider how and where the work is presented and how that space acts as an active "participant" affecting the performance/presentation/perception of their work.

Description

"First forget inspiration. Habit is more dependable. Habit will sustain you whether you're inspired or not. Habit will help you finish and polish your stories. Inspiration won't. Habit is persistence in practice." Octavia Butler, Bloodchild and Other Stories

In BUILDING&BREAKING will focus on interdisciplinary, exploratory, conceptual, somatic, & material processes, for building and breaking into the notion of "having, building, making, exploring a daily practice."

BUILDING&BREAKING will explore techniques such as Somatics, Scores, Algorithms, Play, News Exorcisms, Internal-External Observation, and other creative approaches. Diving into practices that build habits and/or break from routines, we explore how we might develop them through spatial and sensory activities, repetition, meditation,

excess, communication games,. We will apply notions of rest, observation, and recuperation to our accompanying Reading, Writing, Moving, and shared Research - group and solo.

BUILDING&BREAKING aims to support students at all stages, in any medium/school through the commitment of opening to experimentation that unearths our relationship to new and old habits, reorienting how we imagine success and failure while engaging in the potencies of discovery and loss.

Making Bodies

Subject Code

AART

Course Number

511G

School(s)

School of Art

Academic Level

GR - Graduate

Credit Hours

Min Credit Hours:

2

Description

Making Bodies is a materially-driven sculpture studio course open to intermediate and upper-level undergraduate and graduate students that aims to generate alternative ways of viewing and understanding bodies. Students will manipulate materials to reimagine what bodies can be, what they can do, how they signify, and how they can resist and challenge common and reductive conceptions of essentialized bodies and identities. Students will use a variety of different processes-from casting, creating assemblages using found materials, and experimenting with developing your own techniques and gestures of material transformation. The course incorporates readings, presentations, and discussions on the critical role of sculpture in the societal construction of bodies in conjunction with race, gender, and other identities within systems of power and privilege. We will look at contemporary artistic practices that push the limits of sculptural traditions and hierarchies as a means of producing alternative ways of engaging with racism, sexism, transphobia, and other social justice issues while expanding the discourse of sculpture.

General

Course Long Title

Wood Sculpture

Subject Code

AART

Course Number

511J

School(s)

School of Art

Academic Level

GR - Graduate

Credit Hours

Min Credit Hours:

3

Description

Engaging both the pragmatic and the imaginative, this sculpture course explores a singular material that lends itself to a variety of methodologies, processes, and associations. Throughout human history wood has lent its strength to functionality and its beauty to ritual and we will make use of both practicality and aesthetics to meet our needs in this class. Students will realize several sculpture projects over the course of the semester that will be assessed in group critique. There will be

readings, writing assignments, technical instruction and lectures.

In this course students will gain experience with a range of tools, from the stationary power tools in the wood shop for expediency and precision to traditional hand tools for embodied experience. However, this course is not about technical mastery, it is about introduction to possibilities. Because we will be focusing on wood for the entire semester, students will have a great opportunity to explore and access a large number of conceptual and expressive possibilities.

Description

Reappropriating objects, from the insignificant to the monumental! This sculpture course connects the present to the past; examining various contemporary art practices as well as functional, craft based processes from around the world. Students will be encouraged to experiment with materials they may not have considered viable; incorporating objects from their immediate environment (natural and recycled man-made), strengthening their ability to see sculpture in the every day. This class is structured around assigned studio projects that closely consider form and content. Students are expected to engage in rigorous analysis and discussion, helping to push each individuals work to the next level. Learning the balance of viewer consideration, while honoring the artist's original vision; culminating final projects will emphasize storytelling and world building through sculptural installation.

General

Course Long Title

Music To Paint To

Subject Code

AART

Course Number

511N

School(s)

School of Art

Academic Level

GR - Graduate

Credit Hours

Min Credit Hours:

2

Description

Throughout this studio class, we'll attempt to deconstruct the relationship between listening to music and painting as practice. Visual artists have always been influenced by music. Some show the specific influences of music in their work, like Corita Kent or Dave Muller. Others, like Jack Whitten, credit music as a motivation for ideas, concepts, and feelings in their paintings.

In some ways, maintaining a painting studio practice is an isolated existence. Many hours are spent alone with one's work, thoughts, and decisions concerning fluid mediums. Music can be an accomplice in this endeavor; it can inspire movement, entice action, or simply support with a warm atmosphere. During this class, each student will be asked to work on paintings in the classroom, complete readings, and create a playlist or select an album for our weekly painting sessions. These weekly music selections will be accompanied by a brief presentation by the student/selector.

Description

After a long period of marginalization, the interest in using craft methodologies in contemporary art practices has surged in recent years. This course will provide students with an inclusive framework from which to consider the use of traditional craft processes in creating art that explores issues relevant to students today. Throughout the term, we will work hands-on with media such as ceramics, paper making/ paper sculpture, dyeing with natural materials, soft sculpture/ quilting.

This course will introduce students to traditional and contemporary craft practices through the process of making, looking, reading, writing. We will learn about historical precedents and concepts such as Mingei, "Sloppy Craft", Minimalism, etc via discussions, readings, and slide presentations. Students will work with various sculptural techniques including ceramic slab and coil building, natural dyes, quilting/ Soft sculpture, and papermaking. Critical thinking, creativity and experimentation are encouraged.

Description

Work, Unwork, Postwork and Labor in Capitalist Realities

When we speak of work, we speak of a broad social and material construct, crucial in shaping experiences of reality and contouring the production of subjectivity. This understanding is rooted in a critical tradition that begins with Marx's notion of estranged labor, and continues through recent feminist critiques of the concept of work ethics. These analyses place the experience of work at the epicenter of our existence, operating as an ideological mechanism that promises perpetuation and legitimization of the individual's life via routines of normative and moralized tasks. This seminar attempts to examine this notion of work and work ethics alongside artistic practices who understand cultural production to be enmeshed in a larger system of labor relations, and inherently connected to contemporary social and political movements. Our analysis will consider different working practices from a discursive and practical perspective through reading discussion, workshops and field trips to diverse materializations of 'workspaces'.

Description

Performance as an artistic (anti)disciplinary field is often historicized as emerging from a will towards immateriality, grappling with art's commodity status and situating its practice at the threshold between theatricality and objecthood with the body as its common denominator. This rather young classification of post-1945 object-rejecting practices allows us to put them in conversation with different historical incarnations of the culturally situated movement of bodies in space that precede this terminology.

In this seminar we will consider the different histories of the purposeful mobilization of gesture, thinking about the difference between performativity and performance, the role of the moving body in the process of identity formation, and the relationship of these practices with the notions of ritual and spectacle. Following the idea that reality is constantly being built by the fleeting citation of the past existing in every gesture--from minuscule actions like brushing our teeth to highly connoted ceremonies like a handshake or a burial--I want us to think, through readings and exercises, about the power and potential that exists in the re-doubling and recontextualization of specific movements into an artistic manifestation.

Looking together at diverse incarnations of performance and ritual we will analyze their relations to a historical and social context, their strategies, and we will devise our own sequences imbued with personal meaning and mythologies. This seminar involves readings on performance's and performative theory, collective watching of documentation and the realization of exercises conceived to foster different approaches to action and gesture in order to rethink our own rituals, their meaning and origins, their world-building power and their relation to the notion of spectacle and sight as a mode of perception.

Open Seminar is a series of seminars of special topics chosen by the instructor.

Description

Postcolonial Theory: History, Experience and Aesthetic Implications

Postcolonial theory (also referred to as anti-colonial theory) emerged as an activist and cultural production in reaction to the violent colonization processes carried out by European imperial powers such as the UK and France during the XIXth century. After decades of material, discursive and political oppression at the hands of Western countries that were economically exploiting different African and Asian regions, a series of thinkers start rendering their experiences as colonized subjects visible, analyzing the horrific effects on the colonized subject of this mode of repression. Rather than simply rejecting European culture, postcolonialism focuses on the complex modes of hybridism generated by the relationships between colonized countries and the imperial powers they found themselves tether to. Using as its point of departure the cultures and ideas of those liberated from or still resisting European domination, this body of theory sheds light on the effects and affects produced by this socioeconomic phenomenon, whose consequences are of crucial importance in today's geopolitical and global landscape. This reflects the dynamic role the cultures and ideas of the formerly colonized and the still racialized and otherwise socially dominated play in today's world. This class will begin by examining some of the major theorists in the field, including Aime Cesaire, Franz Fanon, Edward Said, Gayatri Chakravorty Spivak, Homi K. Bhaba, and others, while simultaneously looking at different art works and practices that deal with the consequences, circumstances and specificities of colonial ruling over the cultures it intervened. Other writers we will look into are Simon Gikandi, Edwidge Danticat, Edouard Glissant, Jamaica Kincaid, and Robin Coste Lewis.

Open Seminar is a series of seminars of special topics chosen by the instructor.

Description

Resistance comes in all forms...this course will delve into resistance in the form of art and introduce community based activism as a crucial point of origin for such a type of resistance. It will review a variety of historical and contemporary works of art as resistance in and outside of the fine arts world, and communally discuss the impact that each work has had on social justice movements and / or the larger world. Students will also study community activist frameworks that can inform such types of resistance work and why such frameworks are necessary. This learning process will be aided by Zapantera Negra: An Artistic Encounter Between Black Panthers and Zapatistas a book that documents an artistic encounter between Emory Douglas, the Minister of Culture of the Black Panther Party, and the southern Mexican indigenous revolutionary group EZLN aka Zapatistas to not only artistically collaborate but to also address the question of what is the role of revolutionary art in the times of distress? And will use the work of the American author, women's rights activist and black feminist, Adrienne Aaree Brown in Emergent Strategy: Shaping Change, Changing Worlds which lays out activist frameworks of community mindful and politically intentional strategies for a better world.

Description

This course will explore love as a source of guidance and nurture for the artist who makes. It will begin with the proposition that love is a philosophy with the capacity to transform stagnant and dire social and material realities, while also undertake an examination of how love has been co-opted by capitalism, disregarded as unnecessary by pop culture, made to be silly by academia, and socially reduced to a phenomena that can only happen within the couple form or nuclear family unit. Students will also become familiar with works of art and social movements that center/ed love or the qualities of love as a primary medium or theme for their making. And students will collectively contemplate and critically analyze love's potential and its ability to hold up against their own socio-political realities of making new things and a new world to accompany the things they make.

Description

"Tech Nightmares, Illusions of Control" is a hybrid seminar + practice course conceived as a critical survey on different positions that articulate rejection, skepticism and resistance to the current developments of information technology. Throughout the class we will engage with a wide range of materials, from classical historical examples like the Luddite movement during the Industrial Revolution, to more contemporary critical perspectives on the effects and implications that our present reliance on technological devices, screens, the internet and data management systems have for our forms of socializing, governmentality and participation, and therefore our sense of politics and the self. Departing from early analysis like Richard Barbrook and Andy Cameron's essay "The Californian Ideology," or James Brook and Iain A. Boal's compilation "Resisting the Virtual Life" we will

look at the often disregarded politics surrounding the beginnings of the 'world wide web', the types of dialog, community and participation generated by online communication as well as the effects on work, social relations, and intimacy of these technological prosthetics. The course readings will be complemented with exercises and performative prompts conceived to test and manifest the types relationships we establish with different devices and applications.

Credit Hours

Min Credit Hours:

3

Description

"Propaganda that stimulates thinking, in no matter what field, is useful to the cause of the oppressed. Such propaganda is very much needed. Under governments which serve to promote exploitation, thought is considered base." - Bertolt Brecht

This course will be divided into two parts. The first half of the semester we will look at propaganda through an expanded lens. We will ask when and why does propaganda arise, with what means and toward what end? We will not only read into, analyze, and critique that which is clearly identified as propaganda, but we will also look at artworks, essays, poems, and gestures as vehicles of manipulation.

We will look at propaganda as an ambivalent act, and as a possibility within our practices. The second half of the semester we will individually or in groups establish an urgent truth and materialize it. We will enter a process of iteration and critique, mutually aiding each other's projects. The class will end with a presentation of what was made, and it will be discussed with a newfound vocabulary around the formal possibilities of propaganda.

Description

Welcome to Migrant hood!

Speaking at a conference on identity in 1987, Stuart Hall said, "My own sense of identity has always depended on the fact of being a migrant.. [Now] I find myself centered at last. Now that in the postmodern age you all feel so dispersed. I've become centered: what I thought of as dispersed and fragmented comes paradoxically, to be the representative modern experience. Welcome to migrant hood!"

This seminar will primarily engage the works of Sylvia Wynter, Stuart Hall, Frantz Fanon, Edouard Glissant, and C.L.R. James. What about the geography and history of the Caribbean harbors such groundbreaking perspectives? All these thinkers have provided frameworks that speak to not only their specific conditions, but seem to hold truths worth articulating in our increasingly destabilized, dispersed, globalized present.

We will approach seminal texts by each of the above authors in relation to the specific social forces of their time. We will also pair the texts with corresponding influences and discourses: Gramsci with Hall, Marx with James, Foucault with Wynter and psychoanalysis with Fanon.

Also, through the work of Dionne Brand, Steve McQueen, Sung Tieu, many others we will think about how the above discourses can make their way into literature, film, installation and other forms.

Lastly, we will continually focus on the relationship between theory and praxis in the works and lives of these individuals and in our own lives.

Description

Friends Playing is a studio-seminar course in which we will look at friendship and play as two necessary components of a future yet to be imagined or narrativized. Wherever we look we see private property and individuals navigating the world alone with their things and their goals. We see folks prioritizing individualized notions of progress while abandoning friends and play. Through the act of playing and some light study around the historical and economic relations at play in play, we will create together ways of getting toward new freedoms. Bring your friends, make new ones, we are here prioritizing what may actually get us somewhere.

Description

This is a class about ghosts. In this course, we delve into the haunting legacies of forced removals and violent dispossession, exploring how their affectivity and materiality persist through time in archives and historical records that are filled with countless gaps and omissions. We will think through the potential implications of adopting Derrida's hauntology, Benjamin's angels of history, Hartman's critical fabulations, Barad's quantum physics and the entanglement of matter and meaning, as well as many others as a framework for critical heritage practices and counter-histories. By employing pedagogical concepts such as sensitivity to nonlinear time, indeterminacy, and discontinuity, we confront the quantum specters of multiple pasts, presents, and futures or what I propose to name "quantologies". This approach offers a nuanced understanding of justice, challenging the constraints imposed by modernity, historicity, and teleologies shaped by revolutionary Marxisms. Join us as we navigate the complex terrain of memory, trauma, and resistance in our exploration of ghosts and their enduring significance.

Description

Expanding and ideating within the cohort, FOREVER STUDENT: Art MFA2+ is a support system and a discussion forum to address expectations, practices, and goals. This elective course centers on frank dialogue, discovery, methods, experimentation, and shared best practices for both individual and community wellness in the final semester "and beyond" for the CalArts Art MFA2.

This course offers guidance for pacing in the final months toward the grad project while opening to the potency of future building. We will utilize open and critical approaches to "professionalization" while thinking with "and beyond" market-focused, opaque, and unrealistic art-market strategies. We will move with, reconsider, or shift processes, procedures, expectations, and/or outcomes. This course examines multi-faceted approaches to hot topics including, but not restricted to: "art world & world-world relations", expectations, relationship building, shared &/ or individual concerns/fears/needs, identifying and extending resources, sustainable skill-building practices, working as an artist assistant or gallery installer (or...), preparing for "big" decisions, and more.

Further, we will ask how to expand our notions of collaboration, collectivity, trade/barter systems, financial pools, start-ups or pop-ups, skill and tool shares, and vital correspondence practices. By studying myriad approaches to the studio and our creative lives, we experiment with writing, archival practices, and field outreach; discuss sustainable material practices, studio maintenance, alternative practices and/or materials; and more. We will describe and speculate on keywords such as success, emergence, competition, wellness, boredom, and failure. We will discuss change, pivots, breaks, audience, collectors and collecting, ideas surrounding maturation, and the rich space of intergenerational dialogue.

FOREVER STUDENT course will also dovetail as a support system for early concept-building and goal-setting for the Calarts All-Art School Post-Grad Show to assist, envision, and contribute to the shape of the large group exhibition culture. This is a chance to pregame the Art MFA cohort's early exploration and research: instigating curator research, and/or identifying goals, sites, outcomes, marketing, media, including alternatives and more (- or less.)

We will likely visit the REEF for support + resourcing. Includes other potential group-defined field trips & interactions with active artists in the field, i.e., local Los Angeles, national, or international artist practitioners: grad peers, alumni, friends.

Post-MFA life (real and imagined) will include traditional and non-traditional approaches, strategies, debates, dreaming, and wish lists.

Description

"There are at least two kinds of games. One could be called finite, the other infinite. A finite game is played for the purpose of winning, an infinite game for the purpose of continuing the play."

In this advanced seminar we'll use James Carse's notion of FINITE AND INFINITE GAMES to launch and frame a deep-dive into theories related to and branching off of the collision of indeterminacy, play and the notion of the Conceit. Subjects discussed may include: states of exception, pretending, temporary consensual agreements (rules) and frameworks, norms, radical free will, belief(s), thought experiments/mentation, art discourse (the idea and function of the Score, the Premise, the Experiment and the Exhibition), participation/assimilation (opacity), submission, game design (failure/success/learning), emotion as experience, the Real, conscious enculturation, vulnerability/gamification, fiction as game,

non-fiction as game, panpsychism, the Performative Utterance, logical fallacies, generative false analogies and life as play and possibility.

Additional readings may include selections from:

Chandra Prescod-Weinstein, Gregory Bateson, Buckminster Fuller, Édouard Glissant, David Bohm, Karen Barad, Ray Kurzweill, Rosalind Krauss, and Roger Caillois.

"A finite player is trained not only to anticipate every future possibility, but to control the future, to prevent it from altering the past. This is the finite player in the mode of seriousness with its dread of unpredictable consequence. Infinite players, on the other hand, continue their play in the expectation of being surprised. If surprise is no longer possible, all play ceases..Because infinite players prepare themselves to be surprised by the future, they play in complete openness. It is not an openness as in candor, but an as in vulnerability. It is not a matter of exposing one's unchanging identity, the true self that has always been, but a way of exposing one's ceaseless growth, the dynamic self that has yet to be.To be prepared against surprise is to be trained. To be prepared for surprise is to be educated."

Description

This class will be a collaboration across three art schools, CalArts, HDK Hamburg, and KABK The Hague, and will an attempt to create community through both digital and material means, framed through a reconsideration of Mail Art. Mail Art flourished in the 1960s and 70s, before budget airlines made it possible to visit other countries and continents cheaply and easily. It was an economic way for artists to make long distance connections and create artworks that were both ephemeral and immediate. After more than two years of social isolation, it is possible to travel again, but prices are rising, and not everybody feels safe. What if we were to reconsider the possibilities of the international postal system.

Description

This class will consider absence (also known as "negative space") as content and a composition tool for creating installations, sculptures, and conceptual art works. This class focuses on the presence of absence, and will consider the political and commodity value of absence. This class also aims to consider "absence" in relation to art production effected by newer social behavior that is evolving in the current global pandemic.

While many past and current artworks will be referenced in class discussions, together we will closely examine these artworks: Lee Lozano's "Drop out Piece" (1970); David Hammons "Blizzard Ball Sale" (1983) and "Day's End" (2019); Doris Salcedo's "Shibboleth" (2007) and "Fragmentos" (2018); as well as two Whitney Biennial 2022 artworks, Raven Chacon's installation "Silent Choir", and EJ Hill's pink page* (*This piece has no title or listing, only a pink page in the Biennial catalog). I will be instructing weekly exercises for composition based on my practice with installation, performance, sculpture and conceptual art. The writings on human strike by the conceptual art duo Claire Fontaine, and "Positive and Negative Peace" essay by Johan Galtung, will be central to reading for class discussions.

Over the course of the class, students will participate in 2 critiques of their artworks that reflect the themes of the class. One presentation must be of new work created specifically for this class. Student's projects will be encouraged to consider installations in sites off campus as well as in studio.

Description

Join me in inquiry and research of the following: What does a sculptural practice looks like when it is sustainable for our ecosystem, finance, and mental health? How do we reframe constraints and policing as possibilities and liberation? Operating on materials (with its extraction and production), fabrication, transport and real estate, sculpture is particularly positioned to examine various injustice inherently in the art infrastrucutre today. How do we disentangle obfuscating notions such as "art effectiveness" or "claiming moral high ground"? If the logistics associated with exhibition-making is unsustainable, shall we ask if exhibition is essential? And what lessons have we learnt from the pandemic about sculpture's incompatibility to screen mode? No answers or "solutions" will be offered, only discursive space for your praxis. Students' research presentations will be augmented by assigned readings and guest speakers.

Credit Hours**Min Credit Hours:**

2

Description

This seminar/practice course is a hands-on observation on how our art experiments, mediums and subjects are altered by the language of persecution. Can text be the starting point to

split, cut, and interfere our interdisciplinary practices? Through a micro-politic of text, bodies & surfaces, we will reflect on topics of escape, disappearance, and eruption; followed by weekly prompts to make artifacts, pamphlets, actions and performances that are out of view, half constructed, or in hiding. We will review video actions from Colectivo Acciones de Arte (CADA), Laura Aguilar's desert photographs, Xandra Ibarra's performance-sculptures, Park McArthur's film Day, Etel Adnan's paintings and poems, David Wojnarowicz's Memoir of Disintegration; and intersect them with political actions done by BLM, Act Up and The Young Lords in the US, Galería Cima and FPMR in Chile, South Lebanon's Liberation Army, Anti-Apartheid Resistance in South Africa, among many others. Writing in this case is a mark to acknowledge our presence within or outside borders of oppression. Each session will give us the opportunity to reinterpret history using our own artistic languages and mediums. Collectively, we will move from the studio to the streets, and from public space back to the studio. Materials used in this class are: a phone camera, hardened paint, choreography, synthesizers, trash, singing voices, and the unframed canvas damaged during installation. Recommended for students with interdisciplinary interest across the Institute.

Description
This course is a studio-seminar course for advanced undergraduate and graduate students that focuses on intersections of performance art and sculpture, centering relationships between deviant materiality, bodies, and the performance of objecthood. Students will work on creating, reading about, discussing, and critiquing artwork that explores the deviant, queer, and fugitive capacities of materials, and expands ideas around embodiment. We will examine the artwork of primarily queer/trans/femme/disabled/BIPOC artists from the 20th century to the present who countered the harmful effects of the systemic objectification and violence against their bodies by reimagining and re-performing objecthood as a way toward agency. Students will reconsider common

modes of figuration to question commonly held beliefs of which bodies are natural or unnatural, and experiment with tactics of abstraction for the hidden, uncomfortable, unresolved matter that refuses to cohere into representative bodies that are subject to systemic control and surveillance. In addition to studio-based projects, students will work on critical-theoretical reading and writing assignments, presentations, and actively engage and collaborate with peers through in-class discussions, peer critique, research, and other assignments related to course themes. We will read and discuss issues within critical race theory, queer theory, concepts of abjection, performativity, drag, virtual bodies, and other ideas and artistic provocations that may inform a reimagined conception of human bodies, nonhuman objects, and things.

Description
Through engaging in various creative forms, including drawing, photography, performance, video production, and sonic exploration, students will critically analyze and reimagine the ancient past, challenge cultural norms, and cultivate a sense of community through collective experiences. This course explores the rich cultural heritage of the ancient Americas, focusing on civilizations such as the Inca Empire, Aztec society, indigenous communities from North America and from the Amazon Rainforest. Students will explore how these cultures utilized art as a means to communicate with the divine, document their histories, and stimulate connections within their communities. By actively participating in activities such as observing celestial patterns, making videos that capture concepts like "oneiric heritage," and exploring the sonic realm through recording and audio playback, students will cultivate approaches to their own artistic expression. Additionally, they will develop a critical mindset to analyze cultural norms and acquire the capacity to individual and community awareness through their own artistic endeavors.

Min Credit Hours:

2

Description

Open to Art School only.

This course may be open to students at other year levels, and in other Schools, by Permission of Instructor.

This course will bring students into an up-to-date conversation about "source materials" that influence and direct one another, while also undertaking an investigation into the nature of relationship itself. Students will become familiar with a variety of flows/forms/forces which may be pertinent to art process via false or veritable analogy. Arrive ready to read, think and participate with your peers.

Critique will focus on student work and interest especially as it connects with a renewed attention to structure/relation-making. Consistent attendance is mandatory. Each student presents twice during semester. MFA-oriented but not exclusive.

Description

Each student will present their work to the class at least once during the semester. The student presenting work can determine some of the parameters for her/his critique. S/he may either opt to introduce the work before the discussion begins or s/he may chose to remain quiet, letting the class explore the work's meaning without the artist's input. The class will deeply investigate the meaning of each artwork within a generative and consensus building discourse.

Students are encouraged to fully consider all aspects of the work in question, to take nothing for granted, and to find clear but non-hierarchical modes of expressing their discoveries. Sometimes this takes the form of a comparison between the student's intent and the actual meaning produced by the work, with the goal of helping each student close the gap between intent and result.

Description

What is the power of art? What is art for, who is it for, what does it do, is it for one or many? These are some of the question to which this seminar will be addressed. It

will be a search for possibilities and their contestations in relation to important issues in societies today. For our purposes art can be thought of broadly, a field that includes performing arts, time based media and literature in addition to visual and spatial art. We will inform our discussions with writings by artists, poets, designers and academics who elaborate differing theories of art's social and political dimensions.

Description

This course will examine historical and contemporary use of montage effects in still photography, film, video, painting, collage, assemblage, performance, and installation art. Slide lectures, videos, and films will be reviewed, as well assigned readings. Hands on demonstrations will generate experimentation and innovation. Student artwork will be critiqued in class and studio, responding to ongoing discussions. This is an intensive theory/practice course that will explore the artistic and social implications of montage technique.

Open to Art Program only. May be open to students at other year levels, and in other Schools, by Permission of Instructor.

Description

Open to Art School only.
This course will consider the exhibition as a the primary context for defining the objectives and parameters of contemporary art discourse. Among our concerns will be the shifting roles of artists and curators, sites of production (museum, exhibition catalogue or website), and sites of critical and historical reception. We will examine groundbreaking and controversial exhibitions, such as Anti-Illusion: Procedures/Materials, Live in Your Head: When Attitudes Become Form, Information, Bad Painting, Pictures, the 1993 Whitney Biennial of American Art, Utopia Station, and Documenta 11, alongside the work of influential curators, such as Nicolas Bourriaud, Okwui Enwezor, Thelma Golden, Lucy Lippard, Hans Ulrich Obrist, Harald Szeemann, and Marcia Tucker. The course will be driven by individual and group research projects, conversations with local or visiting curators, and lively class discussion.

Description

Open to Art School only.
This course may be open to students at other year levels, and in other Schools, by Permission of Instructor.

Students enrolling in this course must be in the Santa Clarita or greater Los Angeles area. During this course, we will explore the relationships between walking and drawing and painting. There can be a subtle balance between getting lost (in looking), and keeping your bearings in both your practice and on the trail. In this class, experimentation will be encouraged in order to gain familiarity with the physical properties of liquid media, dirt, and rocks. We will look closely at what constitutes these landscapes through readings on geology, natural patterns, and

artists who implement critical wandering in their work (eg. Robert Smithson, Agnes Martin, Vija Celmins, and Michelangelo Antonioni). This technical and conceptual exploration will involve studio work, readings, image presentations, and, indeed, long walks in natural areas. "Quiddities never rest, they ramble. The meander is more attractive than a straight shot aimed at a bull's-eye. Rambling is a strategy that encourages waywardness, an encounter with the unforeseen and happenstance, a reaction to the immediate and local: dailiness and quiddities are integral to it." (Lynne Cooke, In the Shadow of Robert Walser; from A Little Ramble: In the Spirit of Robert Walser, edited by Christine Burgin/Donald Young).

Description

"Tuff Luxe Crit" is a critique class for the serious artist who is ready for an extreme close-up. That is, this course offers a concrete/exploratory, personal/political, historical/philosophical analysis of each student's chosen body of work done while at CalArts. Positions will be taken, shaken, reassembled and repositioned. Each student will present her or his own work in class or studio, after a prep session with the instructor. The class will respond as a peer group determined to mine the intelligence of each artwork as presented. Proverbial blood, sweat, and tears are expected. Excellence in thought and discussion will be admired and encouraged. Dangerously subjective hyperboles will be taken to task. Hopefully each artist will finish the course with ample survival skills, ready to thrive in any competitive climate in or outside of CalArts. Participation required; no spectators allowed. Mandatory professionalism and mutual respect emphasized.

"[The] body itself...is both biological and psychical. This understanding of the body as a hinge or threshold between nature and culture makes the limitations of a genetic, or purely, anatomical or physiological, account of bodies explicit."- Elizabeth Grosz. This will be an idiosyncratic survey class in which we undertake close readings of articles both foundational and contemporary in critical/ artistic discourse on embodiment, bodies, and sensibility. One focus will be on the body as explored in recent affect theory (i.e., the ongoing-ness or "bloom" of a processual materialism); we will also touch upon issues of labor, incarceration, perception, image making and circulation, performance, surveillance, optimism, virtuality, "other-ized" bodies, and intersubjectivity. Readings may include work by Eve Sedgwick, Brian Massumi, Judith Butler, Fred Moten, Merleau-Ponty, Lauren Berlant, Ruth Wilson Gilmore, Michelle Alexander, Sylvan Tomkins, Hito Steyerl, Donna Haraway, and Beatriz Preciado. Throughout the semester we will relate these readings to art historical and contemporary art practices, as well as our own. Students may benefit from having taken my class "Beyond the Binary" but are not required to have done so. practices, as well as our own. Students may benefit from having taken my class "Beyond the Binary" but are not required to have done so.

Description

Lost River/ Missing Lake: The Politics of Water in Los Angeles. This class will explore specific ways to transform real-world research into multi-form artworks. The research at the core of the class will focus on the problems of water scarcity in Los Angeles and the Southwest, and will consider various histories, politics, technologies and plans. Los Angeles is built on dry chaparral, originally irrigated by a seasonal river. To grow it had to import water and in the early 20th Century the Los Angeles Aqueduct drained Owens Lake on the eastern side of the Sierra Nevada, turning it into a dust bowl. This aqueduct passes through Santa Clarita on its way to Los Angeles. It was soon evident that this system would not support the growing city, and in the 1930s a new aqueduct was built to bring water from the Colorado River at Parker Dam. This system fed the eastern part of the metropolis, and also allowed the development of the desert cities around Palm Spings and Coachella. In the 1960s the State developed an even more ambitious aqueduct system to bring water from the Sacramento Delta area to all of Southern California, and the Los Angeles branch terminates at Castaic Lake. The entire area is in a multi-year drought and there is growing concern about future sustainability. Can we find new sources of water, or ways to use less? Artists cannot solve problems of this magnitude, but by understanding them and considering them together,

we may open a discussion that will then lead to solutions.

The class will be structured around a series of lectures and presentations, as well as a number of field trips to various water significant sites in Santa Clarita and Los Angeles.

School(s)	Program(s)
School of Art	Art

Academic Level
GR - Graduate

Credit Hours

Min Credit Hours:
2

Description

This course is based on the theory and practice of composer, performer, and educator Pauline Oliveros (1932-2016). Her influential "Sonic Meditations" implicate both the physical body and the social body, are rooted in an intensive engagement with the sound environment, and emphasize modes of awareness and attention and the relationship between these two perceptual states. Her subsequent development of Deep Listening is "a practice intended for experiencing heightened and expanded awareness of the sound/silence continuum." This course is invested in exploring these ideas in relation to contemporary art, prioritizing sound over vision while also shifting focus from individual practice toward plural formations. Students will listen to music by Oliveros and perform some of her scores, many of which were intended for untrained performers. We will also read and discuss writings by Oliveros and many others, while considering adjacent works of theory, art, and performance. In this sense, Oliveros will act as a central node for an expansive inquiry into sound, listening, place, queer temporality, improvisation, gender, collectivity, and other interests. Students will maintain a notebook or sketchbook for writing and drawing, and each student will present a final project or develop and lead a group activity. Over the course of the semester, students are expected to develop a better sense of both local and global awareness of the sonic environment and beyond. This course is open for online enrollment to students in the Program in Art and open to students across the institute by permission of the instructor.

AART	682

School(s)
School of Art

Academic Level
GR - Graduate

Credit Hours

Min Credit Hours:
2

Description

The End After - Catastrophe in theory and poetics of cinema and video art Not simply a survey of cinematic cautionary apocalyptic parables: this is a seminar/crit on time and on the function of ending/continuity in our art and theory. The class is also a general study of more universal matters such as the eschatological ways we posit history (apocalypse/post-apocalypse) and the forms we impose on time. Frank Kermode asserts that time in its 'pure' state is disorganized, that our fictions are attempts to overcome this disorganization by imposing on it a structure which has both a beginning and an ending; our plots, whether they be literary or historical, are, we are led to believe, methods of humanizing time. Qualified students should have an interest in philosophy and fiction and are required to

complete readings and a final studio-based project/experiment which addresses the class topic.

Description

We don't make art alone - even though we are or often feel, alone in our thoughts, studios, ideas, or visions. This group course considers how we might reconsider notions of mutuality, collaboration, and collegiality alongside our art making.

Experimenting with the critique seminar format and inspired by the book by author/lawyer/trans-activist/organizer, Dean Spade: "No Masters, No Flakes," we read with mutual aid group experience to think about and support the work we wish to make with and for others - including exploring themes of belonging in and out of the art-making community.

This class aims to explore ways to communicate and receive support in one's pursuit of artmaking by communicating with sensitivity and awareness of self and others' and allows for opportunities to deepen our own perspectives, perceptual abilities, awareness, and sensitivity through our work as contributing artists in the midst of a complex and fast-shifting world.

Credit Hours

Min Credit Hours:

3

Description

Both a survey of fleeting work from contemporary art history as well as an exploration of ephemerality's expressive potential in our own studio practice. Performance, sound, social sculpture, impermanent materials and their afterimage will all be investigated. We will question the necessity of archival standards and embrace letting go as a means of preservation. In this course students will realize several projects that will fall somewhere on the spectrum of sculpture, installation, performance and/or intervention. There will be readings, lectures, writing assignments and critique. What does it mean to make work that doesn't last? What is the role of the audience in work that is no longer there? How do we know if it even happened? If a tree falls in the forest and no one is there to witness it. can we find the potential in its decline to the duff?

Description

From the VISUAL AIDS website: "Visual AIDS utilizes art to fight AIDS by provoking dialogue, supporting HIV+ artists, and preserving a legacy, because AIDS is not over."

We will focus on art, artists and practices in the subject of archives, advocacy, and the AIDS crisis. Using research techniques including oral, digital, and written histories and archives, this class will center the work of the organization Visual AIDS and its rich (digital) archive, The Registry that features HIV+ artists (living and artists who have crossed over.) We will visit the Los Angeles ONE ARCHIVE (field trip) and explore other archives such as the SCHOMBURG CENTER that centers POC artists/activists' work. We will engage with the work and ethics of the collective, What Would An HIV Doula Do (WWHIVDD) as well as the rich written texts from the 1980's Other

Countries collective.

The seminar will include weekly illustrated presentations, bi-weekly readings and written assignments, and at least two guest speakers- including at least one artist who is in the registry and a visit from a queer archivist/writer/librarian. Students will delve into the Visual AIDS archive via past/present periods, histories/politics, explore form/metier/interest, and review and create guest-curated galleries.

Student discover(ies) will be based on their own metier(s) and experimentation as a way to explore the Visual AIDS archive (alongside other organizations/artists-activists as mentioned above). Projects include a mid-term project focused on citational practice and inter-generational oral history development and a final project further developed into an experimental curatorial project resulting in writing plus an artwork and/or a curated digital gallery.

Description
While Western thought has a long tradition of absolutes-isolating self from environment, active from passive, cause from effect, there have always been strands of thought that complicate, refuse, or upend this model, and focus instead on the intersubjectivity or interdependence of our minds, bodies and the world. Some of these strands are feminist; some anti-colonial; some psychoanalytic, some ecological; some phenomenological; some ethical; some biological; and so on. This advanced seminar consists of close-readings of (often) complicated texts which take up this concept as their focus. Along the way we will touch on issues of distributed agency, will, perception, technology, blame, imbrication, "the plural subject," diversity & specificity, infinity, sovereignty, incarceration, disability, care, and love. By talking together and thinking together students further their understanding of ideas in weekly readings so that these ideas might ignite

fresh questions and experiments in the studio. Readings include work by Édouard Glissant, Judith Butler, Jane Bennett, Fred Moten, Karen Barad, Saidiya Hartman, and Maurice Merleau-Ponty.

Credit Hours

Min Credit Hours:
2

Description
This hybrid practice and seminar course, Performing Problems, explores and theorizes performance (live, on-video, online) utilizing the provocation of a "problem". For this course, "problems" might include but are not restricted to the generosity of glitches, hitches, difficulties, refusals, and current events. We aim to use multiple creative study strategies such as: engage in performative/meditative activities; study performance constructions and intersections via Materiality, Body and Bodies, Provocations, Themes; research the work of artist/scholar provocateurs whose works engage, challenge, and value "problems" such as centering marginalized or under-recognized voices, bodies, topics, themes, poetics, politics, etc.; look at other forms of problems including logistics that challenge performance-makers such as engaging with various sites, institutions, or the various ways we imagine our work in relation to audience(s), collaborators, curators, writers, researchers. Ultimately, we identify and question our own forms of, and encounters with, "problems" and/or "performance". Interdisciplinary artists such as queer Diné artist Demian Dinéyazhi, Navild Acosta and Sosa, Kia Labeija, Vaginal Crème Davis, Johanna Hedva, Marlon Riggs, Lovett/Codagnone, Young Joon Kwak and many more. This course deepens our work with citation and performance practice(s) while working through difficulty and exploring boundaries. Readings include guiding texts by Lauren Berlant, Sam Delaney, Fred Moten/Stefano Harney, Amber Jamilla Musser, and the writing of artists highlighted in the course. As participants in PERFORMING PROBLEMS, we seek guidance and inspiration from past and present artists by deepening our experience with how artists engage, boundary-push, devise, and continue to change the field of art and performance. To support our performance study, we

will engage with the Six Thinking Hats method.
Highly recommended for students with interest and experience in performance across the Institute.

Description
This is a studio course for students interested in research, writing, and editing. Centered on the ongoing work of EastofBorneo, the online magazine of contemporary art published by the Art School, the class will work in concert with the editorial team to develop and engage research projects. A feature of the magazine is the collaborative archive, in which we collect information and images documenting aspects of artmaking in the Los Angeles region. During the class students will research topics and discuss their relevancy, gather material, write and edit contextualizing texts. During the final weeks of the semester the class final projects will be presented in a charette format, for discussion and evaluation prior to publication. The course will thus offer a hands-on experience, framed by discussion of art research and writing in general, and the workings of EastofBorneo in particular. The course will begin with an analysis of needs, what information EastofBorneo lacks. We will then seek that information, online and in the various archives in Los Angeles, from the CalArts Library to the LA Public Library to the Getty Research Institute, from Los Angeles Contemporary Archive (LACA) to private records kept by artists and smaller institutions. Once identified, materials will be collected and scanned, short introductory texts written. Finally, the completed work will be presented to the EastofBorneo editorial team for discussion, approval and posting.

Description
The MFA 2 seminar series is a 4 unit course facilitated by Art Program faculty and specifically created for graduating MFA students. Continuing with the work developed during the first MFA year this seminar is conceived as an opportunity to delve into different contemporary issues and their aesthetic implications. Through different readings, screenings and presentations students are expected to strengthen their analytical capacities, fostering a rigorous engagement between social problematics and the way they materialize in the student's art practices. Objectives of the series are to promote dialog between the cohort in order to create a shared vocabulary, engage in different types of conversation with different art practices, familiarize students with a diversity of theoretical, political and artistic traditions, and assist them in recognizing genealogical relationships in their practices that can be explored and built upon.

Description

What are the intersections of art and politics?

This question is difficult for many reasons, least of all that both terms are used interchangeably to talk about multiple facets of human organization- socially and spatially. These are some of the aspects to which this seminar will be addressed. In addition, this course, taught by this semester by Kandis Williams, will focus on the popular use and conflation of common internet metaphors and their register and significance to aesthetic and political representation. Students will look at their personal ways of being, and their ways of being in relation to important issues in society today as they as expressed and formatted for digital exchange and as currency in and out of social-web based interactions. For our purposes art can be thought of broadly, a field that includes performing arts, time based media and literature in addition to visual and spatial art. Politics being more and less complexly defined through the terms application to many forms of authority and governance.

The course will be split into three- four part sections of topics that serve as intersections between the aesthetic and political. In the first section WEBS: SITES, NETWORKS, SUPERHIGHWAYS and CLOUDS students will look at metaphors for collectivity and collective movement. Followed by TRANSMISSIONS: SURFING, SIGNALS, ECHOS, AND REVERBERATIONS where students will look at metaphors around access, speed, distribution of wealth and visibility. And the final section; DATA: FOLLOWERS, SUBSCRIBERS, DOWNLOADS, PROFILES in which students will examine metaphors around identity, agency, and pathology and representation.

2

Description

This course will explore topophilia, urban sprawl, regional architectural forms, artifice, pastiche and camp as situated in the city of Los Angeles. Through a series of onsite visits supplemented by readings and films we will gain a better understanding of how the city of Los Angeles was organized, its aesthetics, and what political forces and cultural forms influence its unique existence as "seventeen suburbs in search of a city." We will study Disneyland, the film industry, real estate redlining, the development of the "teenager" and its relationship to car culture, Los Angeles' immigrant culture, the natural landscape and its opposite, extreme artifice.

Students will be introduced to the themes of simulation, post-modern architectural theory, landscape theory, politics and law related to city organization, and economics related to identity formation. We will look to challenge assumptions about taste and deconstruct divisions between artifice and the real. Students will present research midterm as well as a final art project.

Description

In This Thing Together: Solidarity and Practice

What does it take to build togetherness in the current climate of such staggering inequality, polarization, ecological calamity and political violence? Can we navigate alone in our studios and expect to survive? Studio art production tends to emphasize individualism and personal expression. In this course we strive to recognize the potential of our inherent interconnectedness and use our collective power for making. In this class where we will engage readings together and make work together. Collaborative projects and conversations will lead us to an understanding of the crucial role of solidarity. Let's see what we can build together.

Description

Permission of Instructor only.

Independent Study is a semester-long agreement developed between a student and a faculty member to discuss ongoing work, a particular project, or a course of study.

This agreement, including frequency of meetings and unit value, will be drawn up on an Independent Study Contract.

The Independent Study contract is available beginning two weeks prior to the start of the Fall and Spring term. Independent Studies are not available in the Summer or Winter sessions.

Once submitted, your request will be reviewed and if approved, will be added to your schedule by the Registrar. The contract can be found by clicking "<https://calarts.formstack.com/forms/is>">Here

Description

So, you've taken the Super Shop's Orientation.now what? Looking to fill the vacuum with some tangible building skills? This 6-week technical workshop class might be for you! We will be using Enzo Mari's wooden furniture design classic textbook: 'Autoprogettazione?' as our survival guide. This class will be centered around carpentry basics, utilizing Mari's furniture schematics to build simple, strong, and functional forms. The takeaway will be newfound confidence in the Super Shop's Wood Shop, a piece of furniture for your studio, and foundational fabrication skills using up-cycled lumber. Expect to purchase

Mari’s textbook, to work hard, to possibly get some wood splinters, and to turn scrap lumber into gold.

Credit Hours**Min Credit Hours:**

2

Description

Drawing is a kind of language, a method of thought and expression. It consists of a mark or line, typically against a blank page, but perhaps on a screen or in the larger world. Artists use drawing to work out an idea, or to analyze a problem. They use it as an activity to open up the imagination, or as an activity to explore the limits of a material. They use it to prepare an artwork, or consider it an artwork in its own right. This class will explore all these possibilities, perhaps more. We will practice some basic skills, and explore a variety of more advanced approaches. This is a studio class, so students will be expected to make drawings. To facilitate that, we will meet for 6 hours, every other week. During class time we will consider the drawings of some contemporary artists and work through various exercises and assignments. Students will also be developing a portfolio of drawings to share at the end of the semester, in class or in one of the Art School galleries. There will be a fee to cover materials.

Description
The Studio Series is comprised of discipline-specific studio based courses that provide BFA students the opportunity to learn both technically and conceptually through hands on experience. At present, Drawing, Painting, Sculpture, Print Lab, Time-Based Studio, The Art of Practicing Socially and Critical Ceramics are part of this series. Each session is taught by different faculty. Multiple sessions are offered in each semester. Different faculty may teach the same discipline-specific session to ensure exposure for various approaches. BFA Students are required to take at least 8 units of the Studio Series over the course of their attaining their BFA degree. Please refer to course descriptions provided by each individual instructor for more details.

Using the framework of a studio-based course, Social Practice provides BFA students the opportunity to study technical and conceptual processes through hands on experience. Different instructors may approach the method and concept of Social Practice differently. Multiple sessions may be offered in each semester. Please refer to course descriptions provided by each individual instructor for more details. BFA Students are required to take at least 8 units of studio-based courses to fulfill their BFA degree requirement.

This seminar will focus on the exploration of contemporary art practices both inside and outside of institutional formats, that

(pro)actively engage their socio-political-critical contexts. The class will be a forum for dialog on politics, ethics, social responsibility, activism, community engagement, and collaborative interdisciplinary models as they concern the "making" of art. We will explore ways of creating/finding/engaging/defining a context for your art practice. All of the above will be guided and inspired by the work of an eclectic group of manifesto pushers, border crossers, enlightened artists of every kind, curators, trouble-makers and practices that defy traditional definitions. The focus will be on finding inspiration for self-empowerment as we engage the world as professional artists. Open to all students, but geared toward undergraduates.

Description
What does it mean to have the basic necessities of
life? Are food, water, and shelter enough? Do we
not need human interaction, culture, and art? We
will engage basic survival strategies, from
gleaning to codeswitching, to address questions of
environmental need and sustenance, identity and
belonging. Sculpture projects will involve making
devices for foraging food, building shelter, and
constructing community. Artwork will be born of
necessity but driven by aesthetics, using our
hands to shape the world we inhabit. We will

employ sculptural methods developed throughout
human history to confront tensions between
individual desires and collective societal needs.
Our goal is to illuminate our choices and how they
impact survival.

Description
Feminist Quilting Bee is a sewing/pattern-making studio class that explores how artists create new artworks while gossiping, warning, and informing one another as a form of care. Deeply informed by feminist essays such as Kwame Holme's "What's The Tea: Gossip and the Production of Black Gay Social History", and Alessandro Portelli's "What Makes Oral History Different," and Katrin "Horn's Of Gaps and Gossip: Intimacy in the Archive," this course will use a variety of current discussion of feminist social topics as case studies to be workshoped and explored during sewing class.

In this course we will learn the fundamentals of your sewing machine: repair and cleaning alongside demonstrations in pattern making, riveting, applying batting, stitch, correcting, banner design, sail making, and building with industrial sculptural fabrics. We will explore a variety of contemporary and historical approaches to archiving textiles, which includes how we describe, catalogue, appraise, and restore quilts.

Description
This introductory Sculpture class is designed to introduce you to the world of object making. To make sculpture is to learn the craft of orchestrating relationships of material and process with form and presentation. It is to learn how a physical thing - an object - might suggest a feeling, embody an idea or elicit an intuition. As an introductory sculpture course, you will explore the basics of sculpture - scale, form, volume, gravity, structure, extension etc. We cover both additive and reductive processes and there will be an emphasis on the development of form and structure particular to each process. The other experience found within the course is more private and internal and concerns you becoming more cognizant of the way you think, more perceptive about the way you see. You will enhance your corporeal awareness in relation to material. These are for you to discover and are foundational to defining your voice.

A course exploring the role of the body in art via a guided practice in performance and performative video. The course will offer a number of different things at once, including exposure to recent and contemporary performance and performative video; opportunities to learn and employ performance strategies; familiarity with formal concepts in performativity, including costuming, pacing, duration, movement, humor, and editing; experiments and strategies for generating and performing text; and meditation on the possible roles and deployments of the body and materiality in our time. Such questions have been made all the more urgent by a cultural and artistic environment increasingly tied to and formed by the internet and the digital, 'virtual' world. Related concepts will include abjection, transgression, solidarity, queering, broader theories of flesh (phenomenological, holographic, fantasy), dissensus, conjunction, and physical limitations as a source of artistic inspiration and political resistance. Readings may include work by Rosi Braidotti, Henri Bergson, Franco 'Bifo' Berardi, Gloria Anzaldúa, and others.

Description

Open to BFA1 and BFA2 Art Program students only. Open to BFA3 and BFA4 Art Program students by Permission of Instructor.

Digital Skills for Artists provides hands-on, conceptual projects to integrate Mac and Adobe software skills with individual studio practice and critical thinking. Working on project driven assignments involving topic research and development of themes, students create wide-format posters and a French-fold perfect bound artist's book or zine. This course is for first or second year students in the institute with little or limited Mac and software experience. This course may be repeated for credit and counts toward a student's elective requirement for the Digital Arts Minor.

Description

This practicum workshop is restricted to Art School BFA students. This workshop examines the practice of designing memorable experiences using environments, video content, audio, light and technology. Participants will review a brief history of the practice and current examples within the field as an introduction to conceptual and aesthetic possibilities. The course will examine the processes involved in creating immersive storytelling/emotive environments, including research, concept & storyboarding, proposals, and analog + digital technologies. Students will work in teams developing concepts for compelling and visceral experiences. Extensive production time spent outside of class hours is highly recommended. A CalArts alumnus, Jesse Lee Stout is the Creative Director in Moment Factory's Los Angeles studio. His projects range from theme parks, brand experiences, to concert design. Jesse has recently done creative and/or video direction for Muse, Rihanna, Jay Z, Drake, Tove Lo, Beck, and The Weeknd. Attendance at all sessions is required. Limited to 14 students.

Description

This workshop is open to the Institute. Manija Emran is an Afghan Graphic Designer and Typographer based in Los Angeles. With a love of the handmade, an eye for detail and an extensive typographic background, Manija studied in Montreal before working with celebrated designers across the world: Vince Frost and Thomas Manss in London, Philippe Apeloig and Pascal Colrat in Paris, VSA Partners in New York and Prologue Films & The Mill in Los Angeles. Her work spans all forms of design: logo, book and packaging design, signage and poster design, typography, title sequence and motion graphic design. Her work includes handmade title sequences for Rango, Robin Hood, London Boulevard, Bad Teacher, The Help, Fright Night, Snow White and The Huntsman, Manhunt, We are the Giant and most recently The Huntsman. One of the Top Ten Women of Title Design by the Art of the Title. Attendance at all sessions is required. Limited to 14 students.

AGRA032 - Build Your Own World and Zine

General

Course Long Title
Build Your Own World and Zine

Subject Code Course Number
AGRA 032

School(s)
School of Art

Academic Level
UG - Undergraduate

Credit Hours

Min Credit Hours:
1

Description
This workshop will guide students build their own fully realized, fictional world (complete with characters and setting) from the primordial ooze of their imaginations. The goal will be to produce a small zine or mini-comic that describes the rules, characters (if there are any), tone, and environment of this world. Sort of like a bible.
World building can be useful for artists interested in game design, pitching a tv show or movie, graphic novels, Dungeons and Dragons; the applications are infinite! Students will study and compare notable artists' constructed realities as disparate as Henry Darger's Vivian Girls and the Marvel Cinematic Universe. There is freedom in terms of narrative style and tone; the artist's universe can be character driven, or focused entirely on something abstract. As long as the built world feels like its own distinct "reality" with its own rules and style. Attendance at all sessions required.

Registration Restrictions

AGRA033 - Games on Paper

General

Course Long Title
Games on Paper

Subject Code Course Number
AGRA 033

School(s)
School of Art

Academic Level
UG - Undergraduate

Credit Hours

Min Credit Hours:
1

Description
In this workshop we'll make cut and fold, two-player board games. We'll start by playing games together, observing what their play can mean and evoke, while considering key principles of game design. Throughout the rest of the workshop we will work in pairs to make our board games, writing game rules that facilitate meaningful play and express an experience or point of view. Using familiar tools for layout, illustration, and graphic design, we'll make, print, and assemble paper boards and game pieces that facilitate gameplay and express the game's themes. Finally we'll playtest each other's games as a group.
Experience with layout, illustration, and typesetting in Adobe InDesign or

Illustrator preferred, but not needed. Willingness to play required. No prior game design knowledge or game making experience needed. The game critical, game skeptical, or game curious are all encouraged. Attendance at all sessions required.

Subject Code

AGRA

Course Number

237

School(s)

School of Art

Academic Level

UG - Undergraduate

Credit Hours

Min Credit Hours:

2

Description

Alternative Screen Printing Techniques provides an introduction to hand-based screen printing as an alternative to digital methods. While digital printing may be more convenient, this course emphasizes the tactile process of creating stencils by hand. Whether using positive or negative stencils, the goal is to "block out" areas on the screen, allowing ink to pass through the remaining open sections and create prints.

Throughout the course, students will explore a range of stencil-making techniques and materials, including paper, acetate, contact paper, tape, commercial block-out, wax crayons, oil pastels, resist methods, tusches, and photograms. The course emphasizes experimentation and improvisation as well as combining techniques to discover new outcomes. Students who enroll must have taken the mandatory Print Lab orientation and paid the required lab deposit to use the space before signing up for this course.

Description
Required for BFA4 students in Graphic Design, and must also register for AGRA-402. Course open to BFA Graphic Design students only. The focus of this course is on refining design work and preparation for the professional world. Projects focus on advanced issues of representation and communications that are also more independently motivated. Emphasis in the second semester is placed on the development of both print and electronic portfolios. The Lecture course allows time and instruction for presentations, research, analysis, interpretation, and discussion.

Description
This course provides an administrative and credit structure for a series of workshops by visiting graphic designers. The class will convene on around three occasions over the course of the semester for a visiting designer lecture (open to all students in the program) followed by a 2-3

day intensive workshop (open only to students enrolled in the class). Curated by the faculty with input from students, these workshops will expose students to a range of contemporary design agendas, practices, and processes, and will put students in direct dialogue with an international network of influential design thinkers and practitioners. The intensive workshop format will demand that students work productively under pressure and collaborate effectively. Students must complete all workshops in order to receive credit for the course.

Description
Required for BFA3 students in Graphic Design.

Imagemaking I provides a structure for an introduction to essential image-making materials and techniques. The course is centered on the divide between hand and digital processes and styles, and offers a platform to explore and experiment in all directions and combinations. Image I pays close attention to current trends in art and graphic design for inspiration and resistance. The course is fast paced and designed to be an starting point for working processes that can be mastered later in Imagemaking II and/or independently.

Description

Do you love seeing the Graphic Design Program's Visiting Designers but wish you could delve deeper AND get credit for attending the lectures and presentations? This class will achieve that!

Each student (or possibly several students) will be assigned at least one Visiting Designer for which they'll do the following:

Before each presentation: Research the person's work; make a poster; introduce the presenter.

After each presentation: Produce a (critical) review of the presentation or lecture or journalistic coverage. Whichever form is chosen, the piece should take a visual form. It can be "straight" writing; a visual essay; a critical fiction; or visual journalism.

The outcome will be a zine that compiles all the writing and documents the Series. All students will be required to attend the Visiting Designer presentations and engage the visitor by asking questions and/or engaging conversation.

Description

Designing The Design Centre is part one of a two-semester (year-long) course for Graphic Design students who are interested in collectively conceptualizing, developing, and articulating a model for The Design Center at CalArts. The Design Center is potentially a physical student-centric design studio that serves CalArts students, staff, and faculty with advice, tutoring, and design services. This course will involve design research, strategic thinking, written and visual presentations and working on branding, identity and implementation strategies. The course will help students develop models for a practice that considers design's practical, educational and social role within a community.

Description

Mutant Design is a series of upper level graphic design seminars that deal with relevant and pertinent topical issues that usually exceed the traditional boundaries of Graphic Design. Reading, discussion, assigned projects and/or field trips may be used to engage students to examine their work in the context of a specialized dialog. Please refer to specific

course descriptions as these specify the topic of the particular class.

The Mutant Design series of classes offers studies that extend beyond traditional disciplinary boundaries of graphic design. This Future of Publications class will take the form of a design think-tank to imagine potential compelling 'publication' experiences given the increasing sophistication and diversity of modes and means. We'll explore what forms these encounters might take, what might be different motivations, what they might look like, and where and how they might happen.

Description
This course is designed for anyone who is new to Cinema 4D and wants to learn how to create 3D stills and animation. The course covers Cinema 4D's interface, working within a 3D environment, modeling using the built in primitive and NURBs objects, how to apply textures and lighting effects, using cameras and scenes, working with 3-D typography, animation strategies, using expressions, MoGraph and Cinema's built in distortion effects. We will also cover Cinema 4D's live integration with After Effects. This is a hands on project based course. Work is focused on using graphic means to make graphic communication. Experimentation is encouraged. No previous experience with Cinema 4D is required. After completing this course, the student should have an in-depth understanding of the program and how to work with Cinema4D in a production environment.

AGRA470 - Advanced Coding for the Web

General

Course Long Title
Advanced Coding for the Web

Subject Code Course Number
AGRA 470

School(s)
School of Art

Academic Level
UG - Undergraduate

Credit Hours

Min Credit Hours:
3

Description
This course covers a broad spectrum of coding techniques that will enable students to create contemporary, responsive webpages. While discussions about design and usability are encouraged, the central focus will be on front-end development. Students will write a lot of code.

The class will start with a review of the basics: how to properly mark up webpages with semantic HTML and styling them with CSS to create responsive and mobile-first web pages. Focused mini-projects will then tackle specific issues, such as web typography; CSS layout, transforms, transitions, and animations; and the basics of

JavaScript and jQuery.

Prerequisites: A basic understanding of HTML and CSS. Ideally, students should have coded a website before and be comfortable using a text-based code editor. More importantly, students must have a real interest in web design, the urge to fiddle with code, and the ability to be proactive and figure things out.

Registration Restrictions

General

Course Long Title
User Experience Design for the Web

Subject Code Course Number
AGRA 471

School(s)
School of Art

Academic Level
UG - Undergraduate

Credit Hours

Min Credit Hours:
3

Description
The course focuses on the visual and functional aspects of user experience design for the web. The projects will be geared towards creating mockups and prototypes. While not worrying about coding, we will deeply explore the project phases necessary to create successful user experiences: from defining goals, target audiences, and functionality requirements, to developing a site structure, wireframes, and visual mockups. Along the way we will discuss research, user personas, web typography, responsive web design, and mobile web issues. It is not necessary for you to have coding skills to take this course.

Description
CalArts Collaborates: Design for Non-Profit Partners
In this year-long elective, students will partner with a non-profit organization to create a series of projects that address an urgent social or political issue based on a prompt from the organization. Working in teams from the School of Art and the School of Film/Video, students will respond to a prompt and create an innovative set of outcomes / forms of audience engagement and communication that address a young, global audience. Outcomes are open-ended and may span a range of platforms and media (ie short live-action or animated public service announcements, social media/web presences, wearables, maps, workshops, posters, etc.). Final outcomes will be produced in actual scale / length and media.

Students will conduct research, present proposals, and develop prototypes of all visual and material outcomes. They will create a production schedule and work within a budget. Students will present their work to the faculty, members of the non-profit organization, and other members of the CalArts community. The course may also offer the option for international travel in June to present final outcomes.

This is the first semester of a year-long course. To receive credit, students are expected to enroll in the Spring semester of the course as well. The emphasis of each session is as follows:
Fall semester: research, proposals, and project development.
Spring semester: final production, presentations and showing / exhibition, possible option for international travel.

Description
In this combined seminar/studio course we will examine urgent critical issues that inform the field of design today, and engage those conversations through visual work. Through weekly readings and discussions, we'll examine the ways in which politics, social movements, radicality, and structures of power shape and determine contemporary design discourse, and explore the ways that makers interrogate these ideas. Occasional guests will provide alternate perspectives, enriching the discourse. A few self-directed studio projects that interpret, question, and extend ideas from the readings will demonstrate an ability to engage with avant guard creative praxis.

Designing for Spaces (EoYS)
Course open to BFA 3 and 4 Graphic Design students. Others by permission of instructor only. D300 and D301 galleries (along with The Motion Show in the Bijou). The website, posters, announcements, e-mail blasts, social media, etcetera, are considered supporting material. But another way to look at these different elements is as different types spaces in which the exhibition is communicated and experienced. This class examines what types of encounters and experiences of the work produced in the program that these different spaces might afford. How can we imaginatively, yet pragmatically, share the Program's accomplishment to different audiences? Students will work collaboratively to focus on different creative and pragmatic aspects of realizing the collective vision for the show.

Special Topics is a series of upper level graphic

design seminars that deal with relevant and pertinent topical issues chosen by the instructors. They are designed to tackle important contemporary issues in a timely fashion. Reading, discussion, assigned projects, or field trips may be used to engage students to examine their work in the context of a focused dialogue. In order for students to take advantage of the diversity of approaches offered by our regular and visiting faculty, this course is designed to be taught by various instructors in each semester and multiple sessions of the same course may be offered in the same semester.

Description
Required for MFA1 students in Graphic Design, and must also register for AGRA-502. Course open to MFA Graphic Design students only.
The MFA1 year of Graduate Seminar is comprised of a series of structured projects and prompts intended to help students develop and discover formal, conceptual and ideological areas of focus. The short time period of each project encourages experimentation, risk-taking, and imaginative responses. MFA students have the option to experiment with a range of different media and ideas, or focus on different ideas within the same medium, or pursue similar concepts/agendas within different media. This flexibility accommodates students with a wide range of educational needs and prepares them with the formal and conceptual skills to produce a thesis. The lecture component of this class focuses on group discussion, led by faculty, surrounding areas of interest pertaining to each specific project.

Alternative Screen Printing Techniques

Subject Code **Course Number**
AGRA 537

School(s)
School of Art

Academic Level
GR - Graduate

Credit Hours

Min Credit Hours:
2

Description

Alternative Screen Printing Techniques provides an introduction to hand-based screen printing as an alternative to digital methods. While digital printing may be more convenient, this course emphasizes the tactile process of creating stencils by hand. Whether using positive or negative stencils, the goal is to "block out" areas on the screen, allowing ink to pass through the remaining open sections and create prints.

Throughout the course, students will explore a range of stencil-making techniques and materials, including paper, acetate, contact paper, tape, commercial block-out, wax crayons, oil pastels, resist methods, tusches, and photograms. The course emphasizes experimentation and improvisation as well as combining techniques to discover new outcomes. Students who enroll must have taken the mandatory Print Lab orientation and paid the required lab deposit to use the space before signing up for this course.

Credit Hours

Min Credit Hours:
3

Description
The syllabus is a standard outcome of education. In the context of graphic design education, this every day format has been utilized to bring innovative and revolutionary ideals into institutions of higher learning. This course examines the syllabus as both a practical teaching tool and as a document of pedagogical philosophy and methods. Through the review and analysis of a broad range of examples, students will examine how teaching philosophy is expressed in learning outcomes, classroom methods and project structure. The final project in the course will focus on the design of a proposed course syllabus and a representative or capstone project.

Description

This course provides an administrative and credit structure for a series of workshops by visiting graphic designers. The class will convene on around three occasions over the course of the semester for a visiting designer lecture (open to all students in the program) followed by a 2-3 day intensive workshop (open only to students enrolled in the class). Curated by the faculty with input from students, these workshops will expose students to a range of contemporary design agendas, practices, and processes, and will put students in direct dialogue with an international network of influential design thinkers and practitioners. The intensive workshop format will demand that students work productively under pressure and collaborate effectively. Students must complete all workshops in order to receive credit for the course.

General

Course Long Title
GD Program Visiting Designers: The Class

Subject Code	Course Number
AGRA	638

School(s)
School of Art

Academic Level
GR - Graduate

Credit Hours

Min Credit Hours:
1

Description

Do you love seeing the Graphic Design Program's Visiting Designers but wish you could delve deeper AND get credit for attending the lectures and presentations? This class will achieve that!

Each student (or possibly several students) will be assigned at least one Visiting Designer for which they'll do the following: Before each presentation: Research the person's work; make a poster; introduce the presenter. After each presentation: Produce a (critical) review of the presentation or lecture or journalistic coverage. Whichever form is chosen, the piece should take a visual form. It can be "straight" writing; a visual essay; a critical fiction; or visual journalism.

The outcome will be a zine that compiles all the writing and documents the Series.

All students will be required to attend the Visiting Designer presentations and engage the visitor by asking questions and/or engaging conversation.

Credit Hours

Min Credit Hours:
2

Description
Designing The Design Centre is part one of a two-semester (year-long) course for Graphic Design students who are interested in collectively conceptualizing, developing, and articulating a model for The Design Center at CalArts. The Design Center is potentially a physical student-centric design studio that serves CalArts students, staff, and faculty with advice, tutoring, and design services. This course will involve design research, strategic thinking, written and visual presentations and working on branding, identity and implementation strategies. The course will help students develop models for a practice that considers design's practical, educational and social role within a community.

Animating with Cinema 4D

Subject Code

AGRA

Course Number

665

School(s)

School of Art

Academic Level

GR - Graduate

Credit Hours

Min Credit Hours:

2

Description

This course is designed for anyone who is new to Cinema 4D and wants to learn how to create 3D stills and animation. The course covers Cinema 4D's interface, working within a 3D environment, modeling using the built in primitive and NURBs objects, how to apply textures and lighting effects, using cameras and scenes, working with 3-D typography, animation strategies, using expressions, MoGraph and Cinema's built in distortion effects. We will also cover Cinema 4D's live integration with After Effects. This is a hands on project based course. Work is focused on using graphic means to make graphic communication. Experimentation is encouraged. No previous experience with Cinema 4D is required. After completing this course, the student should have an in-depth understanding of the program and how to work with Cinema4D in a production environment.

AGRA670 - Advanced Coding for the Web

General

Course Long Title

Advanced Coding for the Web

Subject Code

AGRA

Course Number

670

School(s)

School of Art

Academic Level

GR - Graduate

Credit Hours

Min Credit Hours:

3

Description

This course covers a broad spectrum of coding techniques that will enable students to create contemporary, responsive webpages. While discussions about design and usability are encouraged, the central focus will be on front-end development. Students will write a lot of code.

The class will start with a review of the basics: how to properly mark up webpages with semantic HTML and styling them with CSS to create responsive and mobile-first web pages. Focused mini-projects will then tackle specific issues, such as web typography; CSS layout, transforms, transitions, and animations; and the basics of JavaScript and jQuery.

Prerequisites: A basic understanding of HTML and CSS. Ideally, students should have coded a website before and be comfortable using a text-based code editor. More importantly, students must have a real interest in web design, the urge to fiddle with code, and the ability to be proactive and figure things out.

Registration Restrictions

General

Course Long Title

User Experience Design for the Web

Subject Code

AGRA

Course Number

671

School(s)

School of Art

Academic Level

GR - Graduate

Credit Hours

Min Credit Hours:

3

Description

The course focuses on the visual and functional aspects of user experience design for the web. The projects will be geared towards creating mockups and prototypes. While not worrying about coding, we will deeply explore the project phases necessary to create successful user experiences: from defining goals, target audiences, and functionality requirements, to developing a site structure, wireframes, and visual mockups. Along the way we will discuss research, user personas, web typography, responsive web design, and mobile web issues. It is not necessary for you to have coding skills to take this course.

Min Credit Hours:
2

Description
Open to graphic design program BFA4s and MFA2s enrolled in Type Design.

This course is an historical survey of the evolution of type design. Encompassing technical, functional, cultural and aesthetic development from cave painting to Keedy Sans. Particular emphasis is placed on the type designer as author and maker. Students will be asked to do original research on an assigned topic.

Academic Level
GR - Graduate

Credit Hours

Min Credit Hours:
3

Description
Open to very limited numbers of graphic design program MFA2s and 3s, and BFA3s and 4s, by permission of instructor. Public Projects are a series of faculty-led course-based projects that recruit students as collaborators in graphic design research, conversation, and production that engages an audience beyond the institution. These projects provide upper-level students with high profile, real-world platforms for engagement with the field, and create bridges between study and practice. Public Projects often encompass activity exceeding the scope and structure of traditional course work, and demand significant commitment, flexibility, and maturity from their participants.

Public Projects Series: Banana

Open to very limited numbers of graphic design program MFA2s and 3s, and BFA3s and 4s, by per-mission of instructor.

Knock knock!
Who's there?
Banana!
Banana who?
Banana's not here.
Banana split!
Or at least the Banana you know has split.
Banana is still a space for fearless and furious making. This semester, Banana invites you to convene for advanced image-making, driven by the systems you set in motion. We will explore methodology, parametrics, automation, algorithm,

processing, and any other proxies your hands can imagine.
Knock knock!
Are you in?

Credit Hours

Min Credit Hours:
3

Description
CalArts Collaborates: Design for Non-Profit Partners
In this year-long elective, students will partner with a non-profit organization to create a series of projects that address an urgent social or political issue based on a prompt from the organization. Working in teams from the School of Art and the School of Film/Video, students will respond to a prompt and create an innovative set of outcomes / forms of audience engagement and communication that address a young, global audience. Outcomes are open-ended and may span a range of platforms and media (ie short live-action or animated public service announcements, social media/web presences, wearables, maps, workshops, posters, etc.). Final outcomes will be produced in actual scale / length and media.

Students will conduct research, present proposals, and develop prototypes of all visual and material outcomes. They will create a production schedule and work within a budget. Students will present their work to the faculty, members of the non-profit organization, and other members of the CalArts community. The course may also offer the option for international travel in June to present final outcomes.

This is the first semester of a year-long course. To receive credit, students are expected to enroll in the Spring semester of the course as well. The emphasis of each session is as follows:
Fall semester: research, proposals, and project development.
Spring semester: final production, presentations and showing / exhibition, possible option for international travel.

AGRA690C - Critical Conversations

General

Course Long Title
Critical Conversations

Subject Code Course Number
AGRA 690C

School(s)
School of Art

Academic Level
GR - Graduate

Credit Hours

Min Credit Hours:
2

Description
In this combined seminar/studio course we will examine urgent critical issues that inform the field of design today, and engage those conversations through visual work. Through weekly readings and discussions, we'll examine the ways in which politics, social movements, radicality, and structures of power shape and determine contemporary design discourse, and explore the ways that makers interrogate these ideas. Occasional guests will provide alternate perspectives, enriching the discourse. A few self-directed studio projects that interpret, question, and extend ideas from the readings will demonstrate an ability to engage with avant guard creative praxis.

Description
This class is intended to expand your knowledge of motion graphics with a series of projects that focus on typography as a cinematic expression. Using this lens, you'll look beyond the title sequence and find challenges that reflect motion in a wider range of contemporary design. With a directorial point of view, the class will engage in the skills of professional practice, from pitch to delivery. These projects encourage clever solutions that quickly move from concept to storyboard to animation. This is a great opportunity to grow your portfolio by focusing on innovation ideas as much as formal solutions.

Course priority for Graphic Design MFA students, and may be open to MFA students in other Schools, by permission of instructor.

Description
Designing for Spaces (EoYS). Course open to MFA Graphic Design students. Others by permission of instructor only. D300 and D301 galleries (along with The Motion Show in the Bijou). The website, posters, announcements, e-mail blasts, social media, etcetera, are considered supporting

material. But another way to look at these different elements is as different types spaces in which the exhibition is communicated and experienced. This class examines what types of encounters and experiences of the work produced in the program that these different spaces might afford. How can we imaginatively, yet pragmatically, share the Program's accomplishment to different audiences? Students will work collaboratively to focus on different creative and pragmatic aspects of realizing the collective vision for the show.

Special Topics is a series of upper level graphic design seminars that deal with relevant and pertinent topical issues chosen by the instructors. They are designed to tackle important contemporary issues in a timely fashion. Reading, discussion, assigned projects, or field trips may be used to engage students to examine their work in the context of a focused dialogue. In order for students to take advantage of the diversity of approaches offered by our regular and visiting faculty, this course is designed to be taught by various instructors in each semester and multiple sessions of the same course may be offered in the same semester.

Description

This course receives credit under Topics in Photo History.

Open to Art School BFA 3 and above. This course will be open to students at other year levels, and in other Schools, by Permission of Instructor.

When artists, or photographers approach an archive, we are concerned with two activities: working with existing archives for research or inspiration, and making work that will itself be archived. Both of these activities can become complicated as the archive has established an organization that often hinders a more complex dealing with images. We will start with the assumption that the archive is not only a place of storage but also a place of production, where our relation to the past is materialised and where our present writes itself into the future; thus, that the archive can be understood as a place of negotiation and writing. Along the reading of seminal texts on the topic, we will look at photographic and artistic works that challenge the notion of the archive and propose a different dealing with it.

Description

This practicum workshop is open to the Institute. Performing Stories: Camera, Audience, and the Real In a time where the boundaries between the "lights, camera, action" side of performance and the "filter, tag, post" side of performance dissolve even further, it is becoming increasingly difficult to determine the conditions of "the real." What is an authentic image? Does it bear any more or less on our thinking, our behavior, than the inauthentic image? Who gets to determine what is real? The author? The audience? To explore these and other questions, we will spend the week looking at the work of Kalup Linzy, Amalia Ulman, Nikki S. Lee, and "Joanne the Scammer" among others, while creating, editing, and publishing our own stories to our various followers and audiences. Attendance at all sessions is required. Limited to 14 students.

Min Credit Hours:
1

Description
This practicum workshop is restricted to Art School BFA students.
Workshop meets on January 11, 12, 14, 15, and 19 from 6-8:50 p.m. in the Photo Lab. Attendance at all sessions is required. There is a \$70 materials fee for this workshop.
In the age of digital photography we have access to create and see the images we create in a matter of seconds, but rarely think about the print and the image as an object. This class will explore the alternative process known as the Albumen process. Using the egg white and salt as our sizing material and then coating the Albumen paper with silver nitrate This process dates back to the beginning of the invention of photography during the 19th century. We will be combining digital techniques of the 21st century to produce our large digital negatives. This class will include in-class demonstrations, open studio time, and lectures describing alternative processes used by other artists. The goal of the class is to start a cohesive project, using the Albumen process.

Credit Hours

Min Credit Hours:
1

Description
The goal of Lighting Lab is help students to choose light sources based upon their creative needs, considering how the technical side of photography is also creative, whether in a fine art context or in other professional settings. It introduces students to different lighting sources such as strobes, off-camera flash, LED, available light, and lighting modifiers that can bring nuance to each source. It will cover syncing between these sources and your camera, and how to choose the ideal light source for a shoot. If time allows, some DIY solutions to improvise in a pinch during a shoot when the proper equipment is not readily available.

Description

This practicum workshop is restricted to Art School BFA Students in the Photo and Media Program. This class focuses on the pathways our digital images take between the camera and their printing or digital presentation. This includes the processing of raw files between Photoshop and Lightroom, the organization of our images into a database, and their archiving, including back-up, storage and the use of meta-data. Workshop meets on January 22, 23, 24 and 25 from 6:30 - 10:20 pm in the MacLab. Attendance at all sessions is required. Limited to 18 students.

Description

Digital Photography's Game-Changer - High Dynamic Range (HDR) Photographic Technique:

Advanced workshop teaching the HDR system for students with a solid grasp of digital photography. Here we will explore how High Dynamic Range extends the boundaries of digital photography to produce image quality not seen in the past. Students are required to bring DSLR, tripod, computer (or access outside of class) with image editing software (preferably AdobeCS & Bridge). HDR software Photomatix will be provided for download to students by HDRsoft corp. A group show of students work at coarse end would be highly recommended.

Course coverage: Cameras, file types, bit depth and sensor size; Exposing for HDR imagery; Bracketing; Pre-blending choices in Lightroom or AdobeBridge; Photomatix blending software & tonemapping, "de-ghosting" and chromatic aberrations; Working with RAW format images; Curves, posterization and the histogram; Advanced blending using masks; Final HDR editing in Photoshop environment; Alternative HDR uses and converting the HDR image to B&W.

Description

This workshop will focus on the manual elements of book binding. Students will be able to utilize the CalArts print lab and the resources it has to offer. Students can expect to learn how to fold and sew signatures of a book, saddle stitch with staples, and perfect bind. Students will also be able to explore different methods of bookmaking, such as stab binding and coptic binding through smaller demos and exercises depending on interest. The workshop will introduce basic elements of binding at the beginning of the semester as well as help student's make their own projects at the end of the semester. The workshop will meet every other week (7 total meetings) throughout the semester.

Min Credit Hours:

1

Description

In this workshop, we'll be working as a type of haunt hunter. We'll first identify the spirits that haunt our everyday, examining the multitude of histories and site-specific spirits that dictate the institutions we join, the spaces in which we live. Equipped with cameras, we'll experiment with what it looks like to document the

felt but unseen and the everyday specters as Jacques Derrida defined as the "visible and invisible, both the phenomenal and nonphenomenal: a trace that marks the present with its absence in advance."

The mindless and hysterical banality of the evil presented in The Exorcist is the most terrifying thing about the film... At the end of The Exorcist, the demon-racked little girl murderess kisses the Holy Father, and she remembers nothing. The grapes of wrath are stored in the cotton fields and migrant shacks and ghettos of this nation, and in the schools and prisons, and in the eyes and hearts and perceptions of the wretched everywhere, and in the ruined earth of Vietnam, and in the orphans and the widows, and in the old men, seeing visions, and in the young men, dreaming dreams: these have already kissed the bloody cross and will not bow down before it again: and have forgotten nothing.
-James Baldwin, "The Devil Finds Work"

APHM052 - The Disjunctive Image

General

Course Long Title

The Disjunctive Image

Subject Code

APHM

Course Number

052

School(s)

School of Art

Academic Level

UG - Undergraduate

Credit Hours

Min Credit Hours:

1

Description

With the status of the image destabilized and a glut of images at our fingertips, disjunctive images made within and without a camera have become part of the language of contemporary photography. This workshop begins with an overview of various strategies of photo-montaging and fragmenting images throughout the 20th and 21st centuries, from the exploration of nonsense by Dadaists through current practices that work with and react against the digital image culture. Students start by establishing their own image archive to build upon and pull from to produce new work. They will then incorporate selections from this archive in exploring different approaches to creating disjunctive images through compositing in photoshop, and through photographing with the camera using the aids of reflections, dissections, and re-photographing.

UG - Undergraduate

Credit Hours

Min Credit Hours:
1

Description

How does one, how does an artist script a self? We will know ourselves and know what we think when we find the words. This workshop will serve as a testing ground for each of us to try out modes, voices, rhythms, structures, and approaches that enable us to articulate some sentiment in writing and capture a vision. We will read and discuss models, trying our hand at different forms, from the personal and diaristic to the exhibition review, artist statement, press release, contributor's note, and blurb. Writing is thought in action, as it's happening, often labored and slow but also fleet and high as a kite. It needn't look any certain way because thoughts can look any which way, it need only function for your meanings.

"Man does not exist prior to language, either as a species or as an individual."
-Roland Barthes

General

Alternative Photo Processes: Cyanotype

School(s)
School of Art

Academic Level
UG - Undergraduate

Min Credit Hours:
1

This course will focus on the experimenting and investigating the photographic process of cyanotype.

Students will be introduced to making images in this slow to react and inexpensive process in which photo sensitive materials react uniquely to ultraviolet light creating a cyan/blue image on specially coated paper and other materials. The chemical process is based on two combined chemicals coated on a surface and is limited to processing and fixing in water. Originally developed in the 1840s, cyanotype is both visually specific in color and in tonal range. The process has been a staple in photo historical surveys and in recent years has become both "hands on" and an aesthetically and informational counterpoint to contemporary computer / digital methods. The class requires full attendance, at least three small final images, and one larger image.

RGAPHM - Photo/Media Program Only

General

Not Obvious Self Portraiture

School(s)
School of Art

Academic Level
UG - Undergraduate

Min Credit Hours:
1

This course combines lighting workshops, lectures, discussions, and critiques to help students develop a conceptually driven project that expands the definition of self-portraiture within an artistic practice. In addition to traditional portraiture, we will consider the genres of landscape and still-life photography as forms of self-portraiture that negotiate representation and visibility.

Photo Bookmaking

School(s)
School of Art

Academic Level
UG - Undergraduate

Min Credit Hours:
1

In this workshop, students will design and produce a photo book. The class will briefly cover the history of the artist book, contemporary trends in book design, and the tradition of the photo book. With the aid of readings, discussion, and workshops, you will develop the content, sequence, graphic design, and materials of a photo book. By the end of the course, you will layout your book in Indesign, and print and bind it using the resources on campus. In addition to our six meetings, you will be expected to attend a workshop on book binding at the Print Lab outside of class time.

Nothing Leaves the Studio w/o a Photo

School(s)	Program(s)
School of Art	Photo Media

Academic Level
UG - Undergraduate

Min Credit Hours:
1

Through a balanced blend of formal techniques, emphasizing studio lighting, composition, and color theory, students will learn to capture their artworks and exhibitions with precision and panache. The course also covers gonzo iPhone photography and creative editing applications, encouraging students to use and make the most of tools that are readily available.

Students will tackle post-production, including image culling and retouching, to grasp the nuances of artwork representation, exhibition documentation, portfolio development, and establishing an online presence in a professional manner. By exploring both traditional studio methods and mobile phone photography, students will gain a practical skill set, ensuring their works are represented authentically and compellingly, both in formal settings and in the realm of contemporary digital media.

Description

Analog in the New Lab: Course open to BFA1 Photo/Media students only. New Lab is a semester-long class for all BFA-1 and BFA-2 transfer students in the Photography and Media Program. It is a course that provides the critical base for making work in the facility. The intent of this class is to orient incoming students to the CalArts Photography Facility and its production possibilities. The coursework includes a hands-on approach to photographic and image techniques widely used in the Program. This course will focus on the fundamentals of analog photography. Students will learn how to properly function 35mm cameras, and use of meters, apertures, shutter speeds. We will discuss various equipment, film and paper options out on the market that will best fit student's needs. Students will learn how to develop their own black and white film and print on RC and Fiber based Papers. We will focus on proper darkroom setup and workflow. Knowledge of multiple enlarger types and brands will be gained. Mixing of chemicals and the use of different dilutions ratios will also be discussed. The intent of Analog in the New Lab is to expedite student access to the culture of technical production within the Photography and Media Program.

APHM	110C

School(s)
School of Art

Academic Level
UG - Undergraduate

Credit Hours

Min Credit Hours:
2

Description

This course offers students a foundation in video and sound recording, and an exploration of video art in the contemporary art world. We will focus on post production including sound design and color correction, and briefly touch on installation preparation. In the class we'll watch historical and contemporary single channel and video installation work, read essays on video art and relevant subjects, hold critiques of student work, and have technical tutorials.

Academic Level
UG - Undergraduate

Credit Hours

Min Credit Hours:
2

Description

This course offers students a continued exploration of video and sound production in a contemporary art context. Students will continue to work with Adobe PremierePro and ProTools, as well as learn how to create and present video installations with video projectors, monitors, screens, and speakers. Working with digital high definition cameras, we will explore advanced movement techniques for camera, as well as what it's like to work with a small crew. Learning will be based on students' own moving image experiments, with the goal of a finished project at the end. Students can bring existing projects or develop new ones to work with along the way. The course will screen historical and contemporary video works, read relevant essays, and visit exhibitions that will expand students' visual literacy in video art, experimental documentary, and sound art.

Registration Restrictions
RGAPHM - Photo/Media Program Only

include conversations around editing and sequencing specific to the book form as well as learning to layout and design a book using Adobe InDesign. We will also cover book binding techniques. Throughout the term students will develop their own project using the medium of the book as a final project.

APHM110G - Sound Off

General

Course Long Title
Sound Off

Subject Code	Course Number
APHM	110G

School(s)
School of Art

Academic Level
UG - Undergraduate

Credit Hours

Min Credit Hours:
2

Description

This advanced digital media course explores the continuum between sound and silence in digital time-based work. Through screenings, listening sessions, readings and guest artist visits, we will think through artists' strategic implementations of silence and its ability to honor the inarticulable, refuse to incriminate, and preserve opacity. We will also listen closely to artists' imperatives to generate sound as they re-articulate historical narratives, resist erasure, and complicate the dynamics of who can be heard. As a class we will think about the limits of a visual frame, and the possibilities that offscreen and onscreen sound can offer. We'll investigate the voice as a medium, strategic use of diegetic and nondiegetic sound, and the history of recorded sound, among other topics. We will begin by learning about the materiality of sound waves and the recording devices that allow us to repeat them. Students will learn technical skills for recording audio, editing audio and video, and spatializing sound in installation. Each student will build their own audio archive to pull from, as well as learn to source from pre-existing archives. Over the course of the semester students will be expected to complete two finished works plus

APHM110E - Building a Book

General

Course Long Title
Building a Book

Subject Code	Course Number
APHM	110E

School(s)

Description
Think Big is a semester-long course that provides students with large-scale analog printing using traditional darkroom techniques. It is designed to expand students' knowledge and skills in analog photographic printing. The goal of this course is to understand analog image processing beyond the fundamental or introductory level and take the students through the entire process from film processing, test prints making, and producing exhibition quality final prints. Emphasis is placed on building and employing practical darkroom processing techniques, and understanding how to create a better analog workflow from beginning to end. Students will work from their own images in class and should expect to produce one to two large-format silver-gelatin or C41 prints by the end of the course. There is a \$75 course fee, which provides most materials needed to fulfill requirements, however students should be prepared to potentially purchase additional materials if their proposed project requires it. A \$50 lab deposit is also required for use of the lab within and outside of class time.

Description
Beginning Sound and Video is a semester-long technical course for all BFA-1, BFA-2, and transfer students in the Photography and Media Program. The intent of this class is to introduce students to the fundamentals of audio and video production, including camera operation, lighting, and sound recording. Coursework in post-production techniques (editing, sound design, playback and installation preparation) will also be covered. Beginning Sound and Video serves as an overview of the basic principles and technical skills required for students beginning to use sound and video in their work.

Description
Course open to Photo/Media Program only, by Permission of Instructor only. Not open to BFA1 students.
Color Lab is a semester-long course that provides students with a basic background in the history, theory, and materials of color photography. Emphasis is placed on navigating the transitions between traditional film-based production and digital techniques. The coursework is designed to provide students with an understanding of the properties of color negative film and its inherit characteristics, with the goal of gaining a working knowledge of the relationships between exposure development, principles of analog and digital color balance, and basic procedures of type C and archival pigment printing. Further discussions will center on a survey of color photography since the 1960s.

Intersection of Art and Architecture

Subject Code Course Number
APHM 311L

School(s)
School of Art

Academic Level
UG - Undergraduate

Credit Hours

Min Credit Hours:
2

Description
Students will choose a site on campus to design and build (using mostly cast off construction materials) a temporary structure/installation. After reviewing and discussing the student design proposals we will collectively decide on the basic concept, design, and collaborate on further developing the project. Some aspects of development will include scale, form/s, texture, light and pattern, accessibility, site engagement, activation, material use and distribution, stability, structural and aesthetic connections and material transitions, etc... As a multidisciplinary collaboration, the class as a whole will build the final structure/installation.

We will discuss a selection of artists, designers and topics including; Gordon Matta-Clark, Dennis Oppenheim, Alison Knowles, Sarah Oppenheimer, Nancy Holt, Noah Purifoy, Hague Yang, Andrea Zittel, Buckminster Fuller, Chris Burden, JB Blunk, Liz Glynn, Rafa Esparza, Beatriz Cortez, Frederick Kiesler, Simone Leigh, Bauhaus, the intersection of art and architecture, ritual use of spaces, functionalist and vernacular architecture, design and engineering standards, spatial design, modular building, sustainable building materials and methods, sympathetic architecture, form light shadow studies, the

politics of public space, and gendered spaces.

This class will function entirely collaboratively, meaning skill/knowledge sharing is a must and attendance and participation in all classes is mandatory.

Min Credit Hours:

3

Description

Apeshit in the Louvre is a graduate-level reading seminar that looks at theories and histories of exhibitions, museums and galleries, thinking specifically about the agency or power of the artist within them. Starting with ways that artists have incorporated the language and conventions of exhibition into the very form of their work and contemporary protests for the expansion of access, decolonization and social relevance, we will consider how the politics and meanings of galleries, museums and public spaces themselves act upon our works, and how our works, in return, act upon them as a material. Considering histories of the museum, the gallery and biennial, theories of the expanded field, site-specificity, institutional critique, interventionism, performance art, relational and socially-based practices, the "artist as curator," and straight up protest, we'll encounter works by: Emily Jacir, Aruna D'Souza, Amy Longtree, Coco Fusco, Bridget Cooks, Steven Nelson, the Carters (Beyoncé and Jay Z), Decolonize Museums, Brian O'Doherty, Avery Gordon, Cameron Roland, Harald Szeeman, Alice Koenitz's Los Angeles Museum of Art (LAMO), the Equal Justice Initiative's Legacy Museum and Memorial for Peace and Justice, Miwon Kwon, Project Row Houses, Hito Steyerl, Tony

Bennett, Allan Sekula, Fred
Moten and Stefano Harney, Okwui Enwezor, Chantal
Mouffe, the Museum
of Jurassic Technology, Hans Haacke, and more.

Grad Seminar: Show and Tell

Subject Code	Course Number
APHM	325D

School(s)
School of Art

Academic Level
UG - Undergraduate

Credit Hours

Min Credit Hours:
3

Description
Open to BFA students by Permission of Instructor only.

Since the inception of photography, exhibition spaces have played an important role for the medium. Photographic exhibitions initially were used to present technical accomplishments and changing parameters of the physical medium, but the effect of these early shows was formative for discourse about "photography." Making first an argument for photography as art, the exhibitions soon developed their "own" set of possibilities.

This seminar will look at the history of exhibitions that included photography such as in propaganda, or early Modernisms, and track how photography as a creative discourse entered the space of the museum. It will look at shows that were mastered by curators with a very specific agenda and discourse in mind, as well as later exhibitions by individual photographers and artists.

The course will be conducted as a seminar, resting on the existing photographic documentation of the exhibitions. Starting with a close reading of the documentary material and the arrangements of the images in space, the seminar will expand towards the ideas, discourses and theoretical placements that were made through and in the exhibitions. The seminar's intention is to help understand contemporary presentation modes of photographic practices and to create a critical reading of them in relation to their predecessors.

School(s)
School of Art

Academic Level
UG - Undergraduate

Credit Hours

Min Credit Hours:
3

Description
Origins, Copies and Strange Creations

This seminar will survey broad-based ideas about originality, narratives of origin, artistic genius, authorship, photographic reproduction of art and reality, natural history, religious and cultish narratives of strange creations.

Narratives of origin in science and the history of culture whether through a trajectory of evolution or de-evolution, lack or abundance,

construct a worldview often called the 'truth'. The concept 'origin' is a problematic one because an artwork or scholarly work can never be without precedent or understood apart from the historical conditions of its reproduction and reception.

Although cultural theories have debunked ideas like originality, authorship and genius; artist biographies continue to characterize the individual artist as gifted with god-like inspiration. Reproductive technologies have become so widespread that our eventual experience of the "original object" or the idea of the original genome is mediated by prior experiences of them in reproduced forms. Myths and scientific theories of origin, evolution or de-evolution have been used to justify religious fundamentalism, racism, and misogynistic hierarchies.

Students should expect to spend up to \$50 on supplies.

Description

This graduate seminar takes as its subject matter the art of the interview and the interview of the artist. Interviews are both a tool of artists in contextualizing their work and can be the artwork itself. By their nature, they are the realm of discourse and, as such, a place where ideas can be developed and drawn out. This class will start with the history of interview as form and its use in art. For practitioners as diverse as Allen Funt, Studs Terkel, Paul Thek, Dick Cavett, Andy Warhol, Terry Gross, Fischli and Weiss, Hans Ulrich Obrist, Laura Poitras, Frances Stark, and Erroll Morris, the interview has been part information and part performance; a way of delivering texts and a way of undermining them. In the conceptualist era of the late sixties, interviews became a way of unearthing the textual. Magazines like Avalanche, co-founded by Willoughby Sharp and Lisa Bear, and Andy Warhol's Interview were efforts to create a new form.

In anthropology, experimental film, and other mediums, the push and pull between disclosure and performance makes the interview one of the more dynamic and compelling ways of challenging the authority of the camera and the hierarchy of speakers and listeners, writers and readers. With this theoretical understanding of the interview in place, we will visit some of LA's most prominent artists in their work space in order to conduct interviews. These interviews will be created and developed by the students in conjunction with the subject, forming a working relationship that will last long after the interview is over. This is an exclusive opportunity to see a variety of artists' studios and get an inside look at their practice as well as developing a new approach to text.

Description

Film on Photography, Photography on Film / Etic and Emic perception

This is a graduate seminar. We will be looking at several films and art works that position either film or photography as a central critical and cultural agent in contemporary conversations about art, politics and/or as an indispensable agent in deciphering the world's condition and our place in it. Weekly readings come from contemporary popular and critical texts as well as from the social sciences. Particularly relevant will be a discussion of etic and emic perception - the theories around the value of an outsider looking in versus an insider describing their position. Beyond this, there is the conversation of the impact of photography and film positioned as an active agent, protagonist or antagonist, in contemporary communication and art. We will take on the conversation of the intended, actual and metaphoric role of the image (both moving and still) as a powerful actor or misleading character. A significant goal will be to develop a sense of our stake and goal as receivers of image information and reviewing our capacities as well as checking some blind spots. Some written responses will be required and a final

presentation by the students that should be based on the various films, works, writings and topics that have been brought up through our work together.

Description

Open to Art School BFA 2 and above. This course may be open to students at other year levels, and in other Schools, by Permission of Instructor.

ARTIST AS WRITER explores the usage of the written word to promote ideas, describe concepts, illuminate issues, and for the further development of personal expression. Through the practice of writing, students will incorporate various scripting techniques as well as be presented with elements of narrative creation. The course will introduce students to aspects of writing suitable for print media, digital media, the Internet, and other forms of propaganda. Students will be encouraged to write for impact. Through a series of lectures, conversations, readings, and the practice of writing, students will be presented with a variety of tasks that should result in the enhancement of effective targeted communication. ARTIST AS WRITER will examine the possible effects that the dual role of Artist and Writer can play in local/national/global community of concerned creative people. Students will be required to read selected texts and be expected to write.

Description

Open to Art School BFA 2 and above. This course may be open to students at other year levels, and in other Schools, by Permission of Instructor. This course is dedicated to the making of moving pictures: projects whose defining characteristic is that they move and change over time, including video, film, or the animation of still images, performance for the camera, magic lantern shows, or sound works whose moving images are mental. Each student will be expected to bring a project to develop for the semester, and we will develop our curriculum based upon the concerns that arise from students' projects and shared concerns with our mediums, including sound- image relationships, questions of voice, concept and structure, the arcs and rhythms we develop over time, and the differences between installation and screening contexts. As our larger frame, we will say "league" rather than "course," because whether our projects will be individually or collaboratively produced, we will be making them "in league with each other" - screening, watching, listening, supporting, sharing our development and helping one another to build a critical discourse that surrounds or invades our work, while pushing our potential to move an audience. An association, an alliance, "league" comes from the same root that in Latin means "to bind," as a ligament binds muscle to bone. In other words, for the duration of the semester we will be bound in relation - an element of a social practice that we will also inspect as a

resource, where the relations built in our production and for our reception will be considered within the space of our work.

Description

Despite renewed calls for abolition and criticism of "mass incarceration," the USA continues to have the largest prison and jail population in modern history globally. With a cultural imagination that is littered with images of imprisonment, criminality, the thrill of law breaking and the vilification of otherness, we also have a new vocabulary for the racism, classism and heteropatriarchy of criminal justice and punishment. This class will give us a critical introduction to this discourse and how it is spreading around the world through decolonial and anti-racist movements, while studying the ways in which representations of the prison, punishment and liberation inhabit our art historical canons, and how artists have addressed large and abstract systems in their works and communities.

Description

Open to Art School BFA 2 and above. This course may be open to students at other year levels, and in other Schools, by Permission of Instructor. Freeway Joyride: 21st Century Lane-Change will explore the intricacies of interconnected communities via the Southern California Freeway system (busiest and most congested freeway system in the nation). The concrete ribbons that tie urban, suburban, rural, desert, mountain, and beach areas will be examined with requisite rest stops at unique and highly public sites that make Los Angeles County an endlessly mythical road that reaches past the horizon while touching the imagination of the world. The role of the artist in exploiting the richness of the global impact of local car culture will be investigated via readings, driving tours, as well as through the creation of on-site photographic, written, and performative works.

Description

Open to Art School only. This course will be open

to students at other year levels, and in other Schools, by Permission of Instructor.

Public Persona/Public Spaces will require students to utilize existing public spaces in Los Angeles, San Fernando Valley, and Santa Clarita Valley, to create various narrative and non-linear photo medium-based works that will accentuate the visual presence of the artist across various digital and analog platforms in order to develop an integrated media audience. Aspects pertaining to the generation of a public persona will be discussed and examined in relation to contemporary and historical scholarly/popular references with attention directed at establishing an understanding of how to attract media attention. Public spaces will incorporate established infrastructure, parking lots, streets, and unexpected sites. The course will require some off-campus meetings for photographic purposes. The course will also include lectures and readings pertaining to the concept of public as well as to the variable definition of persona.

Network Culture

The course will examine, analyze, and interpret aspects of individual/group focused attention, mass distraction, the creation/dissemination of concepts/words/products, exponential growth of beliefs/assumptions based on unverifiable text/visual information, and the addictive elements of pop/anti-pop culture. This course will involve readings from various print and electronic sources. Students will be required to view several films. The course will include the development of publicly disseminated projects that will incorporate concepts included in course lectures, discussions, assigned readings/films. Students will be expected to acquire an appreciation of the interaction between the message, messenger, and the recipient. Students will also be presented with a functional approach to manipulating information to achieve a desired response.

Description

Open to students in the Art School only.

This course receives credit under Topics in Photo History.

A strongly revisionist way to approach the history of photography is to bring photographic bookmaking into a center stage. Books are vehicles for complex structures of sustained photographic meaning. In this sense, books can provide an antidote to a fragmentary, inattentive and fashion-driven photographic culture. We will consider the difference between series and sequences, the relation between image, text and graphic design, and the authorial roles played by

photographer, editor, designer, and writer.
Students will produce a sketch for an own book,
or possibly produce one.

Description
Sound and Vision: Documenting the Central Valley

This documentary class has a focus on California's Central Valley, culminating in a trip to the area around Bakersfield and a collaborative project involving sound and pictures. Focusing on documentary traditions in both film and photography including ethnographic films and visual anthropology, the class will develop skills in interviewing as well as technical skills for field recording. We will pay particular attention to the intricacies of the human voice and how speech denotes a place. As the trip approaches, students will develop research proposals and contacts. Possible research topics include: the rich history of Bakersfield including its Basque community as well as The Bakersfield Sound, The Cesar Chavez Foundation in La Paz, the Tule River Reservation, ranching and farming enterprises including the Visalia Cattle Auction, the oil and gas industry, among others. Technical demos in using microphones, sound recording devices, sound editing (including an introduction to Pro-tools) and sound mixing will provide the skills for the production of the collaborative final project. Students will need to arrange their own transportation solutions for the trip to and from Bakersfield. The students will contribute approx. \$75 toward gas and are responsible for their own food and transportation.

Description
The recent development in Boyle Heights has provoked heated debates, a series of actions and a large number of public statements and news coverage on the role of art institutions as a generator of gentrification. The positions in the debates went from "art institutions should leave the neighborhood altogether", and the demand to "take a side", to a view of the development as something normal in the history of the neighborhood that has "always changed". But how exactly would one describe and understand the relation of art and gentrification? What is the role of the artist as producer, and as citizen? How have artists worked in the past with this challenge and how did they position themselves? What are complimentary approaches and assessments to describe and understand the current situation while grasping the complexities of the diverse agents in it? What is, for example, the history of Boyle Heights and how does its reading help us to deal with the current situation? What does it mean to rent, to own, to have property? How do we discuss notions of use value and exchange value in this context? Can we imagine housing to be decommodified; a human right, a common? Is there a chance to break the cycle in which the gentrified are meant to become the gentrifiers? The course will be organized as a collective inquiry on the housing question in relation to the arts. It will not solely look at the situation of Boyle Heights, but take Boyle Heights as an exemplary case study through which we can read a complex of problems, as well as its histories, and possible alternative futures.

Advanced Topics in Photo History: Photo History in the Field

This class is centered on an engagement with the photography archive of the Tejon Indian Tribe of Southern California. Taking our photo history and archive conversations out into the field, we will have the generous opportunity to engage with members of the Tejon Tribe and work with elements of their archive that need research, appraisal and organization. More than a mere grouping of images from the past, here we will consider the relationship of photographs to the making of history, memory, Identity, authorship and sovereignty. The semester will include both visits to the Tejon Tribal Headquarters in Bakersfield and in-class time on campus at CalArts. Transportation will be arranged for those without cars. Beginning with with historical images that have recently been returned from the Smithsonian, First Nations histories of Southern California and the politics of ownership of indigenous materials, we will see where this work takes us, with the possibility of a collaborative project at the end.

Description

This class investigates the possibilities available to artists in Los Angeles using service providers. From printers and framers, to photo-mural installers, to fabricators, foundries, wall-text specialists, and many more, there is a whole industry that has developed in the city to support its artists. Through field trips, interviews, and visiting lectures, we will explore this world of small businesses. Beyond learning of the options these businesses create for artists, students will also learn about the nuts and bolts of starting your own business and about possible jobs they might get in the artistic support industry. A final collaborative project will employ one or more of the businesses we visit.

All classes will take place in the greater Los Angeles. Local travel is required.

Description

This upper-level seminar explores the art world through the lens of interviews and professional practice. Students will engage in conversations with curators, gallerists, artists, and filmmakers, gaining insight into the many roles that shape contemporary art. The course includes field visits to production houses in Los

Angeles--such as framers and labs--to understand how artwork is realized and circulated beyond the institute. We will address practical considerations in exhibition-making, including budgeting, contracts, and planning. Students will also develop interview skills: researching subjects, conducting thoughtful conversations, and transforming these into polished written or recorded pieces.

Description

The course specifically welcomes students to the photography and media program that are not able to join the campus classes in person, have to access the classes from a remote place, or are new to the program. Even though everybody is welcome, a priority is therefore given to new and transfer students.

The class will offer an introduction to the photography and media program in the art school. The main element of the class will be a critique in which students will present their work, and the work they are planning to make. Evolving from those presentations and conversations, students will be introduced to the concepts and histories that are relevant in the photo and media program. Part of the class will therefore also consist of the reading and discussion of a few elementary texts.

The class will as well problematize the current political and social situation that has an impact on our educational systems, and the way we teach, learn and are able to meet and talk to one another. An important element of the class will therefore be to understand who we are and where we come from, and from which time zone we are entering the conversation. We might also invite guests to the class that help us navigate this specific time.

Description

Open to Art School BFA2 and above. This course may be open to students at other year levels, and in other Schools, by Permission of Instructor. Critique - Critique courses within the Photography and Media program center around critique of student work, to offer students critical reception to their projects, while cultivating tools for critical dialogue among the class at large, including vocabulary, methodology, looking and listening skills, as well as historical context for the role of critique in art, documentary, public discourse and social organization.

This interdisciplinary critique will employ queer theory to discuss each student's work. Queering subjects through centers and peripheries of fluid and political identities. Each student will present their work as the subject of one class critique. Each class will include a dinner break for a changing potluck of shared meals. Sharing and providing meals for one another will extend the critical conversation beyond the direct interrogations of the art object to engaging the ideas over kitchen tasks and the bounty of our culinary creations. Eating, cooking and critiquing should touch upon the content, theory and construction of community within a queer discourse.

Description

When scholar-activist Ruth Wilson Gilmore defines abolition, she says "Abolition requires us to change one thing, which is everything." This course will be a laboratory for projects of any medium that are interested in some form of social-political change, where we can engage and deepen them as a part of that "everything" from an abolitionist perspective of change. From the local to the global, the large to the small, the political to the personal, the economic to the environmental, the prison to the school to the club, from gender and identity constructs to definitions of family, property, rights, justice, nature, freedom and liberation, and things not listed here, we will spend each week looking at one another's projects, help to formulate the research needed to undertake it, and wrestle with how they speak to one another within an abolitionist theory of change. All gender identity and critical race theory is welcome. Students interested in enrolling in this course will need to have a project that is either in-progress or ready to begin working on in order to benefit from it and contribute to it.

Envisioning Urban Commons

Subject Code

APHM

Course Number

420J

School(s)

School of Art

Academic Level

UG - Undergraduate

Credit Hours**Min Credit Hours:**

2

Description

Looking at the current debates and struggles over space, including the role of public and private resources and investment and notions of "the commons" within them (commonly held land, resources, goods, shared and not privatized), this seminar proposes the study of seminal texts that argue for the means of creating commons and subsequent practices of "commoning." While the majority of this literature makes its arguments by interpreting air, water, flora and fauna, as well as cultural achievements or digital technologies as common goods, the texts focus largely on the built environment and how to deal with it commonly, which we will extend to thinking as artists. Authors to be read aloud and discussed will include David Harvey, Silvia Frederici and Stavros Stavrides.

The format of this class is mainly one of a reading group. The aim of the class is not to study as many texts as possible but to concentrate on a few while understanding them thoroughly. The group's findings will be documented in the form of annotations and comments, compiled into a "protocol-PDF," which will be made accessible for further approaches to the concept, individually as well as collectively. The PDF publication include students' photographic contributions as well, relating to how urban commons and subsequent commoning are understood or mediated.

Description

The experiences of those from subjugated populations are as dynamic and richly layered as any other group, however the representations and narratives ascribed to these communities are oftentimes rooted only in suffering. While pain and struggle are critical responses to oppression, joy and leisure are necessary counteractions to

it.

This course will consider amusement, recreation, joy, and leisure as forms of resistance within oppressive social systems. Through lecture, discussion, and field trips, we will work through questions pertaining to free time, relaxation, and escapism-Who is afforded it and at what cost? From art galleries and museums to public pools and national parks, we will examine how gaining access to these spaces and simply enjoying ourselves can be effective in moving toward social equity.

Credit Hours**Min Credit Hours:**

3

Description

"We are the Ones We are Waiting For: Abolition and Spaces of Dissent" is an open form class where we will explore contemporary abolitionist discourse, pandemic and activist media landscapes, and momentary spaces for celebration, daydreaming and dissent. Starting with the changes in space, time and media during today's pandemic, its shutdowns and lockdowns, catastrophe and protests, we will study the new and powerful things that have become possible. Through individual and group research, readings, screenings, and visiting lecturers, we will explore things that have come of this moment in history: its images, its critiques of policing and social control, and new imaginaries and futures that until recently seemed unthinkable. This class will primarily be online; small group meetings will take place where they are possible. Students will be encouraged to find connections between their own artwork and the class materials, but this will not be required. Additional course outcomes will be arrived at during the course through discussion.

Description

This class will look at the photography as a record of perpetual performance and/or arrangement of the body. Specifically, we will explore works that are meant to exist, and/or continue to exist as an image, a referent to the action which is no longer there. We will look at the politics of visibility and the use of the photograph as a form that speaks to accessibility, persistence, and who gets to be visible and therefore remembered. Focusing on contemporary artists from diverse perspectives using the camera as an act of resistance, we will examine the intersection of the self, the body, the camera, and their potential to reclaim narratives and space.

School of Art

Academic Level
UG - Undergraduate

Credit Hours

Min Credit Hours:
3

Description

This course will be devoted to the establishment of an interpretive paradigm (the concept of quasi-objects), and the analysis of a historical moment (3400 Wilshire Boulevard, Los Angeles, 1920-present). The "theory of the quasi-object" is introduced by philosopher Michel Serres in his 1980 book *The Parasite*, and refers to "an astonishing constructor of intersubjectivity." Conveyed with style and great subtlety, Serres' notion is explicated, diagrammed, and refined a decade later by sociologist Bruno Latour, before being taken up in a 2015 essay by architectural theorist Jorge Otero-Pailos, who uses the term to describe "an object necessary for us to organize ourselves socially." We will work through these three short

texts, and think about the way in which philosophical writing is so often reduced to shorthand and instrumentalized by practitioners in the arts.

The Ambassador Hotel opened in 1921, and served as the centerpiece of Los Angeles' glamorous Wilshire Boulevard corridor until 1968, when Senator Robert F. Kennedy was assassinated in its kitchen. Besmirched by the tragedy, the Ambassador was sold in 1971 and endured a state of gradual decline until its closing in 1989. For years, the hotel was the subject of a debate between the Los Angeles Conservancy (which sought to preserve the site) and a succession of groups interested in developing the 24-acre lot that it sat upon. In 2005, the Ambassador was finally demolished in order to make way for the LA Unified School District's Robert Kennedy Schools complex. While it was claimed that the \$600 million complex would incorporate central aspects of the Ambassador's iconic design, what resulted was said to resemble "an odd mixture of progress and guilt." More recently, a group of concerned citizens protested a street artist's mural on the RKS campus, which they found to be racially insensitive. Themes of censorship and "systemic issues of power and trauma" played out in the LA Times and elsewhere.

The goal of this class is to examine the ways in which stories about the Ambassador have been implanted in objects that then exert influence over peoples' ideas, actions, and relationships. We will consider the purpose and methods of preservation in art and architecture, and the capacities of public art. A final assignment will involve the development of a proposal for an artistic intervention at the site.

Description

Everyone wants to be seen but not everyone wants to be photographed. This is a class that aims to investigate that paradox. What are the politics of Seeing and what are the politics of being seen? What exactly is a portrait. Is it a conversation, a collaboration, is it an archive, or a monument. Does it represent or simply identify? Is it our

responsibility to represent the subjects of our photographs with kindness or empathy. What is the role of photographer's gaze. What is the role of the Subject's Gaze. How is power transferred through this process? Through a series of discussions, and art assignments. We will investigate the politics of photographic portraiture from the 1920s-present.

Description

How have artists activated their own bodies and the bodies of others to examine the human condition and society at large? This class explore the ways in which artists use the human body to explore questions of labor, identify, sexuality, etc. through their work. Performative gestures and durational Life/Art works depend on documentation in order to circulate in popular imagination. We will examine the ways that censorship, legal definitions, and the Internet work to make bodies more and less visible, both today and historically. Contemporary societal norms can sometimes respond to art with legal ramifications, which artists should be acutely aware of. This course will address topics such as activism, obscenity, pubic art, and pornography.

Description

While much is made of artistic freedom, the forms into which our efforts flow (sculpture, pictures, performance,) and the containers through which those forms can circulate legibly as artworks (museums, markets, the media,) are rather well-defined. If our ambition is to act effectively and with prominence in the cultural realm, we must present ourselves in a recognizable manner.

These forms and containers are neither fixed nor neutral; they reflect evolving historical, political and economic conditions and concerns. This seminar will examine a number of instances in which the range of acceptable artistic expression was determined or regulated through funding by political (or politically-motivated) actors. By gaining familiarity with these relatively overt instances, participants will develop a sensitivity to the subtler ways in which power guides gesture. Subjects of study will include: the Works Progress Administration's Federal Art Project (1935-1943); the Congress for Cultural Freedom (1950-1966); and the National Endowment for the Arts (1965-present). We will consider the flourishing of corporate involvement in the arts throughout the 1980s, its relation to the economic policies of the Reagan administration, and its influence on post-conceptual art. Mary Jane Jacob's curatorial engagement with the Spoleto Festival (1991; 2000-2008) and Ruangrupa's Documenta 15 (2022) will help us to think about whether settlements of the International art elite can produce (rather than merely model) counter-hegemony. When artists have a realistic conception of the structural constraints under which they labor, they are in a position to succeed professionally while reserving space in their work and their spirit for esoteric meanings.

Description

Visibility & Authority: Images of Asian America is a seminar that examines the politics of portraiture by focusing on the relationship between still and moving images, and constructions

of Asian identity in America. Taking an intersectional and interdisciplinary approach to the subject matter, topics covered include the political, economic, social, and technological forces at play between "East" and "West", and the legacy of these forces embedded in the visual representations of AAPI individuals and communities. In addition to the portrayal of Asians and Asianness in the United States in media, this course highlights the work of artists of Asian descent from the 19th century through present America whose practices engage such topics. Coursework includes significant reading, class discussion, group projects, presentations and research.

Description
In effort to examine and rebuild relationship with the Land, this course will examine personal, social, and institutional relationships to home, site and land and how they intersect in the work of Indigenous makers. It will address our understanding of the taught and erased histories the land holds and its broader identity in relation to ideas of landscape photography. Centering on ideas of Indigenous relationship, reciprocity, and kinship to the land we will interrogate tangible, centered, and embodied experiences centered in lens-based practice.

We will explore these sites of persistence to examine their function as both practical and aesthetic necessities within our cultural space. We will refocus and reframe our ideas to prioritize the land as kin, and as the support which holds us all. We will experience what it means to witness and record all layers of time, past, present, and future, through the lens.

This studio course will examine the characteristics of heroes in classic narratives through close textual analysis of literature, films and comic books. From Hamlet to John Wayne to Spiderwoman, the position of the hero within

the text is sutured into a narrative structure, which supports gender, race and class stereotypes. Illuminated manuscripts, early narrative strips, soap opera and contemporary photo and video narrative strategies will be explored as a counterpoint to heroic narratives.

This is a studio class about what information and indeterminacy, specifically the transparency of the photography to its referent, or not. What happens to an analogical medium when it is reconfigured in the digital age? Is 'digital photography' an invasion of the body snatchers, or is the computer simply another in a long series of technological refinements that marks the evolving condition of photography from its very beginnings? Conversely, is the analogical urge that photography perfects in the west so very secure, or is the attempt to fix the referent in some untampered verisimilitude always frustrated? Maybe Fuzzy Pictures is just a class about making pictures that pose more questions

Perspective, position, locality and margin are spatial terms that form the metaphoric language that maps the ideology of gender difference. Feminist art criticism has concerned itself with identity politics, the construction of the self and theories of the representation of the body. Architectural criticism has analyzed the socially determined and political uses of built environments with less attention to gender theory. A feminist geography could redefine theories of place and explore the labyrinthine spaces where class, race and gender intersect.

This class will read literature from gender theory, feminist art criticism, architectural and landscape theory. Related genres and disciplines such as architectural photography, landscape painting and architecture, land art, real estate development, tourist souvenirs and visions of utopia will be discussed. Interpreting place and home through architectonic, electronic and political boundaries, artists can imagine a radical creative space, which will sustain the subjective. Throughout the class we will return to the question 'Who is seeing and what is being seen?'

The subject of the cultivation of the wilderness will be explored over a two-part investigation of the Landscape with the class The Garden. The notions of the untouched and the natural have changed over centuries of European and Western negotiated relationships to nature. Since at least the sixteenth century, people European origin have regarded nature as separate from human civilization. In cultures with developed urban technologies, nature is the place where dreams of mastery and fantasies of the authentic origins of life flourish. For others the natural world is not a refuge but a place that is a continuation of industrialized civilization. Contemporary art approaches the questions of how we use land to draw on traditions of the past, while being informed by our dependence on nature.

The English word "paradise" comes from an ancient Persian word for garden and from that time the Persians have been know as the creators of the closed gardens of the arid eco-cultures of the middle east. Imported to Europe through Moorish Spain the concept of the walled garden as a trans-dimensional slice out of the world of the imagination transformed over the centuries. The relationship of nature and art is a historically realized into these utopian, privileged and often sacred sites. In the second of a two semester investigation into the Landscape, we will examine the historical models and their relation to contemporary art practices utilize multiple or disrupted points of view in contrast to the paradigm of a universalized and natural. Rehearsed against the backdrop of global politics, environmentalism, or the economics of food distribution, we will look at the garden as a theatrical backdrop that shapes a culturally determined social space.

This is a survey course on photography, film and video works that are linked to historical and

contemporary trends in art, Visual Anthropology, Ethnography, and works of social, political and personal description. Often aggressive in nature, deeply personal or stridently positioned in the social sciences, the works shown will be used to understand the relation of social theory as it is expressed in contemporary work. The class will provide an introduction to shared ideas in art, photography, film and social science. Weekly film/video and photography presentations will be augmented by critical texts, writings by cultural theorists, and artists exploring the facility of image making and its use in describing paradox in life and culture.

Description
Practice Courses within the Photography and Media program focus on making work and developing the shape of students' practices. While each course under this category may offer a particular theme or subject matter, its primary organization and outcomes will center around making. This category will include, but not be limited to, modes of production fundamental to photographic and media-based practice, including film-based and digital photography, video and moving image production, sound production, performance and book-making, and will sometimes include a focus on the primary genres and categories of production common to media and photography.

Photo Idea is a practice series of 3 photo-centric classes consisting of Books, Exhibition and Practice that can be taken in order or one at a time.

Photo Idea: Exhibition is a production course. The idea of this class is to focus on project development through two exhibitions. The first exhibition in November is a "test run" - or following an idea of an exploded notebook of the ideas, images, and resources generated to that point. The second exhibition, in late December, is a focused portion of that work that accurately represents the student's work and ideas.

Part of the presumption of this class is that we work together in critique and idea generating sessions casting a broad net to consider the multiple contextual and exhibition possibilities for a work rooted in contemporary photography or what might be suitably described as essentially a photography reliant idea. In this we honor the interests of artists who are deeply engaged in an ongoing dialogue with the medium and individual avenues of inquiry that have at their base an idea of photographic capacity.

Description
This course is open to Art School BFA2 and above. Also open to students in other schools by permission of instructor. Photo Idea: Critique / R&D is a pre-studio production-based photography project and development course. The goals of this class are to present work in progress and establish research skills while underscoring the importance of experimentation and curiosity. We will work on both production strategies and through critique. The expectation is that a high volume of work will be produced and reviewed quickly. In part, we will examine the expected paths of research to generate unexpected results. Each student in the class will present project ideas and work, participate in brainstorming sessions, and develop specific questions and goals for their work. We will use the unique perspective that each student has to offer in a collaborative think tank process by acting as each other's research assistant. A main goal is to quickly advance each student's project by making work. Students can expect to perform interviews, work with commercial photography labs and develop and present research that

advance project development. Photo Idea: Critique / R&D is part of a practice series of 3 photo-based classes. This series is sequenced as follows Photo Idea: Critique / R&D, Photo Idea: Exhibition, and Photo Idea: Book.

Description
Open to Art School BFA2 and above. This course may be open to students at other year levels, and in other Schools, by Permission of Instructor. This studio course will examine formal and conceptual strategies for combining image and text. In order to contextualize this hybrid

practice, we will look at the use of text in conceptual and political art, narrative paintings, advertising, comics and strip narratives, maps, and illuminated manuscripts. Rather than maintain categorical boundaries between the arts, this course promotes the use of language and image as an important gesture to develop alternative meanings for art and to critically investigate the underlying premises of singularity and monumentality in the institutionalization of art. To read the image as text or conversely to contextualize the image with text or additionally to produce the text as image suggests that the art object can be understood as a cultural text rather than solely as evidence of the personal expression. Students working in all media are encouraged to attend.

Description
Open to the Art School BFA2 and above. This course may be open to students at other year levels, and in other Schools, by Permission of Instructor.

Drawing upon the myths & experiences of family in Western society, this class will take up representations of the family as they inhabit histories of photography and also examine how cultural histories have impacted kin structures. While each of us has our own unique and complex way of defining family, the myths of family often portray non-normative families as dysfunctional. We will explore the framework from which the nuclear concept of family emerged and question the expectations of this structure. We will also examine the convergence of kin relationships over time and the influence of historical events & histories on their configurations. Through the development of independent student projects, research, writing, and discussion, we will ask: What are the implications of these histories on how we navigate the concept and representation of family? During this practice course we will consider works & readings of contemporary artists.

Description

Open to Art School BFA 2 and above.

This course may be open to students at other year levels, and in other Schools, by Permission of Instructor.

Representation of Labor and Work (Reading Group)

The starting point of this course was a critique in fall 2016. Expanding the questions that came up through the work of the participants, the reading group will continue to look at concepts in relation to the representation of labor and work. Once a stable category, labor and its representation have come into a crisis. To understand this crisis, one might look at work carefully, but also read its connections to history, and follow the contemporary and philosophical debates of this struggling and much debated field. We will read and discuss texts in relation to the history of labor, and the notions of a changing "work-scape." The course is open to new students who were not part of the critique in fall.

Description

The Self and Others

The notion of intimacy, the use of the body, and the exploration of the self through various creative contexts has always been a point of return in contemporary art practices. In this class, we focus on the toughest type of observation - the study of our own persona. We turn the camera on ourselves and travel through our psyche, our dreams and our memories to tell and create stories. Whether we use our memories or create a fictional character, we reinvent personal notions of a self-portrait and documentary.

This is an autobiographical class that focuses on the observation of the self as a tool, as a subject, and as a place of inspiration for new work. We will look at and discuss the work of Sophie Calle, Emmett Gowin, Francesca Woodman, Marina Abramovic, Orlan, Jeff Wall, Nan Goldin and others as points of reference, we will also look at how world cultures interpret the idea of "self". Through weekly class assignments, students will engage in various approaches to interpret and project their inner world. Discussions, short readings, films, critiques,

and writing exercises will be pivotal components of the course. Students may work in either film or digital formats.

Description

Photogenic: Performance-for Camera is a course for those interested in exploring liveness, esoteric, narrative dimensions of their work. Throughout the course we'll look at examples of iconic performance documentation, and also look at other sources such as lighting design/light sculpture. We will work on creating individual snapshot and/or moving image narratives. This

work can sit somewhere between functional documentation, tableau-like narrative, or fictional/fantastical (witchy). Reverse it and go for bleakness. We can be grander by collaborating; but a finished project is expected from each participant. This work will be mounted into an exhibition at the end of the semester.

A way of certifying experience, taking photographs is also a way of refusing it - by limiting experience to a search for the photogenic. -Susan Sontag

Description

This course receives credit under Topics in Photo History.

In a time of a resurgent nationalism throughout Western countries, rooted in expressions of racial and ethnic exclusion, this will be a laboratory for projects that take up questions of national identity, the state and globalization - including the manufacture, erasure and recovery of histories and epistemologies (beliefs/knowledge); the drawing and crossing of borders; the construction of identity and critiques of ethnic and racial purity; the freedom of movement, ideas, culture, language and relationship, and how this differs for ordinary people versus capital; and current anti-racist work and coalition building taking place in Los Angeles. Key questions will ask what is the difference between racial and ethnic nationalisms versus the figure of "the nation" as a powerful part of anti-colonial imaginaries? Or how does the dissolution of the nation state posed by globalization both open new possibilities of being while simultaneously further eroding our access to power? To guide our work, we will examine others' works on these ideas, including works by Winona LaDuke, WEB DeBois, Gloria Anzalda, Benedict Anderson, Antibalas, Guillermo Gomez Pena, Jose Munoz, Jessica Hagedorn, Franz Fanon, the Center for Art on Migration Politics (Copenhagen), Jared Sexton, Walter Mignolo, Anibal Quijano, Kidlat Tahimik, Junot Diaz, Vine Deloria, Edwidge Danticat, Emily Jacir, Allan

Sekula, Deborah Bright, Ant Farm, Ricardo Dominguez and Electronic Disturbance Theater, Stuart Hall, Alex Rivera, Paul Gilroy, Edward Said, Arjun Appadurai, Beatriz Santiago Munoz, and anti-deportation activism in the US, from the Sanctuary City movement of the 1980s to the versions offered by cities and universities today. Open to the Institute, BFA and MFA levels.

Academic Level
UG - Undergraduate

Credit Hours

Min Credit Hours:
2

Description
Over the semester students will develop a photo-based project rooted in 1) portraiture and 2) the studio. We will use the dynamics of portraiture to explore the photographer's studio as a site of social, political, aesthetic and material exchange. The class aims to open up historical models of the darkroom and studio toward an expanded idea of medium, time, and community. We will consider the studio as artist's self-portrait, as a place of accidents, and as a site that condenses, frames and sharpens the outside world through each work. Projects should explore the possible limits of the studio, how it is inhabited and permeated, how it is represented in pictures. We will inquire into, to quote Brian O'Doherty, "the relationship between where art is made and where it is displayed." Readings and lectures will open discussions on the personal and critical histories of photographers to their studios, and studio-based exercises and assignments will introduce students to the tools, processes and working methods to explore the medium in a fresh way. Class time will be split between discussion, presentation/critique and workshop, although students will be required to work on their projects on their own time. Critiques will focus on the conceptual, relational and material approaches of each student to their project.

Description
Practice: Photographic Book - Make Your Own Book
Books are vehicles for complex structures of sustained photographic meaning. In this sense, books can provide an antidote to a fragmentary, inattentive and fashion-driven photographic culture. We will consider the difference between series and sequences, the relation between image, text and graphic design. We will look at production issues like paper and binding; as well as book already made. Students will sketch their own book, and make it.

Description
This course is centered around each student's development of a photo-based project on the topic of the "subject in portraiture" or "representation of the body." No pre-concieved project is required at the beginning of the semester, and we will work as a group toward realizing each student's final project. Projects can center on visualizing or constructing the body, depicting or documenting human conditions, for example. Weekly lectures and assigned readings will highlight concepts of subjectivity, objectification, care, responsibility, intimacy and distance. Class time will be split between

lectures, group discussion and presentation/critiques, although students will be required to work on their projects on their own time. Critiques are mandatory and will focus on the conceptual, relational and material approaches of each student to their developing work.

Students should expect to spend approx. \$100.00 on additional course materials and supplies.

Description

"To collect photographs is to collect the world." states Susan Sontag, in her seminal essay *On Photography*. As photographers catalog, collect, appropriate the image from the continuous stream of daily life, they turn the things photographed into other kinds of things - either two dimensional or dematerialized - that can be more conveniently stored and more easily shared. Artists collect objects and ephemera to use in their assemblages, collages, films, writings and drawings. In this class we will look at the history of collectors, collecting and collections and their display both private and public. Because the class will include trips to artist studios, private collections, public museum storage facilities and libraries, it is recommended that class participants leave their schedules open enough to accommodate travel time. All media encouraged and all types of collectors are welcomed to join the class. Class participants will share their collections and invent mechanisms to display the objects of their desires.

Students should expect to spend approx. \$100.00 on additional course materials and supplies.

Description

"[A]nd what I most regretted were my silences," writes Audre Lorde in the essay from which this course borrows its title. Asking what is at stake in our writing, she continues, "[o]f what had I ever been afraid?" Whether we write as ourselves or in a fictional or poetic voice, within the frame of our artworks, alongside them, or outside of them altogether, this course is for writing-where we will write and read, hear our own voices and listen to one another as we cultivate what it is we have to say. From photo captions to poems, from artist statements to memoirs, from journalisms to short fiction, critical essays, mapping or mining the histories and ideas that give our works their meanings, as artists we will confront the fear of writing, of speaking, while thinking about things that stop us from doing so, whether personal or political (or both), and then, DOING. What does it mean for us to do so in these times? What is this transformation? How is writing an action? In Lorde's words, "In the transformation of silence into language and action, it is vitally necessary for each one of us to establish or examine her function in that transformation and to recognize her role as vital within that transformation."

Description

Using the camera as a tool for excavation, we will explore our unique perspectives, memories and experiences in order to situate ourselves in the image making process and the world. Specifically working to explore our relationship to objects, we will look at: what meaning objects hold both subjectively and objectively, how they become important as objects, and their symbolic inscriptions. We will look at how our physical interaction with objects and their arrangement becomes a performative act, along with the site in which they are situated, inspiring and pushing the meaning further. We will explore the cultural/historical connection to objects to further inform our practice and look such histories of the amateur and institutional collection of indigenous artifacts, the long history of still life paintings and photographs, cabinets of curiosities, and Día de los Muertos ofrendas as examples of our long relationship and fascination with objects. Ultimately our photographic exploration will connect and extricate meaning from the things we surround ourselves with (from the mundane to treasures) and how we represent them and ourselves to others.

Description

Considering the relationship of the camera and documentation to live and body-based art, this course presents a critical survey of contemporary sculpture, installation, and performance as understood through its written, photographic, video, and/or audio documentation. We will consider the role of photography and other recorded media within contexts of history, posterity, mythmaking, and the social conditions that determine who (and what) is deemed worthy of being remembered. Students will be required to produce and present a work and/or documentation in response to themes that unfold throughout the semester. Artists we'll consider include: Regina José Galindo, Rafa Esparza, Sebastian Hernandez, William Pope.L, Alvin Baltrop, Elle Perez,

Ja'Tovia Gary, Autumn Knight, Adrian Piper, Sophie Calle, Francis Alys, Ragnar Kjartansson, Jason Moran, Wilmer Wilson IV.

General

Course Long Title

Experimental Documentary

Subject Code	Course Number
APHM	441W

School(s)
School of Art

Academic Level
UG - Undergraduate

Credit Hours

Min Credit Hours:
2

Description

Through readings, screenings and discussion we will explore artists' strategies for engaging truth claims in video. We will look closely at ways experimental documentaries use speculative fiction, embodied practices, gossip, and journalistic techniques to question the

"document". We will examine our ethical relationships to fact checking, "alternative facts", interview strategies, oral histories, and the power dynamics inherent in this field. Stemming from docere which means to teach, documentary practices are tied to pedagogical practices. In this course we will generate expansive relationships not only to the ways pedagogy is housed within experimental documentary work itself, but with the making and learning process in the classroom.

Students in this course will make two short experiments based on assignments, and two completed self-guided works. At least one of the self-guided works must incorporate video as a medium, but interdisciplinary approaches to the question of the document are welcome.

Description

This performance-based class takes on the task of creating and documenting performances that bring private experiences into the public gaze and discourse. Together we survey different tactics available to index ephemeral gestures, bodily experiences, interpersonal relationships, and processes of maintenance and entropy. We explore the political potential of transforming public audiences into coconspirators and the ways artists solicit involvement from viewers & collaborators. Students will workshop performance concepts and experiment with tactics artists have used to encapsulate and circulate performance work through photography, video, text, and narrative. Students will be expected to collaborate with one another for in-class exercises, help document one another's work, and provide critical feedback for in-progress projects. This course will culminate in a final project that will be publicly performed/exhibited.

Description
In effort to examine and rebuild relationship with the Land, this course will examine personal, social, and institutional relationships to home, site and land and how they intersect in the work of Indigenous makers. It will address our understanding of the taught and erased histories the land holds and its broader identity in relation to ideas of landscape photography. Centering on ideas of Indigenous relationship, reciprocity, and kinship to the land we will interrogate tangible, centered, and embodied experiences centered in lens-based practice.

We will explore these sites of persistence to examine their function as both practical and aesthetic necessities within our cultural space. We will refocus and reframe our ideas to prioritize the land as kin, and as the support which holds us all. We will experience what it means to witness and record all layers of time, past, present, and future, through the lens.

Description

Apeshit in the Louvre is a graduate-level reading seminar that looks at theories and histories of exhibitions, museums and galleries, thinking specifically about the agency or power of the artist within them. Starting with ways that artists have incorporated the language and conventions of exhibition into the very form of their work and contemporary protests for the expansion of access, decolonization and social relevance, we will consider how the politics and meanings of galleries, museums and public spaces themselves act upon our works, and how our works, in return, act upon them as a material. Considering histories of the museum, the gallery and biennial, theories of the expanded field, site-specificity, institutional critique, interventionism, performance art, relational and socially-based practices, the "artist as curator," and straight up protest, we'll encounter works by: Emily Jacir, Aruna D'Souza, Amy Longtree, Coco Fusco, Bridget Cooks, Steven Nelson, the Carters (Beyonc and Jay Z), Decolonize Museums, Brian O'Doherty, Avery Gordon, Cameron Roland, Harald Szeeman, Alice Koenitz's Los Angeles Museum of Art (LAMO), the Equal Justice Initiative's Legacy Museum and Memorial for Peace and Justice, Miwon Kwon, Project Row Houses, Hito Steyerl, Tony Bennett, Allan Sekula, Fred Moten and Stefano Harney, Okwui Enwezor, Chantal Mouffe, the Museum of Jurassic Technology, Hans Haacke, and more.

Grad Seminar: Show and Tell

Subject Code	Course Number
APHM	525D

School(s)
School of Art

Academic Level
GR - Graduate

Credit Hours

Min Credit Hours:
3

Description

Open to students in the Art School only.

Since the inception of photography, exhibition

spaces have played an important role for the medium. Photographic exhibitions initially were used to present technical accomplishments and changing parameters of the physical medium, but the effect of these early shows was formative for discourse about "photography." Making first an argument for photography as art, the exhibitions soon developed their "own" set of possibilities.

This seminar will look at the history of exhibitions that included photography such as in propaganda, or early Modernisms, and track how photography as a creative discourse entered the space of the museum. It will look at shows that were mastered by curators with a very specific agenda and discourse in mind, as well as later exhibitions by individual photographers and artists.

The course will be conducted as a seminar, resting on the existing photographic documentation of the exhibitions. Starting with a close reading of the documentary material and the arrangements of the images in space, the seminar will expand towards the ideas, discourses and theoretical placements that were made through and in the exhibitions. The seminar's intention is to help understand contemporary presentation modes of photographic practices and to create a critical reading of them in relation to their predecessors.

Description

Origins, Copies and Strange Creations

This seminar will survey broad-based ideas about originality, narratives of origin, artistic genius, authorship, photographic reproduction of art and reality, natural history, religious and cultish narratives of strange creations.

Narratives of origin in science and the history of culture whether through a trajectory of evolution or de-evolution, lack or abundance,

construct a worldview often called the 'truth'.

The concept 'origin' is a problematic one because an artwork or scholarly work can never be without precedent or understood apart from the historical conditions of its reproduction and reception.

Although cultural theories have debunked ideas like originality, authorship and genius; artist biographies continue to characterize the individual artist as gifted with god-like inspiration. Reproductive technologies have become so widespread that our eventual experience of the "original object" or the idea of the original genome is mediated by prior experiences of them in reproduced forms. Myths and scientific theories of origin, evolution or de-evolution have been used to justify religious fundamentalism, racism, and misogynistic hierarchies.

Students should expect to spend up to \$50 on supplies.

Description

This graduate seminar takes as its subject matter the art of the interview and the interview of the artist. Interviews are both a tool of artists in contextualizing their work and can be the artwork itself. By their nature, they are the realm of discourse and, as such, a place where ideas can be developed and drawn out. This class will start with the history of interview as form and its use in art. For practitioners as diverse as Allen Funt, Studs Terkel, Paul Thek, Dick Cavett, Andy Warhol, Terry Gross, Fischli and Weiss, Hans Ulrich Obrist, Laura Poitras, Frances Stark, and Erroll Morris, the interview has been part information and part performance; a way of delivering texts and a way of undermining them. In the conceptualist era of the late sixties, interviews became a way of unearthing the textual. Magazines like *Avalanche*, co-founded by Willoughby Sharp and Lisa Bear, and Andy Warhol's Interview were efforts to create a new form.

In anthropology, experimental film, and other mediums, the push and pull between disclosure and performance makes the interview one of the more dynamic and compelling ways of challenging the authority of the camera and the hierarchy of speakers and listeners, writers and readers. With this theoretical understanding of the interview in place, we will visit some of LA's most prominent artists in their work space in order to conduct interviews. These interviews will be created and developed by the students in conjunction with the subject, forming a working relationship that will last long after the interview is over. This is an exclusive opportunity to see a variety of artists' studios and get an inside look at their practice as well as developing a new approach to text.

Description

Film on Photography, Photography on Film / Etic and Emic perception

This is a graduate seminar. We will be looking at several films and art works that position either film or photography as a central critical and cultural agent in contemporary conversations about art, politics and/or as an indispensable agent in deciphering the world's condition and our place in it. Weekly readings come from contemporary popular and critical texts as well as from the social sciences. Particularly relevant will be a discussion of etic and emic perception - the theories around the value of an outsider looking in versus an insider describing their position. Beyond this, there is the conversation of the impact of photography and film positioned as an active agent, protagonist or antagonist, in contemporary communication and art. We will take on the conversation of the intended, actual and metaphoric role of the image (both moving and still) as a powerful actor or misleading character. A significant goal will be to develop a sense of our stake and goal as receivers of image information and reviewing our capacities as well as checking some blind spots. Some written responses will be required and a final

presentation by the students that should be based on the various films, works, writings and topics that have been brought up through our work together.

Description

Open to Art School only. This course may be open to students at other year levels, and in other Schools, by Permission of Instructor.

ARTIST AS WRITER explores the usage of the written word to promote ideas, describe concepts, illuminate issues, and for the further development of personal expression. Through the practice of writing, students will incorporate various scripting techniques as well as be presented with elements of narrative creation. The course will introduce students to aspects of writing suitable for print media, digital media, the Internet, and other forms of propaganda. Students will be encouraged to write for impact. Through a series of lectures, conversations, readings, and the practice of writing, students will be presented with a variety of tasks that should result in the enhancement of effective targeted communication. ARTIST AS WRITER will examine the possible effects that the dual role of Artist and Writer can play in local/national/global community of concerned creative people. Students will be required to read selected texts and be expected to write.

Description

Open to Art School only. This course may be open to students at other year levels, and in other Schools, by Permission of Instructor. LA Urbanscape: Image, Words & Acts. This course will explore the interrelation between various social, cultural, economic aspects of daily life in 21st Century Los Angeles as its infrastructure balances atop the physical/political fault lines that point to assured tremors: Freeways, mirages, smog, rumors, invisible populations, celebrity, public surveillance, random

inaccessibility to places, people, and things. The role of the artist in exploring ephemeral acts against the urbanscape's vastness will be investigated via readings, walking tours, as well as through the creation of on-site photographic, written, and performative works.

Description
Open to the Art School only. This course may be open to students at other year levels, and in other Schools, by Permission of Instructor. This course is dedicated to the making of moving pictures: projects whose defining characteristic is that they move and change over time, including video, film, or the animation of still images, performance for the camera, magic lantern shows, or sound works whose moving images are mental. Each student will be expected to bring a project to develop for the semester, and we will develop our curriculum based upon the concerns that arise from students' projects and shared concerns with our mediums, including sound- image relationships, questions of voice, concept and structure, the arcs and rhythms we develop over time, and the differences between installation and screening contexts. As our larger frame, we will say "league" rather than "course," because whether our projects will be individually or collaboratively produced, we will be making them "in league with each other" - screening, watching, listening, supporting, sharing our development and helping one another to build a critical discourse that surrounds or invades our work, while pushing our potential to move an audience. An association, an alliance, "league" comes from the same root that in Latin means "to bind," as a ligament binds muscle to bone. In other words, for the duration of the semester we will be bound in relation - an element of a social practice that we will also inspect as a resource, where the relations built in our production and for our reception will be considered within the space of our work.

Credit Hours

Min Credit Hours:
3

Description
Despite renewed calls for abolition and criticism of "mass incarceration," the USA continues to have the largest prison and jail population in modern history globally. With a cultural imagination that is littered with images of imprisonment, criminality, the thrill of law breaking and the vilification of otherness, we also have a new vocabulary for the racism, classism and heteropatriarchy of criminal justice and punishment. This class will give us a critical introduction to this discourse and how it is spreading around the world through decolonial and anti-racist movements, while studying the ways in which representations of the prison, punishment and liberation inhabit our art historical canons, and how artists have addressed large and abstract systems in their works and communities.

Description
Open to the Art School only. This course may be open to students at other year levels, and in other Schools, by Permission of Instructor. This class will deal with the exhibition of the moving image in space. Structured as an open crit class, this class is for students working with moving images in spaces other than traditional

screening contexts - installations in galleries, public space or within other forms of architecture. In addition to critiquing one another's projects, we will also build an historical awareness of such uses of moving images, along with a contemporary awareness of how different spaces affect the moving image, and how moving images construct space.

Description

Open to the Art School only. This course may be open to students at other year levels, and in other Schools, by Permission of Instructor. Freeway Joyride: 21st Century Lane-Change will explore the intricacies of interconnected communities via the Southern California Freeway system (busiest and most congested freeway system in the nation). The concrete ribbons that tie urban, suburban, rural, desert, mountain, and beach areas will be examined with requisite rest stops at unique and highly public sites that make Los Angeles County an endlessly mythical road that reaches past the horizon while touching the imagination of the world. The role of the artist in exploiting the richness of the global impact of local car culture will be investigated via readings, driving tours, as well as through the creation of on-site photographic, written, and performative works.

Description

Open to the Art School only. This course may be open to students at other year levels, and in other Schools, by Permission of Instructor. Public Persona/Public Spaces will require students to utilize existing public spaces in Los Angeles, San Fernando Valley, and Santa Clarita Valley, to create various narrative and non-linear photo medium-based works that will accentuate the visual presence of the artist across various digital and analog platforms in order to develop an integrated media audience. Aspects pertaining to the generation of a public persona will be discussed and examined in relation to contemporary and historical scholarly/popular references with attention directed at establishing an understanding of how to attract media attention. Public spaces will incorporate established infrastructure, parking lots, streets, and unexpected sites. The course will require some off-campus meetings for photographic purposes. The course will also include lectures and readings pertaining to the concept of public as well as to the variable definition of persona.

Network Culture

The course will examine, analyze, and interpret aspects of individual/group focused attention, mass distraction, the creation/dissemination of concepts/words/products, exponential growth of beliefs/assumptions based on unverifiable text/visual information, and the addictive elements of pop/anti-pop culture. This course

will involve readings from various print and electronic sources. Students will be required to view several films. The course will include the development of publicly disseminated projects that will incorporate concepts included in course lectures, discussions, assigned readings/films. Students will be expected to acquire an appreciation of the interaction between the message, messenger, and the recipient. Students will also be presented with a functional approach to manipulating information to achieve a desired response.

Description
Open to students in the Art School only.

A strongly revisionist way to approach the history of photography is to bring photographic bookmaking into a center stage. Books are vehicles for complex structures of sustained photographic meaning. In this sense, books can provide an antidote to a fragmentary, inattentive and fashion-driven photographic culture. We will consider the difference between series and sequences, the relation between image, text and graphic design, and the authorial roles played by photographer, editor, designer, and writer. Students will produce a sketch for an own book, or possibly produce one.

Description
Sound and Vision: Documenting the Central Valley

This documentary class has a focus on California's Central Valley, culminating in a trip to the area around Bakersfield and a collaborative project involving sound and pictures. Focusing on documentary traditions in both film and photography including ethnographic films and visual anthropology, the class will develop skills in interviewing as well as technical skills for field recording. We will pay particular attention to the intricacies of the human voice and how speech denotes a place. As the trip approaches, students will develop research proposals and contacts. Possible research topics include: the rich history of Bakersfield including its Basque community as well as The Bakersfield Sound, The Cesar Chavez Foundation in La Paz, the Tule River Reservation, ranching and farming enterprises including the Visalia Cattle Auction, the oil and gas industry, among others. Technical demos in using microphones, sound recording devices, sound editing (including an introduction to Pro-tools) and sound mixing will provide the skills for the production of the collaborative final project. Students will need to arrange their own transportation solutions for the trip to and from Bakersfield. The students will contribute approx. \$75 toward gas and are responsible for their own food and transportation.

Description

The recent development in Boyle Heights has provoked heated debates, a series of actions and a large number of public statements and news coverage on the role of art institutions as a generator of gentrification. The positions in the debates went from "art institutions should leave the neighborhood altogether", and the demand to "take a side", to a view of the development as something normal in the history of the neighborhood that has "always changed". But how exactly would one describe and understand the relation of art and gentrification? What is the role of the artist as producer, and as citizen? How have artists worked in the past with this challenge and how did they position themselves? What are complimentary approaches and assessments to describe and understand the current situation while grasping the complexities of the diverse agents in it? What is, for example, the history of Boyle Heights and how does its reading help us to deal with the current situation?

What does it mean to rent, to own, to have property? How do we discuss notions of use value and exchange value in this context? Can we imagine housing to be decommodified; a human right, a common? Is there a chance to break the cycle in which the gentrified are meant to become the gentrifiers?

The course will be organized as a collective inquiry on the housing question in relation to the arts. It will not solely look at the situation of Boyle Heights, but take Boyle Heights as an exemplary case study through which we can read a complex of problems, as well as its histories, and possible alternative futures.

Description

Advanced Topics in Photo History: Photo History in the Field

This class is centered on an engagement with the photography archive of the Tejon Indian Tribe of Southern California. Taking our photo history and archive conversations out into the field, we will have the generous opportunity to engage with members of the Tejon Tribe and work with elements of their archive that need research, appraisal and organization. More than a mere grouping of images from the past, here we will consider the relationship of photographs to the making of history, memory, Identity, authorship and sovereignty. The semester will include both visits to the Tejon Tribal Headquarters in Bakersfield and in-class time on campus at CalArts. Transportation will be arranged for those without cars. Beginning with with historical images that have recently been been

returned from the Smithsonian, First Nations histories of Southern California and the politics of ownership of indigenous materials, we will see where this work takes us, with the possibility of a collaborative project at the end.

Description

This class investigates the possibilities available to artists in Los Angeles using service providers. From printers and framers, to photo-mural installers, to fabricators, foundries, wall-text specialists, and many more, there is a whole industry that has developed in the city to support its artists. Through field trips, interviews, and visiting lectures, we will explore this world of small businesses. Beyond learning of the options these businesses create for artists, students will also learn about the nuts and bolts of starting your own business and about possible jobs they might get in the artistic support industry. A final collaborative project will employ one or more of the businesses we visit.

All classes will take place in the greater Los Angeles. Local travel is required.

Description

This upper level seminar class combines a focus on interviews with a wider picture of what life in the art world entails. The class will feature discussions with international curators, gallery directors, artists, filmmakers, architects, etc. We will also visit production houses in Los Angeles (foundries, labs, etc) and learn how work is produced once an artist leaves the institute and what questions one must ask when executing an exhibition (budgets, agreements, plans, etc). In these discussions, students will learn about the interview format, how to prepare for an interview and research potential subjects, develop skills in talking with people, turning those discussions into a written or recorded text and editing that into a final form.

Description

The course specifically welcomes students to the photography and media program that are not able to join the campus classes in person, have to access the classes from a remote place, or are new to the program. Even though everybody is welcome, a priority is therefore given to new and transfer students. The class will offer an introduction to the photography and media program in the art school. The main element of the class will be a critique in which students will present their work, and the work they are planning to make. Evolving from those presentations and conversations, students will be introduced to the concepts and histories that are relevant in the photo and media program. Part of the class will therefore also consist of the reading and discussion of a few elementary texts. The class will as well problematize the current political and social situation that has an impact on our educational systems, and the way we teach, learn and are able to meet and talk to one another. An important element of the class will therefore be to understand who we are and where we come from, and from which time zone we are entering the conversation. We might also invite guests to the class that help us navigate this specific time.

Description

When scholar-activist Ruth Wilson Gilmore defines abolition, she says "Abolition requires us to change one thing, which is everything." This course will be a laboratory for projects of any medium that are interested in some form of social-political change, where we can engage and deepen them as a part of that "everything" from an abolitionist perspective of change. From the local to the global, the large to the small, the political to the personal, the economic to the environmental, the prison to the school to the club, from gender and identity constructs to definitions of family, property, rights, justice, nature, freedom and liberation, and things not listed here, we will spend each week looking at one another's projects, help to formulate the research needed to undertake it, and wrestle with how they speak to one another within an abolitionist theory of change. All gender identity and critical race theory is welcome. Students interested in enrolling in this course will need to have a project that is either in-progress or ready to begin working on in order to benefit from it and contribute to it.

Academic Level
GR - Graduate

Credit Hours

Min Credit Hours:
2

Description

This advanced digital media course explores the continuum between sound and silence in digital time-based work. Through screenings, listening sessions, readings and guest artist visits, we will think through artists' strategic implementations of silence and its ability to honor the inarticulable, refuse to incriminate, and preserve opacity. We will also listen closely to artists' imperatives to generate sound as they re-articulate historical narratives, resist erasure, and complicate the dynamics of who can be heard. As a class we will think about the limits of a visual frame, and the possibilities that offscreen and onscreen sound can offer. We'll investigate the voice as a medium, strategic use of diegetic and nondiegetic sound, and the history of recorded sound, among other topics. We will begin by learning about the materiality of sound waves and the recording devices that allow us to repeat them. Students will learn technical skills for recording audio, editing audio and video, and spatializing sound in installation. Each student will build their own audio archive to pull from, as well as learn to source from pre-existing archives. Over the course of the semester students will be expected to complete two finished works plus

one short experiment, and participate actively in critique and class discussions.

Description

Think Big is a semester-long course that provides students with large-scale analog printing using traditional darkroom techniques. It is designed to expand students' knowledge and skills in analog photographic printing. The goal of this course is to understand analog image processing beyond the fundamental or introductory level and take the students through the entire process from film processing, test prints making, and producing exhibition quality final prints. Emphasis is placed on building and employing practical darkroom processing techniques, and understanding how to create a better analog workflow from beginning to end. Students will work from their own images in class and should expect to produce one to two large-format silver-gelatin or C41 prints by the end of the course. There is a \$75 course fee, which provides most materials needed to fulfill requirements, however students should be prepared to potentially purchase additional materials if their proposed project requires it. A \$50 lab deposit is also required for use of the lab within and outside of class time.

Description

Theory and Contemporary Issues - Theory and Contemporary Issues courses in the Photography and Media program cover a range of topics that are key to understanding the contemporary debates, histories and movements that shape today's fields of photographic and media-based production. Ranging in structure from seminars to lectures, to production labs, from reading and writing to hybrid models of theory, practice and critique, each course has a theme, problem, idea or a set of questions at its core, around which the course's larger organization will be based.

The construction of racial stereotypes and racism will be examined through readings, class discussion, and analysis of cultural production in a number of disciplines. Oriented to upper-level and graduate students. Open to the Institute.

Envisioning Urban Commons

Subject Code Course Number
APHM 620J

School(s)
School of Art

Academic Level
GR - Graduate

Credit Hours

Min Credit Hours:
2

Description

Looking at the current debates and struggles over space, including the role of public and private resources and investment and notions of "the commons" within them (commonly held land, resources, goods, shared and not privatized), this seminar proposes the study of seminal texts that argue for the means of creating commons and subsequent practices of "commoning." While the majority of this literature makes its arguments by interpreting air, water, flora and fauna, as well as cultural achievements or digital technologies as common goods, the texts focus largely on the built environment and how to deal with it commonly, which we will extend to thinking as artists. Authors to be read aloud and discussed will include David Harvey, Silvia Frederici and Stavros Stavrides.

The format of this class is mainly one of a

reading group. The aim of the class is not to study as many texts as possible but to concentrate on a few while understanding them thoroughly. The group's findings will be documented in the form of annotations and comments, compiled into a "protocol-PDF," which will be made accessible for further approaches to the concept, individually as well as collectively. The PDF publication include students' photographic contributions as well, relating to how urban commons and subsequent commoning are understood or mediated.

Description

The experiences of those from subjugated populations are as dynamic and richly layered as any other group, however the representations and narratives ascribed to these communities are oftentimes rooted only in suffering. While pain and struggle are critical responses to oppression, joy and leisure are necessary counteractions to it.

This course will consider amusement, recreation, joy, and leisure as forms of resistance within oppressive social systems. Through lecture, discussion, and field trips, we will work through questions pertaining to free time, relaxation, and escapism-Who is afforded it and at what cost? From art galleries and museums to public pools and national parks, we will examine how gaining access to these spaces and simply enjoying ourselves can be effective in moving toward social equity.

Description

"We are the Ones We are Waiting For: Abolition and Spaces of Dissent" is an open form class where we will explore contemporary abolitionist discourse, pandemic and activist media landscapes, and momentary spaces for celebration, daydreaming and dissent. Starting with the changes in space, time and media during today's pandemic, its shutdowns and lockdowns, catastrophe and protests, we will study the new and powerful things that have become possible. Through individual and group research, readings, screenings, and visiting lecturers, we will explore things that have come of this moment in history: its images, its critiques of policing and social control, and new imaginaries and futures that until recently seemed unthinkable. This class will primarily be online; small group meetings will take place where they are possible. Students will be encouraged to find connections between their own artwork and the class materials, but this will not be required. Additional course outcomes will be arrived at during the course through discussion.

Description

This class will look at the photography as a record of perpetual performance and/or arrangement of the body. Specifically, we will explore works that are meant to exist, and/or continue to exist as an image, a referent to the action which is no longer there. We will look at the politics of visibility and the use of the photograph as a form that speaks to accessibility, persistence, and who gets to be visible and therefore remembered. Focusing on contemporary artists from diverse perspectives using the camera as an act of

resistance, we will examine the intersection of the self, the body, the camera, and their potential to reclaim narratives and space.

Description

This course will be devoted to the establishment of an interpretive paradigm (the concept of quasi-objects), and the analysis of a historical moment (3400 Wilshire Boulevard, Los Angeles, 1920-present).

The "theory of the quasi-object" is introduced by philosopher Michel Serres in his 1980 book *The Parasite*, and refers to "an astonishing constructor of intersubjectivity." Conveyed with style and great subtlety, Serres' notion is explicated, diagrammed, and refined a decade later by sociologist Bruno Latour, before being taken up in a 2015 essay by architectural theorist Jorge Otero-Pailos, who uses the term to describe "an object necessary for us to organize ourselves socially." We will work through these three short texts, and think about the way in which philosophical writing is so often reduced to shorthand and instrumentalized by practitioners in the arts.

The Ambassador Hotel opened in 1921, and served as the centerpiece of Los Angeles' glamorous Wilshire Boulevard corridor until 1968, when Senator Robert F. Kennedy was assassinated in its kitchen. Besmirched by the tragedy, the Ambassador was sold in 1971 and endured a state of gradual decline until its closing in 1989. For years, the hotel was the subject of a debate between the Los Angeles Conservancy (which sought to preserve the site) and a succession of groups interested in developing the 24-acre lot that it sat upon. In 2005, the Ambassador was finally demolished in order to make way for the LA Unified School District's Robert Kennedy Schools complex. While it was claimed that the \$600 million complex would incorporate central aspects of the Ambassador's iconic design, what resulted was said to resemble "an odd mixture of progress and guilt." More recently, a group of concerned citizens protested a street artist's mural on the RKS campus, which they found to be racially insensitive. Themes of

censorship and "systemic issues of power and trauma" played out in the LA Times and elsewhere.

The goal of this class is to examine the ways in which stories about the Ambassador have been implanted in objects that then exert influence over peoples' ideas, actions, and relationships. We will consider the purpose and methods of preservation in art and architecture, and the capacities of public art. A final assignment will involve the development of a proposal for an artistic intervention at the site.

Description

Everyone wants to be seen but not everyone wants to be photographed. This is a class that aims to investigate that paradox. What are the politics of Seeing and what are the politics of being seen? What exactly is a portrait. Is it a conversation, a collaboration, is it an archive, or a monument. Does it represent or simply identify? Is it our responsibility to represent the subjects of our photographs with kindness or empathy. What is the role of photographer's gaze. What is the role of the Subject's Gaze. How is power transferred through this process? Through a series of discussions, and art assignments. We will investigate the politics of photographic portraiture from the 1920s-present.

Description

How have artists activated their own bodies and the bodies of others to examine the human condition and society at large? This class explore the ways in which artists use the human body to explore questions of labor, identify, sexuality, etc. through their work. Performative gestures and durational Life/Art works depend on documentation in order to circulate in popular imagination. We will examine the ways that censorship, legal definitions, and the Internet work to make bodies more and less visible, both today and historically. Contemporary societal norms can sometimes respond to art with legal ramifications, which artists should be acutely aware of. This course will address topics such as activism, obscenity, pubic art, and pornography.

Description

While much is made of artistic freedom, the forms into which our efforts flow (sculpture, pictures, performance.) and the containers through which those forms can circulate legibly as artworks (museums, markets, the media.) are rather well-defined. If our ambition is to act effectively and with prominence in the cultural realm, we must present ourselves in a recognizable manner. These forms and containers are neither fixed nor neutral; they reflect evolving historical, political and economic conditions and concerns. This seminar will examine a number of instances in which the range of acceptable artistic expression was determined or regulated through funding by political (or politically-motivated) actors. By gaining familiarity with these relatively overt instances, participants will develop a sensitivity to the subtler ways in which power guides gesture. Subjects of study will include: the Works Progress Administration's Federal Art Project (1935-1943); the Congress for Cultural Freedom

(1950-1966); and the National Endowment for the Arts (1965-present). We will consider the flourishing of corporate involvement in the arts throughout the 1980s, its relation to the economic policies of the Reagan administration, and its influence on post-conceptual art. Mary Jane Jacob's curatorial engagement with the Spoleto Festival (1991; 2000-2008) and Ruangrupa's Documenta 15 (2022) will help us to think about whether settlements of the International art elite can produce (rather than merely model) counter-hegemony. When artists have a realistic conception of the structural constraints under which they labor, they are in a position to succeed professionally while reserving space in their work and their spirit for esoteric meanings.

Description
Visibility & Authority: Images of Asian America is a seminar that examines the politics of portraiture by focusing on the relationship between still and moving images, and constructions of Asian identity in America. Taking an intersectional and interdisciplinary approach to the subject matter, topics covered include the political, economic, social, and technological forces at play between "East" and "West", and the legacy of these forces embedded in the visual representations of AAPI individuals and communities. In addition to the portrayal of Asians and Asianness in the United States in media, this course highlights the work of artists of Asian descent from the 19th century through present America whose practices engage such topics. Coursework includes significant reading, class discussion, group projects, presentations and research.

Description
In effort to examine and rebuild relationship with the Land, this course will examine personal, social, and institutional relationships to home, site and land and how they intersect in the work of Indigenous makers. It will address our understanding of the taught and erased histories the land holds and its broader identity in relation to ideas of landscape photography. Centering on ideas of Indigenous relationship, reciprocity, and kinship to the land we will interrogate tangible, centered, and embodied experiences centered in lens-based practice.

We will explore these sites of persistence to examine their function as both practical and aesthetic necessities within our cultural space. We will refocus and reframe our ideas to prioritize the land as kin, and as the support which holds us all. We will experience what it means to witness and record all layers of time, past, present, and future, through the lens.

Description
Open to Art School only. This course may be open to students at other year levels, and in other Schools, by Permission of Instructor. Practice Courses within the Photography and Media program focus on making work and developing the shape of students' practices. While each course under this category may offer a particular theme or subject matter, its primary organization and outcomes will center around making. This category will include, but not be limited to, modes of production fundamental to photographic and

media-based practice, including film-based and digital photography, video and moving image production, sound production, performance and book-making, and will sometimes include a focus on the primary genres and categories of production common to media and photography.

This studio course will examine the characteristics of heroes in classic narratives through close textual analysis of literature, films and comic books. From Hamlet to John Wayne to Spiderwoman, the position of the hero within the text is sutured into a narrative structure, which supports gender, race and class stereotypes. Illuminated manuscripts, early narrative strips, soap opera and contemporary photo and video narrative strategies will be explored as a counterpoint to heroic narratives.

This is a studio class about what information and indeterminacy, specifically the transparency of the photography to its referent, or not. What happens to an analogical medium when it is reconfigured in the digital age? Is 'digital photography' an invasion of the body snatchers, or is the computer simply another in a long series of technological refinements that marks

the evolving condition of photography from its very beginnings? Conversely, is the analogical urge that photography perfects in the west so very secure, or is the attempt to fix the referent in some untampered verisimilitude always frustrated? Maybe Fuzzy Pictures is just a class about making pictures that pose more questions rather than answers-fuzzy ones, warm and fuzzy ones, or maybe just presbyopic ones. Bring your glasses. There will be a show.

Description

Open to Art School only. This course may be open to students at other year levels, and in other Schools, by Permission of Instructor.

Practice Courses within the Photography and Media program focus on making work and developing the shape of students' practices. While each course under this category may offer a particular theme or subject matter, its primary organization and outcomes will center around making. This category will include, but not be limited to, modes of production fundamental to photographic and media-based practice, including film-based and digital photography, video and moving image production, sound production, performance and book-making, and will sometimes include a focus on the primary genres and categories of production common to media and photography.

Perspective, position, locality and margin are spatial terms that form the metaphoric language that maps the ideology of gender difference. Feminist art criticism has concerned itself with identity politics, the construction of the self and theories of the representation of the body. Architectural criticism has analyzed the socially determined and political uses of built environments with less attention to gender theory.

A feminist geography could redefine theories of place and explore the labyrinthine spaces where class, race and gender intersect.

This class will read literature from gender theory, feminist art criticism, architectural and landscape theory. Related genres and disciplines such as architectural photography, landscape painting and architecture, land art, real estate development, tourist souvenirs and visions of utopia will be discussed. Interpreting place and home through architectonic, electronic and political boundaries, artists can imagine a radical creative space, which will sustain the subjective. Throughout the class we will return to the question 'Who is seeing and what is being seen?'

The subject of the cultivation of the wilderness will be explored over a two-part investigation of the Landscape with the class The Garden. The notions of the untouched and the natural have changed over centuries of European and Western negotiated relationships to nature. Since at least the sixteenth century, people European origin have regarded nature as separate from human civilization. In cultures with developed urban technologies, nature is the place where dreams of mastery and fantasies of the authentic origins of life flourish. For others the natural world is not a refuge but a place that is a continuation of industrialized civilization. Contemporary art approaches the questions of how we use land to draw on traditions of the past, while being informed by our dependence on nature.

The English word "paradise" comes from an ancient Persian word for garden and from that time the Persians have been know as the creators of the closed gardens of the arid eco-cultures of the middle east. Imported to Europe through Moorish Spain the concept of the walled garden as a trans-dimensional slice out of the world of the imagination transformed over the centuries. The relationship of nature and art is a historically realized into these utopian, privileged and often sacred sites. In the second of a two semester investigation into the Landscape, we will examine the historical models and their relation to contemporary art practices utilize multiple or disrupted points of view in contrast to the paradigm of a universalized and natural. Rehearsed against the backdrop of global politics, environmentalism, or the economics of food distribution, we will look at the garden as a theatrical backdrop that shapes a culturally determined social space.

Photo Idea is a practice series of 3 photo-centric classes consisting of Books, Exhibition and Practice that can be taken in order or one at a time.

Photo Idea: Exhibition is a production course. The idea of this class is to focus on project development through two exhibitions. The first exhibition in November is a "test run" - or following an idea of an exploded notebook of the ideas, images, and resources generated to that point. The second exhibition, in late December, is a focused portion of that work that accurately represents the student's work and ideas.

Part of the presumption of this class is that we work together in critique and idea generating sessions casting a broad net to consider the multiple contextual and exhibition possibilities for a work rooted in contemporary photography or what might be suitably described as essentially a photography reliant idea. In this we honor the interests of artists who are deeply engaged in an ongoing dialogue with the medium and individual avenues of inquiry that have at their base an idea of photographic capacity.

Description

This course is open to Art School BFA2 and above. Also open to students in other schools by permission of instructor. Photo Idea: Critique / R&D is a pre-studio production-based photography project and development course. The goals of this class are to present work in progress and establish research skills while underscoring the importance of experimentation and curiosity. We will work on both production strategies and through critique. The expectation is that a high volume of work will be produced and reviewed

quickly. In part, we will examine the expected paths of research to generate unexpected results. Each student in the class will present project ideas and work, participate in brainstorming sessions, and develop specific questions and goals for their work. We will use the unique perspective that each student has to offer in a collaborative think tank process by acting as each other's research assistant. A main goal is to quickly advance each student's project by making work. Students can expect to perform interviews, work with commercial photography labs and develop and present research that advance project development. Photo Idea: Critique / R&D is part of a practice series of 3 photo-based classes. This series is sequenced as follows Photo Idea: Critique / R&D, Photo Idea: Exhibition, and Photo Idea: Book.

Description
Open to the Art School only. This course may be open to students at other year levels, and in other Schools, by Permission of Instructor. This studio course will examine formal and conceptual strategies for combining image and text. In order to contextualize this hybrid practice, we will look at the use of text in conceptual and political art, narrative paintings, advertising, comics and strip narratives, maps, and illuminated manuscripts. Rather than maintain categorical boundaries between the arts, this course promotes the use of language and image as an important gesture to develop alternative meanings for art and to critically investigate the underlying premises of singularity and monumentality in the institutionalization of art. To read the image as text or conversely to contextualize the image with text or additionally to produce the text as image suggests that the art object can be understood as a cultural text rather than solely as evidence of the personal expression. Students working in all media are encouraged to attend.

Drawing upon the myths & experiences of family in Western society, this class will take up representations of the family as they inhabit histories of photography and also examine how cultural histories have impacted kin structures. While each of us has our own unique and complex way of defining family, the myths of family often

portray non-normative families as dysfunctional. We will explore the framework from which the nuclear concept of family emerged and question the expectations of this structure. We will also examine the convergence of kin relationships over time and the influence of historical events & histories on their configurations. Through the development of independent student projects, research, writing, and discussion, we will ask: What are the implications of these histories on how we navigate the concept and representation of family? During this practice course we will consider works & readings of contemporary artists.

Description

Open to Art School BFA 2 and above.

This course may be open to students at other year levels, and in other Schools, by Permission of Instructor.

Representation of Labor and Work (Reading Group)

The starting point of this course was a critique in fall 2016. Expanding the questions that came up through the work of the participants, the reading group will continue to look at concepts in relation to the representation of labor and work. Once a stable category, labor and its representation have come into a crisis. To understand this crisis, one might look at work carefully, but also read its connections to history, and follow the contemporary and philosophical debates of this struggling and much debated field. We will read and discuss texts in relation to the history of labor, and the notions of a changing "work-scape." The course is open to new students who were not part of the critique in fall.

Description

Practice Courses within the Photography and Media program focus on making work and developing the shape of students' practices. While each course under this category may offer a particular theme or subject matter, its primary organization and outcomes will center around making. This category will include, but not be limited to, modes of production fundamental to photographic and media-based practice, including film-based and digital photography, video and moving image production, sound production, performance and book-making, and will sometimes include a focus on the primary genres and categories of production common to media and photography.

Description

The Self and Others

The notion of intimacy, the use of the body, and the exploration of the self through various creative contexts has always been a point of return in contemporary art practices. In this class, we focus on the toughest type of observation - the study of our own persona. We turn the camera on ourselves and travel through our psyche, our dreams and our memories to tell and create stories. Whether we use our memories or create a fictional character, we reinvent personal notions of a self-portrait and documentary.

This is an autobiographical class that focuses on the observation of the self as a tool, as a subject, and as a place of inspiration for new work. We will look at and discuss the work of Sophie Calle, Emmett Gowin, Francesca Woodman, Marina Abramovic, Orlan, Jeff Wall, Nan Goldin and others as points of reference, we will also look at how world cultures interpret the idea of "self". Through weekly class assignments, students will engage in various approaches to interpret and project their inner world. Discussions, short readings, films, critiques, and writing exercises will be pivotal components of the course. Students may work in either film or digital formats.

Description

Broken Windows is an observation of contemporary shifts, regressions and transformations in photographic representation at this moment. Concerns over technological change and ubiquity in photography has aided in a perspectival transition from more conventionally figurative and representative practices of the last 40 years, to arguably more Neo, Neo-Pictorialist modes of representation and abstraction.

Description

Photogenic: Performance-for Camera is a course for those interested in exploring liveness, esoteric, narrative dimensions of their work. Throughout the course we'll look at examples of iconic performance documentation, and also look at other sources such as lighting design/light sculpture. We will work on creating individual snapshot and/or moving image narratives. This work can sit somewhere between functional documentation, tableau-like narrative, or fictional/fantastical (witchy). Reverse it and go for bleakness. We can be grander by collaborating; but a finished project is expected from each participant. This work will be mounted into an exhibition at the end of the semester.

A way of certifying experience, taking photographs is also a way of refusing it - by limiting experience to a search for the photogenic. -Susan Sontag

Description
In a time of a resurgent nationalism throughout Western countries, rooted in expressions of racial and ethnic exclusion, this will be a laboratory for projects that take up questions of national identity, the state and globalization - including the manufacture, erasure and recovery of histories and epistemologies (beliefs/knowledge); the drawing and crossing of borders; the construction of identity and critiques of ethnic and racial purity; the freedom of movement, ideas, culture, language and relationship, and how this differs for ordinary people versus capital; and current anti-racist work and coalition building taking place in Los Angeles. Key questions will ask what is the difference between racial and ethnic nationalisms versus the figure of "the nation" as a powerful part of anti-colonial imaginaries? Or how does the dissolution of the nation state posed by globalization both open new possibilities of being while simultaneously further eroding our access to power? To guide our work, we will examine others' works on these ideas, including works by Winona LaDuke, WEB DeBois, Gloria Anzalda, Benedict Anderson, Antibalas, Guillermo Gomez Pena, Jose Munoz, Jessica Hagedorn, Franz Fanon, the Center for Art on Migration Politics (Copenhagen), Jared Sexton, Walter Mignolo, Anibal Quijano, Kidlat Tahimik, Junot Diaz, Vine Deloria, Edwidge Danticat, Emily Jacir, Allan Sekula, Deborah Bright, Ant Farm, Ricardo Dominguez and Electronic Disturbance Theater, Stuart Hall, Alex Rivera, Paul Gilroy, Edward Said, Arjun Appadurai, Beatriz Santiago Munoz, and anti-deportation activism in the US, from the Sanctuary City movement of the 1980s to the versions offered by cities and universities today. Open to the Institute, BFA and MFA levels.

Academic Level
GR - Graduate

Credit Hours

Min Credit Hours:
2

Description
Over the semester students will develop a photo-based project rooted in 1) portraiture and 2) the studio. We will use the dynamics of portraiture to explore the photographer's studio as a site of social, political, aesthetic and material exchange. The class aims to open up historical models of the darkroom and studio toward an expanded idea of medium, time, and community. We will consider the studio as artist's self-portrait, as a place of accidents, and as a site that condenses, frames and sharpens the outside world through each work. Projects should explore the possible limits of the studio, how it is inhabited and permeated, how it is represented in pictures. We will inquire into, to quote Brian O'Doherty, "the relationship between where art is made and where it is displayed." Readings and lectures will open discussions on the personal and critical histories of photographers to their studios, and studio-based exercises and assignments will introduce students to the tools, processes and working methods to explore the medium in a fresh way. Class time will be split between discussion, presentation/critique and workshop, although students will be required to work on their projects on their own time. Critiques will focus on the conceptual, relational and material approaches of each student to their project.

Description

Practice: Photographic Book - Make Your Own Book

Books are vehicles for complex structures of sustained photographic meaning. In this sense, books can provide an antidote to a fragmentary, inattentive and fashion-driven photographic culture. We will consider the difference between series and sequences, the relation between image, text and graphic design. We will look at production issues like paper and binding; as well as book already made. Students will sketch their own book, and make it.

Min Credit Hours:

2

Description

"To collect photographs is to collect the world." states Susan Sontag, in her seminal essay On Photography. As photographers catalog, collect, appropriate the image from the continuous stream of daily life, they turn the things photographed into other kinds of things - either two dimensional or dematerialized - that can be more conveniently stored and more easily shared. Artists collect objects and ephemera to use in their assemblages, collages, films, writings and drawings. In this class we will look at the history of collectors, collecting and collections and their display both private and public. Because the class will include trips to artist studios, private collections, public museum storage facilities and libraries, it is recommended that class participants leave their schedules open enough to accommodate travel time. All media encouraged and all types of collectors are welcomed to join the class. Class participants will share their collections and invent mechanisms to display the objects of their desires.

Students should expect to spend approx. \$100.00 on additional course materials and supplies.

Description

"[A]nd what I most regretted were my silences," writes Audre Lorde in the essay from which this course borrows its title. Asking what is at stake in our writing, she continues, "[o]f what had I ever been afraid?" Whether we write as ourselves or in a fictional or poetic voice, within the frame of our artworks, alongside them, or outside of them altogether, this course is for writing-where we will write and read, hear our own voices and listen to one another as we cultivate what it is we have to say. From photo captions to poems, from artist statements to memoirs, from journalisms to short fiction, critical essays, mapping or mining the histories and ideas that give our works their meanings, as artists we will confront the fear of writing, of speaking, while thinking about things that stop us from doing so, whether personal or political (or both), and then, DOING. What does it mean for us to do so in these times? What is this transformation? How is writing an action? In Lorde's words, "In the transformation of silence into language and action, it is vitally necessary for each one of us to establish or examine her function in that transformation and to recognize her role as vital within that transformation."

Description

Using the camera as a tool for excavation, we will explore our unique perspectives, memories and experiences in order to situate ourselves in the image making process and the world. Specifically working to explore our relationship to objects, we will look at: what meaning objects hold both subjectively and objectively, how they become important as objects, and their symbolic inscriptions. We will look at how our physical interaction with objects and their arrangement becomes a performative act, along with the site in which they are situated, inspiring and pushing the meaning further. We will explore the cultural/historical connection to objects to further inform our practice and look such histories of the amateur and institutional collection of indigenous artifacts, the long history of still life paintings and photographs, cabinets of curiosities, and Día de los Muertos ofrendas as examples of our long relationship and fascination with objects. Ultimately our photographic exploration will connect and extricate meaning from the things we surround ourselves with (from the mundane to treasures) and how we represent them and ourselves to others.

Description

Through readings, screenings and discussion we will explore artists' strategies for engaging truth claims in video. We will look closely at ways experimental documentaries use speculative fiction, embodied practices, gossip, and journalistic techniques to question the "document". We will examine our ethical relationships to fact checking, "alternative facts", interview strategies, oral histories, and the power dynamics inherent in this field. Stemming from docere which means to teach, documentary practices are tied to pedagogical practices. In this course we will generate expansive relationships not only to the ways pedagogy is housed within experimental documentary work itself, but with the making and learning process in the classroom.

Students in this course will make two short experiments based on assignments, and two completed self-guided works. At least one of the self-guided works must incorporate video as a medium, but interdisciplinary approaches to the question of the document are welcome.

This performance-based class takes on the task of creating and documenting performances that bring private experiences into the public gaze and discourse. Together we survey different tactics available to index ephemeral gestures, bodily experiences, interpersonal relationships, and processes of maintenance and entropy. We explore the political potential of transforming public audiences into coconspirators and the ways artists solicit involvement from viewers & collaborators. Students will workshop performance concepts and experiment with tactics artists have used to encapsulate and circulate performance work through photography, video, text, and narrative. Students will be expected to collaborate with one another for in-class exercises, help document one another's work, and provide critical feedback for in-progress projects. This course will culminate in a final project that will be publicly performed/exhibited.

This workshop provides an introduction to traditional chemical analog color photography work. Covering negative film exposure and darkroom printing. The class uses the the color darkroom facilities in the Photography Lab and the 50 inch color paper processor. There is a \$50.00 course fee which provides the class with some basic

materials, however students should be prepared to potentially purchase additional materials if their proposed project requires it.
Attendance at all sessions is required.

Description

The APHM001 Series is comprised of workshops that introduce students to the technologies, techniques and processes that are fundamental to photography and media-based practice. Topics are designed to provide the skill and know how that students require to get from their concept to its realization, including camera techniques, lighting, printing, moving image and sound production and post-production, multi-media applications, and workflows for analog and digital production.

This workshop will focus on Adobe InDesign for the assembling of artist's books. In getting one's work from a set of images and written text to the completed layout of a publication and then to its printing, students will be walked through each step so as to retain the most creativity and control over their pages from beginning to end. In addition to InDesign, the course will cover basics of typography and how to take your final layout into different methods for printing. Enrollment priority will be given to students of the Photography and Media program.

Description

The goal of Lighting Lab is help students to choose light sources based upon their creative needs, considering how the technical side of photography is also creative, whether in a fine art context or in other professional settings. It introduces students to different lighting sources such as strobes, off-camera flash, LED, available light, and lighting modifiers that can bring nuance to each source. It will cover syncing between these sources and your camera, and how to choose the ideal light source for a shoot. If time allows, some DIY solutions to improvise in a pinch during a shoot when the proper equipment is not readily available.

Description

Digital Photography's Game-Changer - High Dynamic Range (HDR) Photographic Technique:

Advanced workshop teaching the HDR system for students with a solid grasp of digital photography. Here we will explore how High Dynamic Range extends the boundaries of digital photography to produce image quality not seen in the past. Students are required to bring DSLR, tripod, computer (or access outside of class) with image editing software (preferably AdobeCS & Bridge). HDR software Photomatix will be provided for download to students by HDRsoft corp. A group show of students work at coarse end would be highly recommended.

Course coverage: Cameras, file types, bit depth and sensor size; Exposing for HDR imagery; Bracketing; Pre-blending choices in Lightroom or AdobeBridge; Photomatix blending software & tonemapping, "de-ghosting" and chromatic aberrations; Working with RAW format images; Curves, posterization and the histogram; Advanced blending using masks; Final HDR editing in Photoshop environment; Alternative HDR uses and converting the HDR image to B&W.

Description

This workshop will focus on the manual elements of book binding. Students will be able to utilize the CalArts print lab and the resources it has to offer. Students can expect to learn how to fold and sew signatures of a book, saddle stitch with staples, and perfect bind. Students will also be able to explore different methods of bookmaking, such as stab binding and coptic binding through smaller demos and exercises depending on interest. The workshop will introduce basic elements of binding at the beginning of the semester as well as help student's make their own projects at the

end of the semester. The workshop will meet every other week (7 total meetings) throughout the semester.

Description
This workshop will approach exhibition design from the perspective of the post-COVID art world. We will look at the various ways exhibitions are designed for both museums and galleries as well as in the virtual spaces that pre-existed COVID but have since exploded into new virtual venues and tools. We will look at both the history of exhibition design as well as the strategies and methodologies artists, curators and architects have developed in the face of the opportunities and constraints provided by the situation. Students will use softwares and technical skills they will need, as well as the conceptual skills required for successful exhibition design. As a final project, students will design their own exhibition using SketchUp or Art Steps, or in a physical model.

Description

How does one, how does an artist script a self? We will know ourselves and know what we think when we find the words. This workshop will serve as a testing ground for each of us to try out modes, voices, rhythms, structures, and approaches that enable us to articulate some sentiment in writing and capture a vision. We will read and discuss models, trying our hand at different forms, from the personal and diaristic to the exhibition review, artist statement, press release, contributor's note, and blurb. Writing is thought in action, as it's happening, often labored and slow but also fleet and high as a kite. It needn't look any certain way because thoughts can look any which way, it need only function for your meanings.

"Man does not exist prior to language, either as a species or as an individual."

-Roland Barthes

Description

Revelators, Akousmatikoi - Sound in Art, Music, and Ritual is an Art and Technology course focused on artists' use of sound in the creation of performance, recording, and immersive environments. Additionally, the course examines the history and theory of sound in art, ritual, and popular/experimental music through lectures, listening sessions, and screenings. This studio/lecture hybrid splits class time between lectures and the demonstration/employment of digital, AI, and analog methods for producing, installing, performing, and distributing sound across platforms. Participants will create single or multichannel sound works with an emphasis on experimental practice. In 1930, Blind Willie Johnson recorded the gospel blues classic "John the Revelator" for Columbia Records. Its haunting call-and-response vocals signal its origins in the "field songs" of enslaved people and the "spirituals" - syntheses of Ifa and Orisha religious rites, encoded messages of protest, and Christian religion - that informed modern gospel music. Its subject, John of Padmos, prophet of the Book of Revelation, vividly described the "loosing of the seven seals" that would unleash Apocalypse. Such "Revelators" have existed throughout human history-speaking, writing, illustration, and sometimes ranting their visions and prophecies-prefiguring the work of many contemporary visual, sound, and performance artists. Millenia earlier, at the birth of music as "organized sound", the Pythagorean cult splintered into Mathematikoi, forebears of positivist science, an Akousmatikoi (listeners), forebears of the arts - especially the sonict arts-who approached the Apeiron (infinite) by way of sound, art, and ritual. Optional readings include excerpts from Amiri Baraka's Blues People, Iqbal and Pendergrass's Realism in Messaien Birdsong, Roberta Brown's Xenakis on Xenakis, Brandon LaBelle's Other: Maryann Amacher, Kodwo Eshun's More Brilliant than the Sun, Adrian Piper's Notes on Funk, Mike Kelley's Cross-Gender, Cross-Genre, Sean Albiez's Postsoul Futurama, African American cultural politics and early Detroit techno, and Fred Moten's Taste Dissonance Flavor Escape (Preface to a Solo by Miles Davis).

Description
A course in discussing and developing artistic ideas and projects in relation to Hacktivism and exploring Rebellion as a framework for art. This class will discuss optimistic futuring, imagining creative solutions for the world's problems using art, data, imagination, and creative brainstorming in acts of rebellion as art or action and how to theoretically bring these ideas to life.

We'll examine nascent movements, ideas and cultures and their aesthetics and functionality in art to image a post-capitalist world and reconnection to nature and a recontextualization of technology.
This class will have students create ideas and works embodying these values and thematics, both as individuals and as groups.

Subject Code	Course Number
ATEK	435
School(s)	Program(s)
School of Art	Art and Tech

Academic Level

UG - Undergraduate

Credit Hours

Min Credit Hours:

3

Description

There is a long history of algorithmic processes in art. We will approach our study through the history of Fluxus and conceptual art, as well as trace the lineage of generative art methods. In addition, there will be a focus on using rules, chance, scripts and scores to understand computers as performers. Using both analog and digital means to communicate and visualize ideas, students will begin to find new ways of implementing algorithms in their individual art practice. In the process of critically rethinking our relationship to algorithms, we will examine how we can engage with computation by repurposing these algorithmic processes in creative ways. Designed for the student with no programming experience, this course will require both analog and digital experimentation. We will be making work throughout the semester with the computer as a collaborator and executor.

Subject Code	Course Number
ATEK	439
School(s)	Program(s)
School of Art	Art and Tech

Academic Level

UG - Undergraduate

Credit Hours

Min Credit Hours:

3

Description

Pandaemonium Architecture was introduced in the 1958 Mechanisation of Thought Processes symposium as an early pattern recognition model for AI. Named after the demon-inhabited city in Milton's Paradise Lost, the Pandaemonium Architecture assemblage employs 'demons' -bits of information or code- which 'scream' in order to ascend a hierarchy of algorithmic hurtles. Artificial Intelligence and Machine Learning can be applied to any digital artistic medium, including video, sound, text, still images, and 3d modeling and printing. Further, AI and ML can be trained on almost any digital information, making it a powerful tool in the artist's arsenal. Diffusion Models and Generative Adversarial Nets combine predictive, generative, and adversarial operations and function as rapidly iterated critique, analogous to hyperspeed natural selection, quickly evolving their objects to high levels of complexity. LLM's employ large databases to generate texts, power chatbots, and even write code. Predictive Analytics employs game theory, statistical analysis, data analysis, scenario planning, and Modeling and Simulation to create accurate predictive models for different aspects of the future. Social Engineering operates on individuals and masses to "create" this future. These are the tools of technocracy. Artists should examine them and consider picking them up as well. Participants will explore the theory and history of AI and employ AI and ML, including local, server-side, and online AI's, as well as generative apps to make art. Labs will demonstrate the use of tools and resources to research and create AI and ML-based artworks and will allow time for participants to focus on individual or group Final Projects. Computer literacy, conceptual skills, and basic coding skills are required. Advanced coding will not be necessary but advanced coders are encouraged to participate.

Description

At the peak of the Dutch Tulip mania of 1637, a single bulb cost more than 10 times the yearly wages of a skilled artisan; in Extraordinary Popular Delusions and the Madness of Crowds, Charles Mackay writes that 12 acres of land were offered in exchange for a single Semper Augustus bulb- Tulipmania prefigured the hyper-financialization of art and aesthetics in the 21st Century.

In her 1917 New York Sun review of the Independents Show, Jane Dixon writes: " The artist calls It 'Tulips Hysteria Coordinating.Anyone who can think up a name like that ought to be put on exhibition along with the 'painting.'" Dixon, admitting her mystification, describes a cubist work comprised of splotches of paint little resembling tulips. Even more mystifying, the work

-by Marcel Duchamp- appears to have never existed. There is no mention of it in the show's catalog, no mention by Duchamp, and scarcely a mention by biographers and historians. Loosed from the necessity of actuality, the work is one of Duchamp's most radical, with the viral power of a media-amplified "Popular Delusion" not unlike the Tulip Hysteria of its title.

From the caves at Lascaux to medieval Scriptoria to the spires of the Gothic cathedrals, the drawings of Leonardo and Kepler to the automatons commissioned for the courts of Rudolf II and Catherine the Great; from the discovery of the binary in the hexagrams of the I Ching to Leibniz' Calculus Ratiocinator to Ada Lovelace's algorithm, Goethe's Faust, and Mary Shelley's Frankenstein, the course explores the technological imaginary that gave rise to modernity.

From Daguerreotypomania to Impressionism, Wagner's Gesamkunstwerk to Brecht's Epic Theatre, the technophilia of the Futurists to the utopianism of Tatlin's tower; from the machinic works of Roussel and Duchamp to those of Nam June Paik, Lynn Herschman-Leeson, Rammellzee, and the CCRU; from Donna Haraway's Cyborg Manifesto to Paul Preciado's Pharmacopornographic Era, from the techno-cultural work of Pierre Huyghe and the Otolith Group to the bio-sculpture of Anicka Yi; from early web-based art to the blockchain and NFTs, the course explores the ways in which artists have imagined and concretized modernity.

With the rise (and financialization) of digitally and technologically-entangled art and the ever-intensifying effect of technoscience upon the social and natural world, the question concerning artists' relationship to technology becomes more urgent than ever. Tulip Hysteria Coordinating explores artists' interactions with and approaches to technology from 4 million BCE to the present, examining their increasing complexity.

Description
This is a required class for the Integrated Media MFA1 students. In this class we will review the use of technology as a means for creating and understanding multidisciplinary art practices in the 21st Century. Through the use of interactive lectures we will examine visual, sound and performance work with visiting artists currently working at the intersections of cross-disciplinary art and technologies.

Description

Permission of Instructor only.

Independent Study is a semester-long agreement developed between a student and a faculty member to discuss ongoing work, a particular project, or a course of study.

This agreement, including frequency of meetings and unit value, will be drawn up on an Independent Study Contract.

The Independent Study contract is available beginning two weeks prior to the start of the Fall and Spring term. Independent Studies are not available in the Summer or Winter sessions.

Once submitted, your request will be reviewed and if approved, will be added to your schedule by the Registrar. The contract can be found by clicking "<https://calarts.formstack.com/forms/is>">Here

Description

This is a required class for the Art and Technology MFA2 students. Studio/Critique is framed by an experimental, interdisciplinary and non-traditional approach to art-making while employing various combinations of digital and electronic media (sound and image), interactivity (social, relational or technical), hybridity, immersion (physical or virtual), network strategies and live performance. This approach will frame the context for the critique as we compare and contrast the artist's work with their intent and motivation. The cultural, social and political issues that arise from the artist's work will also be part of the discussions. Various critical methods will be employed throughout the class that allow for the most

appropriate format for enabling discussion and critical analysis. The purpose of the class is to enable the artist to experience various interpretations found in the body of work.

Description

There is a long history of algorithmic processes in art. We will approach our study through the history of Fluxus and conceptual art, as well as trace the lineage of generative art methods. In addition, there will be a focus on using rules, chance, scripts and scores to understand computers as performers. Using both analog and digital means to communicate and visualize ideas, students will begin to find new ways of implementing algorithms in their individual art practice. In the process of critically rethinking our relationship to algorithms, we will examine how we can engage with computation by repurposing these algorithmic processes in creative ways. Designed for the student with no programming experience, this course will require both analog and digital experimentation. We will be making work throughout the semester with the computer as a collaborator and executor.

Description

Pandaemonium Architecture was introduced in the 1958 Mechanisation of Thought Processes symposium as an early pattern recognition model for AI. Named after the demon-inhabited city in Milton's Paradise Lost, the Pandaemonium Architecture assemblage employs 'demons' -bits of information or code- that 'scream' in order to ascend a hierarchy of algorithmic hurtles. Artificial Intelligence and Machine Learning can be applied to any digital artistic medium, including video, sound, text, still images, and 3d modeling and printing. Further, AI and ML can be trained on almost any digital information, making it a powerful tool in the artist's arsenal. Diffusion Models and Generative Adversarial Nets combine predictive, generative, and adversarial operations and function as rapidly iterated critique, analogous to hyperspeed natural selection, quickly evolving their objects to high levels of complexity. LLM's employ large databases to generate texts, power chatbots, and even write code. Predictive Analytics employs game theory, statistical analysis, data analysis, scenario planning, and Modeling and Simulation to create accurate predictive models for different aspects of the future. Social Engineering operates on individuals and masses to "create" this future. These are the tools of technocracy. Artists should examine them and consider picking them up as well. Participants will explore the theory and history of AI and employ AI and ML, including local, server-side, and online AI's, as well as generative apps to make art. Labs will demonstrate the use of tools and resources to research and create AI and ML-based artworks and will allow time for participants to focus on individual or group Final Projects. Computer literacy, conceptual skills, and basic coding skills are required. Advanced coding will not be necessary but advanced coders are encouraged to participate.

Description

At the peak of the Dutch Tulip mania of 1637, a single bulb cost more than 10 times the yearly wages of a skilled artisan; in Extraordinary Popular Delusions and the Madness of Crowds, Charles Mackay writes that 12 acres of land were offered in exchange for a single Semper Augustus bulb- Tulipmania prefigured the hyper-financialization of art and aesthetics in the 21st Century.

In her 1917 New York Sun review of the Independents Show, Jane Dixon writes: " The artist calls It 'Tulips Hysteria Coordinating.Anyone who can think up a name like that ought to be put on exhibition along with the 'painting.'" Dixon, admitting her mystification, describes a cubist work comprised of splotches of paint little resembling tulips. Even more mystifying, the work -by Marcel Duchamp- appears to have never existed. There is no mention of it in the show's catalog, no mention by Duchamp, and scarcely a mention by biographers and historians. Loosed from the necessity of actuality, the work is one of Duchamp's most radical, with the viral power of a media-amplified "Popular Delusion" not unlike the Tulip Hysteria of its title.

From the caves at Lascaux to medieval Scriptoria to the spires of the Gothic cathedrals, the drawings of Leonardo and Kepler to the automaton commissions for the courts of Rudolf II and Catherine the Great; from the discovery of the binary in the hexagrams of the I Ching to Leibniz' Calculus Ratiocinator to Ada Lovelace's algorithm, Goethe's Faust, and Mary Shelley's Frankenstein, the course explores the technological imaginary that gave rise to modernity.

From Daguerreotypomania to Impressionism, Wagner's Gesamtkunstwerk to Brecht's Epic Theatre, the technophilia of the Futurists to the utopianism of Tatlin's tower; from the machinic works of Roussel and Duchamp to those of Nam June Paik, Lynn Herschman-Leeson, Rammellzee, and the CCRU; from Donna Haraway's Cyborg Manifesto to Paul Preciado's Pharmacopornographic Era, from the techno-cultural work of Pierre Huyghe and the Otolith Group to the bio-sculpture of Anicka Yi;

from early web-based art to the blockchain and NFTs, the course explores the ways in which artists have imagined and concretized modernity.

With the rise (and financialization) of digitally and technologically-entangled art and the ever-intensifying effect of technoscience upon the social and natural world, the question concerning artists' relationship to technology becomes more urgent than ever. Tulip Hysteria Coordinating explores artists' interactions with and approaches to technology from 4 million BCE to the present, examining their increasing complexity.

Description

Revelators, Akousmatikoi - Sound in Art, Music, and Ritual is an Art and Technology course focused on artists' use of sound in the creation of performance, recording, and immersive environments. Additionally, the course examines the history and theory of sound in art, ritual, and popular/experimental music through lectures, listening sessions, and screenings. This studio/lecture hybrid splits class time between lectures and the demonstration/employment of digital, AI, and analog methods for producing, installing, performing, and distributing sound across platforms. Participants will create single or multichannel sound works with an emphasis on experimental practice. In 1930, Blind Willie Johnson recorded the gospel blues classic "John the Revelator" for Columbia Records. Its haunting call-and-response vocals signal its origins in the "field songs" of enslaved people and the "spirituals" - syntheses of Ifa and Orisha religious rites, encoded messages of protest, and Christian religion - that informed modern gospel music. Its subject, John of Padmos, prophet of the Book of Revelation, vividly described the "loosing of the seven seals" that would unleash Apocalypse. Such "Revelators" have existed throughout human history-speaking, writing, illustration, and sometimes ranting their visions and prophecies-figuring the work of many contemporary visual, sound, and performance artists. Millenia earlier, at the birth of music as "organized sound", the Pythagorean cult splintered into Mathematikoi, forebears of positivist science, an Akousmatikoi (listeners), forebears of the arts - especially the sonict arts-who approached the Apeiron (infinite) by way of sound, art, and ritual. Optional readings include excerpts from Amiri Baraka's Blues People, Iqbal and Pendergrass's Realism in Messaien Birdsong, Roberta Brown's Xenakis on Xenakis, Brandon LaBelle's Other: Maryann Amacher, Kodwo Eshun's More Brilliant than the Sun, Adrian Piper's Notes on Funk, Mike Kelley's Cross-Gender, Cross-Genre, Sean Albiez's Postsoul Futurama, African American cultural politics and early Detroit techno, and Fred Moten's Taste Dissonance Flavor Escape (Preface to a Solo by Miles Davis).

Description

A course in discussing and developing artistic ideas and projects in relation to Hacktivism and exploring Rebellion as a framework for art. This class will discuss optimistic futuring, imagining creative solutions for the world's problems using art, data, imagination, and creative brainstorming in acts of rebellion as art or action and how to theoretically bring these ideas to life.

We'll examine nascent movements, ideas and cultures and their aesthetics and functionality in art to image a post-capitalist world and reconnection to nature and a recontextualization of technology.

This class will have students create ideas and works embodying these values and thematics, both as individuals and as groups.

Offering two master's degree programs and the general education curriculum for all CalArts BFA students, the School of Critical Studies establishes a vital discursive center for the entire CalArts community. Critical Studies is the site for the generation of new ideas through interaction and discussion with a diverse cross-section of practitioners and creative métiers—a place to acquire key intellectual skills and to interrogate what one might define as a “thinking practice.”

Students in the MFA Creative Writing and the MA Aesthetics and Politics Programs develop and refine advanced creative writing and sophisticated critical scholarship in a unique multidisciplinary arts environment dedicated to experimentation and innovation. Unlike many liberal arts colleges or traditional art schools, CalArts links creative and critical practice in profound and generative ways.

The new MA Aesthetics and Politics Program develops and enhances the original program established in 2007, adding an additional low-residency year. This new program is more flexible and substantial enabling students to focus with more time and depth on their studies, to take advantage of the creative environment of CalArts, to have access to a larger and more diverse cross section of theorists and artists, and to opt to study while working in their second year.

BFA General Education

The School of Critical Studies is also responsible for the undergraduate core studies education of CalArts, which form the liberal arts backbone of a bachelor's degree. Faculty from Critical Studies teach a range of exciting courses in the humanities, social science, cultural studies, sciences and mathematics that engage and inform each student's own artmaking. To learn more about BFA General Education and Critical Studies Minors, please visit the BFA General Education [BFA General Education Requirements](#) page.

For additional information please visit <https://criticalstudies.calarts.edu/>

Minors and Concentrations

Critical Studies Minors (BFA)

Students who have completed their Level 100 and Core Curriculum requirements have the option of obtaining a Minor in Creative Writing, Humanities, Social Science, Cultural Studies, or Science & Math. To complete a minor, students are required to take 18 units from their designated area of concentration. Speak with [Academic Advising](#) for more information.

Arts Education (BFA & MFA)

The Arts Education minor / concentration provides an opportunity for undergraduate (BFA) and graduate (MFA) students to explore teaching the arts in school and community contexts, with preparation in the foundations of teaching and learning at various age levels. The undergraduate minor focuses on teaching K-12 students, and the graduate concentration addresses both K-12 and higher education.

Students explore historical and contemporary theories of learning from a critical perspective, as well as develop fundamental skills in course planning, classroom management, and working with today's diverse student populations.

[Arts Education Minor Requirements \(BFA\)](#)

[Arts Education Concentration Requirements \(MFA\)](#)

Programs

CAP2.MA - Master of Arts - Aesthetics and Politics

General

Program Title	School	
Master of Arts - Aesthetics and Politics	School of Critical Studies	
Degree	Program Level	CIP Code (National ID)
MA - Master of Arts	Graduate	30.2601

Program Description

Two-Year Program The Aesthetics and Politics Program offers a dynamic and intensive experience that develops a shared vocabulary and critical framework in which we discuss phenomena ranging from the Arab Spring to neo-benshi, from bioart to neoliberalism, from human rights to queer hip-hop and third world cinema. Students develop ideas through presenting ongoing written work in a discursive environment with peers and are encouraged to focus their work by choosing credits from a list of elective courses.

The Program offers a set of core courses in aesthetic theory, political thought, critical discourse in the arts and the media, and theoretical writing that are the foundation of the degree. In addition, students are able to specialize in one of three areas of concentration-critical theory, global studies, or media and urban studies-to work towards a written thesis (a 5,000-word/50-page scholarly work) submitted at the end of the program. The Program values individual development by providing one-to-one mentorship with specialists within your field, student fora and a rich variety of internationally renowned visiting speakers.

Selected applicants are awarded Teaching Assistantships that can be turned into a Research Assistantship in the Spring semester. All MA candidates significantly improve their reading and writing skills, oral presentation skills, and creative and critical abilities during their one-year intensive training. The scope of the Program enables students to achieve their ambitions in their career choices and opens the

doors to new possibilities for life after postgraduate study. The Program helps prepare students for careers in a range of vocations, including art criticism, critical art-making, curatorial practice, politics, research at the PhD level and more.

Free Form Requirements

MA in Aesthetics and Politics

Students graduating from the MA Program in Aesthetics and Politics are expected to:

- Have read widely and deeply in the literature on modern and contemporary political, critical and aesthetic theory;
- Be able to articulate the complex relationship between political and aesthetic problems, theories and movements;
- Write critically and at a scholarly level for a variety of publications and audiences; and
- Begin to engage in dialogue with the world beyond CalArts.

This program embraces a multi-perspectival approach to the various intersections between the realms of the aesthetic and the political. First, the MA focuses on what is normally understood as political art -- i.e. art-making that chooses to become critical discourse in the public sphere. Second, the program addresses the reverse phenomenon -- the famous "aestheticization of politics" that so troubled critical theorists during the twentieth century and that continues to invite further reflection. Finally, the program aims to become a pole of attraction for students, artists, and scholars interested in the type of theorizing -- characteristic of continental thought -- that contextualizes aesthetic and political phenomena within a dynamic space in which social meanings are generated, renewed and

contested. Applicants interested in these fascinating crossroads and increasingly burgeoning fields of study will have the unique opportunity of enjoying the artistic environment and interdisciplinary dialogue offered by CalArts.

The MA Aesthetics and Politics is a one-year full time plus one-year low-residency degree program that engages students in an intensive critique of the relations between culture, politics and society in today's demanding global context. Taught in the unique arts-centered environment of CalArts, the Program offers a series of rich and dynamic core courses that span globalization, technology and media, politics and the arts, socio-economics and urbanism. Concentrated elective options delivered by a dynamic faculty and supplemented by a diversity of visiting specialists as well as public conferences enable students to work intimately with leaders in their field. Over two years, students work towards an independent thesis that marks the culmination of their degree and are provided a mentor to support the development of their work. The MA program equips students with a unique combination of creative and analytical skills that enable them to enter their professional milieu with confidence and the ability to participate in practical, cultural and theoretical fields of work.

This program is flexible and substantial enabling students to focus time and depth on their studies, to take advantage of the creative environment of CalArts, to have access to a larger and more diverse cross-section of theorists and artists, and to opt to study while working in their second year.

Credits

The Program requires students to take 36 credits of study spread out over two years: the first year, 24 credits, the second low-residency year, an additional 12 credits. The low residency year enables to students to undertake flexible learning options, virtual classes, and provides opportunities for alternative study, internships and professional networking. To arrive at the required number of credits for the MA, students can add elective courses or independent studies in either year one or two. Alternatively, internships or study abroad can also be credited towards the MA degree.

Year One (24 credits)

During the first year, students complete all of their core and elective course credits on-campus at the California Institute of the Arts.

Program Requirements (Description of courses are below)

Year 1, Fall Semester

- Contemporary Political Thought (3 units)
- Contemporary Aesthetic Theory (3 units)
- Critical Discourse in the Arts and Media (3 Units)
- Elective Course (3 units)

Year 1, Wintersession

- Theorist in Residence (1 unit)

Year 1, Spring Semester

- Critical Discourse in the Arts and Media (3 units)
- Thesis Seminar (3 units) Elective Course (3 units)
- Independent Study (2 units)

Year Two (12 credits)

During the second, low-residency year students complete their remaining coursework and prepare their graduate thesis. The low-residency second year enables students to deepen and expand their thesis research, but also to pursue internships, work, or international exchanges (for example with partner programs in France and the UK). International students should note that their options in year 2 may in part be determined by their immigration status. There may be some limitations on their Year Two Low-Residency Options because of restrictions associated with their visas. International students are advised to seek clarification on the available options through the Office of International Students and Programs

On-Campus Low-Residency Option Year 2,

Fall Semester (On Campus-Low Residency)

- Critical Discourse in the Arts and Media (1 unit)
- Thesis Directed Study (3 units)
- Independent Study/Internship/Elective Course (2 units)

Year 2, Wintersession (On Campus)

- Theorist in Residence (1 unit)

Year 2, Spring Semester (On Campus - Low Residency)

- Critical Discourse in the Arts and Media (2 units)
- Thesis Directed Study (3 units)

Off-Campus Low-Residency Option

Low-residency students complete 11 of their second-year credits through a virtual classroom experience. Students selecting the off-campus low-residency option are required to be physically present on campus during the two weeks of Wintersession for the Theorist in Residence seminar (1 credit). Students are also required to meet to discuss their thesis progress with their mentor in person during Wintersession on campus.

Year 2, Fall Semester (Off Campus - Low Residency)

- Critical Discourse in the Arts and Media (1 unit)
- Thesis Directed Study (3 units)
- Independent Study/Internship/International Exchange (2 units)

Year 2, Wintersession (On Campus)

- Theorist in Residence (1 unit)

Year 2, Spring Semester (Off Campus - Low Residency)

- Critical Discourse in the Arts and Media (2 units)
- Thesis Directed Study (3 units)

CMWP.MFA - Master of Fine Arts - Creative Writing

General

Program Title	School	
Master of Fine Arts - Creative Writing	School of Critical Studies	
Degree	Program Level	CIP Code (National ID)
MFA - Master of Fine Arts	Graduate	23.1302

Program Description

2-Year Program All MFA Creative Writing students are expected to attend closely to questions of form and aesthetics, as well as to the historical and critical contexts of literary work. Most classes combine workshoping of student-generated work with discussion of assigned texts. Students are also encouraged to explore the intersections between writing and other media/art forms, such as performance, digital media, visual art and film. While not all classes are offered every year, over the two-year program all students will take a wide selection, honing their individual visions and practices while experimenting with new forms and subjects. Writing students also benefit from being able to take courses for elective credit in the MA Program in Aesthetics and Politics, as well as other MFA/upper-level BFA courses throughout the Institute. In addition to MFA core creative and critical coursework, all candidates are required to give at least one public reading in their final semester, and produce a substantial manuscript (thesis), with a page count appropriate to related published work in the genre (i.e. 60-80 pages for poetry, 100-plus pages for a novel or creative nonfiction project, and so on), in order to complete the program.

Free Form Requirements

MFA Writing Program

The two-year School of Critical Studies MFA Creative Writing Program offers a variety of options for study: the Creative Writing Program—the choice of the vast majority of students; an Interschool Writing degree combining Creative Writing and another Institute MFA program (usually taking 3 years); and a Creative Writing MFA with an Integrated Media (IM) concentration. (Additional graduate concentrations are becoming possible as the Institute adds them.) Genre experimentation and an emphasis on critical contexts for creative work characterize each of these options. Students in the program are not required to declare a specific literary genre area and may move between genres as the needs of their work dictate. In support of their writing and thinking, students are paired with a faculty mentor and work closely with them throughout their time in the Program. The goal of the MFA Creative Writing Program is to enable students to shape their own unique practice, while familiarizing themselves with a rich and eclectic range of aesthetic and critical traditions through our experimentally oriented curriculum. MFA Creative Writing Program students will

- Cultivate a writing practice that allows them to produce work to the best of their creative and analytical potential
- Become fluent in a vocabulary that encourages communication and understanding of their own practice as well as of the work of their peers
- Prepare to become practitioners in a career that may include teaching through training in critical thinking and pedagogy
- Produce a thesis that accurately reflects their capacities as writers and that embodies their aesthetic foundation and vision
- Become good citizens of the workshop/seminar and learn to function within a community of artists, understanding the value of that community while following their own compass as writers
- Draw meaningfully from the other arts and academic disciplines to inform their own writing, or to develop an interdisciplinary practice
- Develop a sustainable writing dynamic as they enter a world of increasing artistic risk and diversity

Our Program is designed to inspire students to explore and employ both "creative" and "critical" modes in their practices, without seeking to draw a hard line between the two. All students attend closely to questions of form and aesthetics, as well as to the historical, cultural and critical contexts of literary work. Many classes offer a mix of seminar and workshop, and as such provide opportunities for discussions and presentations on both assigned texts and student-generated work. In addition to the more traditional forms of lyric poetry, short story, essay, memoir, novel, literary/arts theory, and reviewing, Program courses also cover genre-fluid forms, such as prose poetry, micro-fiction, and "hybrid" writing that blurs the boundaries between memoir and theory, fiction and nonfiction, criticism and poetry, among other cross-pollinations. While not all classes are offered every year, over the two-year program students take a wide selection of courses and are all encouraged to experiment with and create new forms and approaches.

The CalArts MFA Creative Writing Program is ideal for students keen to develop their confidence and range as writers and to benefit from CalArts' uniquely interdisciplinary and experimental atmosphere. The Program is also attractive to students who seek a formally expansive and critically challenging alternative to existing creative writing programs.

The requirements for being awarded a Master of Fine Arts degree in the Creative Writing Program are as follows:

1. Students must maintain two years of residence (minimum). The residence requirement may be extended for students specializing in writing for mixed media or interactive media formats depending on technical skills and in some cases for Interschool Writing students.
2. Students must complete a minimum of 40 semester units (see chart below for minimum requirements). To ensure graduation in a timely manner, students are expected to complete at least 10 units per semester.

3. Students must take two (2) Core MFA creative writing courses per semester.
4. Students may also take upper level Critical Studies offerings and/or institute wide electives.
5. All students meet with their mentors a minimum of three times per semester for advisement including a review meeting in spring semester to conduct mid-residency or graduation reviews.

MFA Interschool Writing

Interschool Writing students enroll in both Critical Studies and in an MFA program offered by another school of the Institute-Art, Dance, Film/Video, Music or Theater. Applicants must apply separately to each school. Requirements for the other métiers are set on an individual basis or according to that school's requirements. The following list refers only to the Critical Studies component of the Interschool degree.

To receive the MFA degree in Interschool Writing, students are required to:

1. Maintain two years of residence (minimum). The residence requirement may be extended for students specializing in writing for mixed media or interactive media formats depending on technical skills. It may also be extended for students whose Interschool requirements exceed a two-year residence (for example, the School of Film/Video).
2. Complete the same requirements as for the MFA Writing Program, except as noted in the chart of minimum requirements given below.

MFA Writing Program, Integrated Media

Students who choose Integrated Media (IM) are enrolled as, and must complete the same requirements as the MFA Writing Program except as noted in the following chart of minimum requirements.

Additional requirements—including IM seminars and critiques, specified Critical Studies courses, and electives from throughout the Institute—are set on an individual basis in consultation with the Office of Integrated Media.

MFA Creative Writing Program, Minimum Requirements (40 Credits)

To maintain financial aid eligibility, students are required to take a *minimum of 9 units per semester*; they are not encouraged to take more than 13.

Exit Strategies: Professional Development for Writers course

Directed Thesis Study with Mentor

Writing Now Reading Series

Course Descriptions

Core MFA courses are courses designed and taught by core MFA Creative Writing Program faculty.

Elective courses include upper-level (500) courses taught by faculty in the School of Critical Studies and upper-level and graduate courses taught in the other schools at the Institute.

Writing Now is a core requirement for every semester in the Creative Writing Program. It is structured around the work of contemporary writers who will also be visitors to the Program. The course, taught by a member of the MFA Creative Writing faculty, includes discussions, presentation, and workshops. The fall semester of the first year, Writing Now requires attendance at weekly meetings as well as the visitor events. Every semester thereafter, attendance is only required at the visitor events.

Katie Jacobson Writer in Residence is the required course during Wintersession. This course centers around the Katie Jacobson Writer in Residence's lecture, reading, seminars, and/or individual meetings with students.

"Exit Strategies: Professional Development for Writers" is required in the spring semester of the second year. This course provides students focused consideration of all aspects of students' transition out of graduate school, including publishing, agents, public speaking, and maintaining creative practice. In addition to developing skills and dossiers for job-seeking or doctoral work, Exit Strategies connects insights from Writing Now and the Katie Jacobson Writer in Residence to course readings, guest-run workshops and seminars, webinars, presentations, and panels.

The Thesis Workshops, while not required are recommended for all 2nd year students in the fall semester. This course is intended to provide students an opportunity to share, revise, and refine their thesis among peers with faculty guidance.

The Graduate Teaching Practicum is a course designed to support students while teaching as well as prepare them for future pedagogical opportunities. All students teaching on the BFA Level 100 curriculum at the Institute must be concurrently enrolled in this course.

The Directed Thesis Study with Mentor is a core requirement for all students in their final semester. This course supports the completion of the thesis required for graduation.

Description

Introduction to an arts-centered approach to technology in educational settings, including learning management systems, educational and creative software, teacher support tools, assistive technologies, e-assessment, and generative AI. Course also covers practical and creative applications of website development and the instructional uses of the Internet, word processing, graphics, desktop publishing, collaborative cloud-based technologies, mobile technologies, video production, spreadsheets, and other digital tools. Students practice using these applications to access and evaluate information, analyze and solve problems, and communicate and collaborate with colleagues. They also learn strategies and skills to enable them to prepare their students to be lifelong learners in an information-based society. Meets the technology-education requirement for the California Preliminary Teaching Credential, including CSUN's SED 514 course.

Developmental Foundations in Arts Ed

Subject Code Course Number
CAED 708

School(s) Program(s)
School of Critical Studies Provost

Academic Level
GR - Graduate

Credit Hours

Min Credit Hours:
3

Description
Students will learn about physical, cognitive, and social and emotional development in children and adolescents as related to arts learning, theories of learning in the arts, and current research on topics related to creativity, identity, and motivation in the arts. Students will apply these theories to their experience of studying the arts to inform: 1) the development of a teaching philosophy; and 2) the creation of developmentally appropriate activities and differentiation plans for use in their future teaching. This course will contribute to students' preparation for teaching in K-12 and postsecondary settings.

Description
Arts Pedagogy: Approaches to Teaching & Learning in the Collegiate Classroom

In her book, Teaching to Transgress: Education as the Practice of Freedom, bell hooks states, "To educate as the practice of freedom is a way of teaching anyone can learn." In our class, we will learn about teaching as artist-teachers in higher education and adult community programs. Together, we will read and discuss foundational education philosophies that continue to shape arts education discourse and practice. Our study will include contemporary artist-teachers and theorists who explore teaching and learning in diverse classrooms and contexts.

Together, we will read essays, prompts, provocations, and interviews. We'll listen to podcasts, watch videos and hear from guests who share about their work as artist-teachers. Our class spirit is generative and collaborative. It invites process, inquiry and reflection. Our learning also will be experiential. In addition to class discussion and in-class writing prompts, we will engage critically and creatively with course texts by doing activities that you might bring into your own classrooms. For example, we will use a variety of participation techniques and arts-based activities

to study our material and to model ways of teaching your students. We will learn about student-centered pedagogy, classroom management, facilitating equitable classroom cultures, lesson planning, classroom instruction, and critiques as formative assessment. Throughout, we will also consider what can sometimes seem to be less tangible - the relational, joyful and deep transformation that comes from teaching-learning with others.

Description

Introduction to Critical Studies is a dynamic BFA 1 cohort class designed to introduce you to the practices of inquiry and critique that shape key debates in the visual, performing, and literary arts, to prepare you to enter into the larger Critical Studies curriculum with confidence, and to establish awareness of foundational skills that are central to working as a critically informed artist today. As part of this course, each week you attend a large lecture presented by faculty and a small group discussion led by Teaching Assistants.

The course is unique to the Institute because it brings students together from all our Schools to participate in a shared conversation around some of the most urgent questions facing our collective communities, whilst providing a focused development of the writing, information literacy, cultural inclusivity, and critical thinking learning goals core to the Critical Studies BFA curriculum. Specific topics for the course change yearly, responding to contemporary issues in the arts and society at large, but all support an inquiry into our understanding of art-making, and the circulation of cultural, economic, and political power, with special attention to intersecting issues of history, technology, race, gender, class, and cultural difference. As this course immerses you in timely, relevant critical conversations, it also asks you to generate your own unique responses across a series of innovative writing assignments designed to help you to hone writing as a mode of critical thinking and self-expression.

CCRW204 - Introduction to Bizarro Fiction

Course Long Title

Introduction to Bizarro Fiction

Subject Code

CCRW

Course Number

204

School(s)

School of Critical Studies

Academic Level

UG - Undergraduate

Credit Hours

Min Credit Hours:

3

Description

What is Bizarro fiction? How do we define it and what is its significance? Bizarro has been called the equivalent to the cult section of a video store, Adult Swim shows in book form, and Alice's Adventures in Wonderland for adults. In this class, we will study novellas, short stories, flash fiction, and illustrated work from some of the biggest names in Bizarro to help us craft our definition. From Carlton Mellick III to Cameron Pierce, MP (Emma) Johnson to Laura Lee Bahr, we will analyze different strands of Bizarro fiction to help us better understand what types of stories fit into this genre. In addition to studying Bizarro fiction, we will invent it, too. Each student will craft a short story that incorporates his/her idea of Bizarro (the weird), and we will workshop every story in class to help the writer better understand (and improve) his/her work. Furthermore, this will introduce us to even more varieties of Bizarro. Besides writing short fiction, at the end of the semester, each student will present a project that combines one of the readings with his/her own métier.

Students should expect to spend approx. \$50.00 on materials and supplies for this course.

School(s)

School of Critical Studies

Academic Level

UG - Undergraduate

Credit Hours

Min Credit Hours:

3

Description

This course is designed both for students who have taken previous poetry writing classes and for those who have not. It approaches the writing of poems through an examination of the ways in which some recent North American poets (such as Hoa Nguyen, Douglas Kearney, Joshua Beckman, CA Conrad, Eileen Myles and Terrance Hayes) have renovated inherited poetic forms, explored open-page forms, and invented new forms along with new durational, constraint-based, improvisational and performative practices.

We will also look closely at the relation between form and practice, asking ourselves at what point a practice becomes a form of life. Students will be given regular poetry writing assignments based on our readings.

Class sessions will be divided between discussions of our readings and peer review of student work.

Description

Vampires, killer robots, zombies, oh my! The genre that we call speculative fiction can involve a lot of wild and dystopian premises that draw upon the imagination of the real to construct an original world. In this time of constant global emergency and crisis, and where apocalypse is no longer myth but a true reality, how do we write the fictions of wreckage when the end of time is not of the distant future but taking place right now? In this fiction workshop, students will read and examine different examples of the world's end and write their own stories that envision the past, future, and every urgent present. On the craft level, students will work with the forms of flash fiction and short story, and hone various elements of world building that include finetuning the rules of a story's speculative premise, character development, and plot development. Together, our stories will create a tapestry of answers to the questions: What, in fact, does it take to survive the end of the world? And what stories might emerge from the dredge and debris?

Description

Slipstream: Science Fiction Writing for Architects

This creative writing class familiarizes students with the art of making the strange familiar or the familiar strange. Students are introduced to genre works, ranging from pre-cyberpunk SF to the practice of "slipstream" and the New Weird. Both experimental and traditional story-telling techniques are reviewed with a special emphasis on hybrid narrative forms, the collage film essay, and architecture-based video games. Projects including the short critical review, the short story, film treatment, and video game script are presented for peer review. Sub-genres include Indigenous futurisms, Afrofuturism, space and colonization, gender and science fiction, and future cities. Materials for study range from the renowned works of Sherman Alexie, Octavia Butler, Samuel R. Delany, Philip K. Dick, William Gibson, and James Tiptree, Jr., to the current works of Brian Evenson, Hao Jing Fang, Shesshu Foster, Nnedi Okorafor and Nana Kwame Adjei-Brenyah. Materials will be supplemented by the collage film work of Craig Baldwin and guest lectures on contemporary video games Soma, Observation, and Outer Wilds among others.

Min Credit Hours:

3

Description

From choose-your-own-adventure books to video games, branching stories are everywhere! But how do you know what to write or where to even begin? This semester-long course explores the basics of creating branching and multi-narrative stories across a plethora of genres of writing and entertainment. During the course, we will investigate and discuss choose-your-own adventure novels, live immersive and interactive experiences, video games and VR, experimental film and television, and more to uncover what makes branching narratives so alluring! Students will learn the thrills and challenges of writing a branching story through in-class activities, reading assignments, and presentations/workshops; in addition to being given the opportunity to present and/or workshop a small-scale branching

piece of art. Topics that will be covered over the course will include: audience/reader agency, interactivity, the "illusion of choice", cause-and-effect, the different styles of writing a branching narrative, etc.

CCRW229 - Women, Looking: Writing the Female Gaze

Course Long Title

Women, Looking: Writing the Female Gaze

Subject Code	Course Number
CCRW	229

School(s)
School of Critical Studies

Academic Level
UG - Undergraduate

Credit Hours

Min Credit Hours:
3

Description
The title of this course, "Writing the Female Gaze," should immediately raise some questions for us. After all, what does it mean to be a woman--what does it mean to portray a woman? How do these representations change with form? In examining art, film, theory, and literature, this course asks how women articulate their own desires, selfhoods, and existence, in opposition to a patriarchal order that comes to define what appropriate representation looks like. Students will examine questions the above through discussion responses, seminar-style discussion, and a combination of creative and essay writing. In this course, the term "female gaze" will not refer only to cishet women, but to all female-identifying people, including trans, nonbinary, genderqueer individuals. In this class we will engage with a range of art, films, and texts that explore and engage with the female gaze. We will work with the overarching goal of writing comprehensive, curious, and fully formed essays and writings on the subject, through the approach of seminar-style reading discussion and a series of peer workshops. Together, we will think about the many visions of womanhood, of the limits of representation, and the contemporary world these texts and artists make visible to us. We will explore a range of styles of writing, and consider the effects of creativity in both voice and style towards composing powerful, interesting, and informative pieces of writing. Above all, we will explore, practice, and question the notion of writing on -- and of -- the female gaze.

CCRW246 - Worldbuilding

General

Course Long Title

Worldbuilding

Subject Code	Course Number
CCRW	246

School(s)
School of Critical Studies

Academic Level
UG - Undergraduate

Credit Hours

Min Credit Hours:

Course Long Title

Latinx Literature and Writing

Subject Code	Course Number
CCRW	262

School(s)
School of Critical Studies

Academic Level
UG - Undergraduate

Credit Hours

Min Credit Hours:
3

Description
In this course we will immerse ourselves in literature written by Latinx authors in the U.S., exploring fiction, nonfiction and poetry genres. In line with most recent literary developments and topical concerns such as climate catastrophe, social justice and historical reckoning, we will delve into speculative and science fiction, as well as fantasy, magical realism and other subgenres in literary, young adult and graphic novels and short stories. This course will cover new nonfiction works in memoir and cultural criticism as well as poetry that delves into the complexities of community, family and culture. We will explore writing by women, nonbinary and LGBTQ authors from across the Latinx diaspora, including immigrant, Indigenous, Afro-Latinx/ perspectives grounded in the pleasures of the body as well as the violences of on-going colonialism. Can calling upon joy and trauma through poetry and memoir, heal, transform and liberate? How do the techniques of speculative and science fiction speak to and ask us to deal with the question of the future?

CCRW266 - The Ugly/Beautiful: Poetry Workshop

General

Course Long Title

The Ugly/Beautiful: Poetry Workshop

Subject Code	Course Number
CCRW	266

School(s)
School of Critical Studies

Academic Level
UG - Undergraduate

Credit Hours

Min Credit Hours:
3

Description
The Ugly/Beautiful: Poetry Workshop
Disability justice activist Mia Mingus once posed the challenge: "Where is the Ugly in you? What is it trying to teach you?" In "The Ugly/Beautiful" creative writing workshop, we will read and write poetry that confronts the gritty matter of the ugly -- the foul, the undesirable, the profane, the abject. In other words, objects and subjects that gross us out, compel us to turn away. Rather than refuse the ugly, we will train our gaze on it and discover the fine line between love and repulsion, what's feared and exalted. We will trouble our ideas of what's ugly and what's considered beautiful.

Reading for this class will include poets who write unflinchingly about the dangers of (trans)feminine beauty, desirability and disabled bodies, meditations on death, cum and apathy, the body on the edge of survival, and decay, such as Sandra Lim's The Loveliest Grotesque, Kim Hyesoon's Autobiography of Death, Jasmine Reid's Deus Ex Nigrum, Zef Lisowski's Girl Work, Vievee Francis's Forest Primeval, and Monica McClure's Tender Data. Students will regularly turn in poems that we will discuss in workshop, a constructive place for community feedback, and revise these works as part of a final poetic project.

CCRW273S - Fiction As Witness

General

Course Long Title
Fiction As Witness

Subject Code Course Number
CCRW 273S

School(s)
School of Critical Studies

Academic Level
UG - Undergraduate

Credit Hours

Min Credit Hours:
3

Description
Fiction as Witness: Trauma, Transformation, and Black Women's Writing

In this course, we will explore the writerly idea that writing can be a healing practice for coping with both lived experience and the ambient violence of the world around us. We will also interrogate the readerly expectation and literary convention that fictional crises resolve, transforming character(s) in the process. And we'll inquire further: What happens when the writer not only relates trauma, but (re)enacts it? Are we dependent upon each other for remembering and release of traumatic experience? What are some of the forms and structures for this kind of writing? What are the limits of witness? How do we maintain focus on the fact

that we are engaged not in sociology or anthropology, but in art? To address these concerns, among others, we will focus our close reading, writing and discussion on a variety of fictional texts: poems, plays, short stories and a novel or two, along with excerpts from critics and theorists, and examples from dance, film, and visual art, and more. Students will produce original critical-creative works based on the their presentations of and engagement with course materials, and contribute to the ongoing conversation about where art and life intersect, and the transformative potential at the crossroad.

CCRW308 - Creative Nonfiction

General

Course Long Title
Creative Nonfiction

Subject Code Course Number
CCRW 308

School(s)
School of Critical Studies

Academic Level
UG - Undergraduate

Credit Hours

Min Credit Hours:
3

Description
Creative nonfiction is an artistic approach to writing nonfiction that uses the tools of fiction and poetry, invites experimentation, and defies the conventions of formal nonfiction. In this course we will be reading from a wide array of creative nonfiction, ranging from memoir and nature-writing, to cultural criticism and place-based writing, as well as hybrid forms and more. Through various writing exercises and assignments, students will experiment writing in various forms and will develop fully-developed writing projects of their own.

CCRW311 - Poetry Workshop

General

Course Long Title
Poetry Workshop

Subject Code Course Number
CCRW 311

School(s)
School of Critical Studies

Academic Level
UG - Undergraduate

Credit Hours

Min Credit Hours:
3

Description
This creative writing class will operate like a conventional workshop in which student-writers produce works-in-progress to offer for group critique. In a supportive environment, we will give constructive criticism to each other in order

to become better revisers and readers of our own work. We will also engage with a variety of assigned readings, from mostly modern and contemporary writers, that will act as springboards for our creative endeavors. To paraphrase T.S. Eliot-immature artists borrow, mature artists steal. This presupposes that mature writing stems from a strategic reading life. We will pay equal attention to both terms in the phrase "creative writing"-considering prompts that can spark new drafts and ideas while also adhering to the technical, formal, and rhetorical principles of writing that will ensure rigorous execution. Requirements include consistent attendance and participation, weekly writing assignments, and a final portfolio of revised and polished work.

Entre Mondos: Other-Worldly Latin Americ

Subject Code Course Number
CCRW 317

School(s)
School of Critical Studies

Academic Level
UG - Undergraduate

Credit Hours

Min Credit Hours:
3

Description
In this course, we will dive into Latin American and Latinx literature and art in the surreal, magical, gothic traditions. This course will introduce you to the historical and cultural contexts in which these traditions flourished. Exploring this together, we ask how they may shed a new uncanny light onto our own lives today. Through readings, discussion, creative and essay-writing assignments and a research project, we will listen to voices and stories that narrate lives and events. We will also get to question how the act of storytelling in itself brings forth new dimensions of reality that seem to exist beyond the actuality of our lived experience but nevertheless are embedded within it. In light of this, we will investigate how these fictive imaginings of the unknown construct meaning for us today and what this meaning is.

CCRW338 - Poetry, Bars, Lyrics

General

Course Long Title
Poetry, Bars, Lyrics

Subject Code Course Number
CCRW 338

School(s)
School of Critical Studies

Academic Level
UG - Undergraduate

Credit Hours

Min Credit Hours:
3

Description
This class will be a generative space to write new poems and/or lyrics. We will start with the lyric poem, exploring key forms and possibilities, and share new work in a supportive setting. We will read and discuss work by a wide range of poets, lyricists, and artists - from the spare and minimal (Karen O and Ocean Vuong) to the witty and acerbic (Sondheim and Sampa the Great) to the verbally acrobatic (Miranda and Blackalicious). We'll consider how poems are scored on the silent page and how they are brought to life in settings by folks like Caroline Shaw and Huang Ruo. Exercises and assignments will help us to think about questions of imagery, phrasing, song setting, internal rhyme, and shifting between registers of speech. By putting the "lyre" back into the "lyric," we will think about - and listen deeply to - poetry's roots in song and the sung.

CCRW 352

School(s)
School of Critical Studies

Academic Level
UG - Undergraduate

Credit Hours

Min Credit Hours:
3

Description
Necrosocial Poetry: How Poets Play Dead
Poets past and contemporary have often used the social space of the poem as one in which to 'play dead.' In this poetry writing course, we will do the same. Many of the poets we will read in this class, whose texts will help to instigate our own poems, have conceived of the poet or the speaker of a poem as, in a sense, already dead. This conception points to an understanding of literature itself as a "necrosocial" dimension of experience, a social space of experience that is often a very intense one for the writer and reader while remaining simultaneously an impossible one in the sense that socializing with the dead would be, from a rationalist perspective, empirically impossible. In considering poetry as a way to play dead together we will also be thinking about the nature of the imaginary social spaces we go to when we read and write poetry. Readings and writing prompts will help us explore this ambiguous terrain that can be seen, in the words of the poet Peter Gizzi, as "100% real and 100% imaginary." On the way, will also examine necrosocial poetic practices in the light of climate change and fears of civilizational collapse and even human extinction.

Description
What makes a plot twist good or bad? This two week long seminar will explore various different works that are either notorious for their stellar plot twists or left the audience lost and frustrated. Through this course, students will explore the art of foreshadowing and the craft of plot twists, examining how effective foreshadowing subtly prepares readers for surprises, while skillfully crafted plot twists create impactful moments of revelation. Through the use of short stories, film, and interactive media, students will learn to identify various methods of foreshadowing, from subtle hints to overt clues, and discuss how these techniques contribute to the ultimate plot twist! Students should be careful to avoid spoilers in order to get the full effect of this seminar.

CONTENT WARNING: This course will explore and analyze works of horror and murder mystery, so please be advised when taking this course.

Science Fiction & Modern Fantastic. Open to BFA-3 and BFA-4 students only. This creative writing class focuses on contemporary cross-genre works of science fiction, horror and fantasy. Students are introduced to genre works, ranging from turn of the century horror to contemporary fabulists and fantasists, and to the present practices of the "new weird," "slipstream" and "bizarro" fiction. Short writing projects are peer reviewed in a workshop format. Students may write works in the genre of their choice: fiction, poetry, screenplay. Sub-genres include ghosts and hallucinations, early weird writing, the fantastic, fairy tales, the uncanny, new wave speculative science fiction, body horror, post-humanism and post-Anthropocene fiction. Students are introduced to key critical perspectives on the literature of science fiction and fantastic. Guest lecturers include local authors, filmmakers and artists.

Min Credit Hours:
3

Description

In this class, each student will create a *sourcebook*--an archive of artistic inspirations. Which texts, works, methods, memories or experiences have served as the source of your creative practice? Which artists and thinkers have most influenced your work? What have you moved toward or against? Your sourcebook, which may or may not take the literal form of a print book,

will include your critical and creative inspirations (in their entirety or as citations or excerpts) along with critical/ creative annotations. To help develop this sourcebook, we will consider a range of sourcebooks by diverse artists and writers. We will reckon with the archive and its relationship to social location--race, class, gender, sexuality. We will negotiate different forms of materiality. (How can we capture the ephemeral?) We will deeply consider knowledge, information, and power in relation to our own creativity. At the end of the term, will display our sourcebooks in an in-class pop-up show and place a collective class sourcebook reader in the special collections of the CalArts library.

CCRW457 - Feminist Poetics

General

Course Long Title
Feminist Poetics

Subject Code Course Number
CCRW 457

School(s)
School of Critical Studies

Academic Level
UG - Undergraduate

Credit Hours

Min Credit Hours:
3

Description
Using an intersectional feminist lens, we will explore how writers and artists navigate relationships between writing, identity, culture, politics and art making. We will ask, how might feminist poetics be a strategy for envisioning and re-visioning language use, forms and ideas? How is feminist poetics a mode of critique, desire, invention, inquiry, and imaginative literary praxis? How is feminist poetics a way of writing visions of resistance and transformation?

Rather than beginning our study with the statement, "Feminist Poetics is,," our class will build a collective understanding from the texts we engage with and from reflections on our own creative work.

Together, we will read in and across genres. We'll read book-length works, poems, essays, statements of poetics, workbooks, prompts, provocations, and interviews. We'll also listen to podcasts, watch videos, and hear from guests who share about their work and commitments. Creative writing workshops are a central component to our class. Students are invited to share their own writing and respond to their peers' work. Our creative spirit will be generative and process-based, inviting you to experiment with writing strategies and goals.

CCRW462 - Writing Climate Breakdown

General

Course Long Title
Writing Climate Breakdown

Subject Code Course Number
CCRW 462

School(s)
School of Critical Studies

Academic Level
UG - Undergraduate

Credit Hours

Min Credit Hours:
3

Description
Climate Breakdown poses great challenges to all aspects of human life - biological, technological, economic, political, spiritual, cultural, etc. It challenges human beings to rethink their conceptions of what might be proper forms of earthly existence as it also challenges us to rethink our relationships to the nonhuman world and the ecologies that sustain our lives and the lives of all other earthly beings. Clearly, Climate Breakdown also poses great challenges to artists and to writers. In this class we take up some of those challenges through the methods of Creative Writing, engaging some of the issues of content and form (including aesthetic form and content, cultural form and content, spiritual form and content and political form and content) that writers (and other artists) find themselves facing in this time of unprecedented, mind boggling, human caused climate shift and collapse. We will engage these issues across various texts and films. We will engage them in student assignments that move across genres of Creative Writing, from speculative fiction to poetry, non-fiction and hybrid forms.

CCRW464 - Writing & Performing the Self

General

Course Long Title
Writing & Performing the Self

Subject Code Course Number
CCRW 464

School(s)
School of Critical Studies

Academic Level
UG - Undergraduate

Credit Hours

Min Credit Hours:
3

Description
What is a self? How might writing and performance together help forge or express its possibilities? Drawing on creative writing, performance art, literature, art criticism, cultural studies, and black feminist theory, this class will open space for CalArts students to write and perform the self. Students will read personal/ autobiographical / performance texts, keep personal journals, see live and archived performance, write critical reflections, and more. Key course topics will include embodiment, memory, autobiography, persona, subjectivity, disclosure, tracery, gesture, and action. We will also reckon

with the self in relation to race, class, gender, sexuality, and other vital locations of identity. Class readings, exercises, assignments, and showings will help students develop final performance text(s) over the course of the term. Class will conclude with public reading/ performance as well as the compilation of an annotated bibliography. Together we will investigate, express, and activate the self in art and the world.

Students should expect to spend between \$50-\$75 one course books and performance tickets.

Course Long Title
Tiny Fictions

Subject Code	Course Number
CCRW	489

School(s)
School of Critical Studies

Academic Level
UG - Undergraduate

Credit Hours

Min Credit Hours:
3

Description
This workshop will focus on extremely short pieces as a way in to writing narrative and non-narrative prose. We'll read flash fiction, sudden fiction, blast fiction, short-shorts, microfiction, minimalist fiction, prose poems, microessays. We might look at Anne Carson's short talks, Lydia Davis's work, John Keene's Annotations, Ben Marcus's fake instruction sets, etc. We'll investigate all of these as way to think about the limits of what prose can do in a condensed and linguistically focused space. We'll think about the sentence as a unit of meaning and as an aesthetic gesture, discuss the acoustics of prose, rhythm and sound in fiction, and so on. The heart of the class will be workshopping your very short pieces.

Description
Science Fiction & Modern Fantastic.
This creative writing class focuses on contemporary cross-genre works of science fiction, horror and fantasy. Students are introduced to genre works, ranging from turn of the century horror to contemporary fabulists and fantasists, and to the present practices of the "new weird," "slipstream" and "bizarro" fiction. Short writing projects are peer reviewed in a workshop format. Students may write works in the genre of their choice: fiction, poetry, screenplay. Sub-genres include ghosts and hallucinations, early weird writing, the fantastic, fairy tales, the uncanny, new wave speculative science fiction, body horror, post-humanism and post-Anthropocene fiction. Students are introduced to key critical perspectives on the literature of science fiction and fantastic. Guest lecturers include local authors, filmmakers and artists.

Description
In the era of the internet, what can a letter do? What new forms of letters circulate? How has social media changed dialogue and conversation? What words can we exchange and how? Drawing on a range of critical and creative practices, this creative writing class will invite students to read and write letters and to conduct, join, and listen to conversations. Incorporating fiction, nonfiction, poetry, and hybrid writing, we will also engage visual art, tweets, podcasts, and more. Key course topics will include childhood, family, friendship, love, sexuality, gender, race, police violence, trauma, and coming of age. Students will leave having completed "a letter you thought they'd never write or a conversation you

thought you'd never have" as well a future letter scheduled to arrive to the sender many years later. In our letters and conversations, we will claim voice and risk vulnerability. We will navigate forms of address, tone and timbre, audience and occasion, intimacy, protest, and more.

Description

Memory, Media and the City. After studying how collective memory operates within cities, and its relationship to literature and cinema, students develop their own stories, or film scripts, essays, cultural histories, plays, installations, where the subtleties of memory (and forgetting) are essential. For example, we will study techniques for "unreliable narrators" in variations of noir, as well as archival fact and fiction across many various genres. We will also excavate how the ambient, expressionist setting is developed-- in cityscapes and in fictions. These discoveries are then applied to final projects involving research into how the facts of a city are cannibalized as social imaginaries, from memoirs to archives to journalism, to scripted spaces. Students build drafts where memory within cities-- as an act of distortion and evasion--are essential; or can be revealed. Recommended for MFA and MA students in writing programs.

Description
The Artspeak course series provides instruction for multilingual students in the linguistic and cultural conventions of art school. As students studying in the United States, English use is part of your overall development as artists/designers/practitioners. Therefore, Artspeak classes have two purposes: 1) to work with the English you already know to develop focused strategies so that you can work efficiently and effectively with in art/design/performance contexts and 2) to add new knowledge to your English language use. Artspeak 1 is an integrated, four-skill, (reading, writing, listening, speaking) English for Academic Purposes course designed for students with at least an intermediate proficiency level in English. The content of the course focuses on conventions of North American academic reading/writing and classroom oral/aural language: understanding and producing spontaneous speech in the classroom, understanding and creating metaphor in academic contexts, and defining terms, genres, and communities of practice. Artspeak 1 provides Critical Studies units for graduation.

Description
Fairy Tales, Myths, and Fables: Now vs. Then
Special Topics course for BFA-1 students only.

This course will look at fairy tales, myths and fables, both in terms of the way that they were historically told or presented and at how they've changed in our contemporary era. We'll do this as a way of trying to understand how we reshape common narratives as a way of justifying how we change as a culture. We'll begin by looking at Greek myths, work by the Brothers Grimm, Perrault, Anderson, and others, and move from there to revisionist work by Angela Carter, Robert Coover, and Kate Bernheimer, as well as a few graphic novels (Fable, The Sandman, etc.) and movies (both Disney-like versions and darker adaptations). How does a fairy tale change as it crosses from one form or genre to another or as it moves forward in time? And, more importantly, how do the changes change us in ways we don't expect?

Description
Gangsters Geeks & Spies - Asians in the US
Special Topics course for BFA-1 students only.
During the height of Covid-19, Asians in the U.S. experienced a surge of hate crimes that seemed to conflate their race with the pandemic itself. The language directed at Asians was reminiscent of previous waves of anti-Asian racism, such as the Yellow peril, the WWII internment of Japanese Americans, and the murder of Vincent Chin. This course will use the past incidents as a starting point to ask questions about the present. Why are Asians considered the "perpetual foreigners" and interchangeable? Why are Asians both over- and under-sexualized? Has there been more representation of Asians in art and media recently, and has this helped to combat stereotypes?
We'll explore these issues through poems, fiction, film, music, stand-up, video games, and other forms of media. Cathy Park Hong's essays in Minor Feelings will unmask the gaslighting of immigrants and refugees. The Netflix series Beef will make us laugh (and sob) out loud at Seven Yeun and Ali Wong's escalating war of road rage. And the shoegaze-y soundscapes of Mitski and Japanese Breakfast will remind us that culture is much about joy as it is about resistance.

Antiquity in Song China and Meiji Japan

Subject Code	Course Number
CCST	202W
School(s)	
School of Critical Studies	

Academic Level
UG - Undergraduate

Credit Hours

Min Credit Hours:	Max Credit Hours:
0.5	1

Description
In this course, we will engage in an in-depth study of the concept of antiquity in the intellectual and artistic context of Medieval China and Modern Japan. We will devote one week to Meiji Japan and the second to Medieval China. The two weeks can be taken independently as individual courses as well as jointly as a single two-week course. In the case of Meiji Japan, we will start from a paradox: while the Meiji government was modernizing Japan on an all-encompassing level, they also attempted to return to a mythical "antiquity" ideologically, religiously, and intellectually. We will analyze the ways in which the antique world of myth in fact influenced the world of modernization in Meiji Japan through closely reading works of key thinkers (Motoori Norinaga and Hirata Atsutane) and analyzing artworks of the period. We will attempt to discuss conceptions of antiquity based on artworks ranging from ukiyo-e paintings to contemporary Japanese anime culture. During this workshop, we will discuss how antiquity was thought, imagined and continued in the contemporary Japanese avant-garde movement of art, media and music. Our second week will focus on how the medieval Song Dynasty of China responded to and reconstructed the ancient Chinese past. Meiji-era Japanese intellectuals identified the Song Dynasty as the first "modern" society, but this time of flourishing urban life and constant technological and cultural changes was also a

time that turned to China's distant past to find both models for the future and objects of consumption. Did this period's thinkers define "antiquity" as a distant past because it helped enhance the pleasure of appreciating exotic antiques, or because it provided the keys to authentic life? We will attempt to answer this question through closely reading passages from the key thinkers (Zhu Xi and Ouyang Xiu) and study paintings and material objects in the context of connoisseur theory to interrogate the Song reconstruction of ancient Chinese ideas. This course will be a reading intensive workshop with extensive visual materials. This course aims to cultivate close reading skills, to strengthen and deepen critical reading, writing, and interpretive practices, and to further students' understanding of the interconnections between a diversity of imagined pasts and modernizing processes across the world.

Description
The struggle for Black freedom is as old as Black oppression. The battle took place on plantations, in burning towns and hosed-down public streets, in prisons, but it has also taken place in newspaper editorials, in scholarship and in art. This course is a survey of the intellectual practices of freedom while Black - as can be read in Black texts, in Black freedom as recorded by freedom's enemies- and the use of the idea of freedom deployed by colonial power. Here, we will explore and reveal patterns of fugitive Blackness within anti-Black colonialism.

This course is also a close reading of the other side of freedom - the discursive universe that radical Black freedom finds itself thrust up against. We look at writings against abolition, scientific writing, contemporary right-wing journalism, social media posts etc., that argue - whether measuredly or aggressively - against expressions of African liberation.

We will ask: are there through lines in arguments against Black liberation? How do we understand liberal white supremacy? Or the white supremacist capturing of "woke"?

How are anti-Black impulses masked in "objective" language? Has anti-Blackness re-invented itself rhetorically to survive in spaces putatively hostile to it? Are we, today, witnessing a sea change in the permissibility of anti-Black speech or something new?

Description
Visions of Utopia: Regional Diversity and Continental Integrity in Latin American Culture
This course serves as an introduction to the rich traditions and cultures of Latin America, from the period before the arrival of the Europeans, up to the present day. We study different modes of cultural production from the different regions and periods of Latin American history, including literary works, political manifestos, philosophical essays, and works of art. In particular, we examine how, beyond the multiplicity of languages and cultures it harbors, Latin America constituted a utopian social and cultural project, in which intellectuals, artists, and activists imagined different futures for its nations and for the continent as a whole, after the colonial experience. In doing so, we explore how the regions of Latin America also took part of the integrative attempt to think of a singular identity and global destiny for themselves, across national boundaries.

Some of the questions we shall interrogate include: the problematic mediations between Western and native traditions which defines the continent since colonial times; the way in which the emergence of new literary forms and artistic schools in Latin America were bound to new visions of the future for its embryonic nations after The Independence; the tensional relations between the pursuit of intellectual and practical autonomy, and participation in global movements transpiring in the arts and politics; and the rise of new experimental and transnational expressive forms in the 21st Century, such as the

Chicano
and Latinx movements in the arts and literature.
By tracing these manifold developments, we will
finally
seek to analyze the impact and place of Latin
American culture in the contemporary geopolitical
and
transcultural horizon

CCST 224

School(s)
School of Critical Studies

Academic Level
UG - Undergraduate

Credit Hours

Min Credit Hours:
3

Description
One of the only certain universal experiences for
all human beings is death.
However, nearly every aspect of that experience
varies from culture to
culture. How do we respond to the dying? How do we
mark their passing?
What is done with the body? How is the person
remembered by the
living? Is there life after death? This course is
an exploration into the
rituals, beliefs, and customs of varied cultures
and religions surrounding
death and dying. We will discuss concepts of the
soul, grief and mourning,
symbolism, origin myths, burial rituals and more.
This course seeks to
open our minds to the wide cultural and religious
variety of approaches to
"The End" of life as a rite of passage.

Description
This is a course on the concept of utopia, the
history of U.S. utopian practices of the
nineteenth and twentieth centuries, and the theme
of utopia in art, music and literature. Is utopia
always shadowed by dystopia? And is it worth
pursuing anyway? A selection of U.S. religious and
socialist utopian communities of the nineteenth
century, utopian communes of the nineteen-sixties
and imaginary utopias will be considered. In
addition to writing a critical essay, students
will have the opportunity to collaborate on their
own proposal for a utopian community.

Description
Imaging Culture: Representation and Visual
Anthropology.
As the discipline originally chartered to
classify 'races of man,' images and their
interpretation have long been important
components of anthropology. From early
anthropometrics and photographic recordings of
rituals and daily practices, to ethnographic film
and multimedia works, anthropologists have
integrated visuals in a range of forms and uses
that closely parallel technological developments
in imaging. This extensive integration, however,
has been accompanied by a conflicting set of
positions regarding visuals and their
relationship to methodology, representation, and
interpretation.

This course explores issues of debate that
visuals stimulate in ethnographic projects as
well as the methods used to produce them. It
takes a survey approach to anthropological
visuals, with an emphasis on works that have
shifted the perspective of how images and their
production impact relationships among subjects,
between subjects and ethnographers, between
ethnographers and their work, and between these
works and their audiences. In addition to films
and readings, students will participate in a
series of visual exercises that will enable them
to engage with the issues of representation
considered in the course.

CCST263 - Feminist Text and Textile Practices

General

Course Long Title

Feminist Text and Textile Practices

Subject Code	Course Number
CCST	263

School(s)
School of Critical Studies

Academic Level
UG - Undergraduate

Credit Hours

Min Credit Hours:
3

Description

What is a feminist practice? How can texts and textiles inform it? Drawing on literature, creative writing, critical theory, visual arts/crafts, and feminist theory, we will explore how texts and textiles have been interwoven in the formation of feminized subjects and have been challenged and repurposed by feminist movements, and how these different artistic practices communicate with each other. Collectives and authors will be invited, such as sewing circles working in the Latin American tradition of denouncing state violence through enduring fabric arts.

We will engage in weekly discussion on different feminist readings, both literary and critical, and visual arts and crafts which engage fabrics or feminist discourse. We will look at text pieces that engage language as a textile, how a book can be woven, how words can be threaded, how a textile can engage a language. As a group, we will reflect and discuss about the elements that make up a feminist practice. Students will write an essay that engages a text(ile) feminist practice, homework that engages reflections or prompts, an oral presentation about an artist not discussed in class, and a final collaborative project that involves creative work related to the class.

CCST264 - Asian American Genres

General

Course Long Title

Asian American Genres

Subject Code	Course Number
CCST	264

School(s)
School of Critical Studies

Academic Level
UG - Undergraduate

Credit Hours

Min Credit Hours:
3

Description

How might reading across genres within contemporary Asian American popular culture help us understand "Asian American" as itself a pan-ethnic umbrella term that contains many "genres" of Asianness? What might seemingly unrealistic Asian American genre fictions tell us about real material changes to Asian identity and culture? How is generic Asianness represented through language versus the cinematic screen? And finally, how do emerging Asian American artists continue to negotiate the task of representing Asianness in and through genre? How much is the idea of an "authentic" Asian American identity shaped by fictional forms?

This course explores the ostensibly generic category that is "Asian American" through many forms of popular culture. Examining the construction of Asian American identity through conventions associated with generic narratives and tropes, literary genres (e.g. memoir, campus novel) and visual culture (e.g. sci-fi, martial arts) will be our primary objects of inquiry.

Maxine Hong Kingston's ground-breaking text *The Woman Warrior* (1976) is a foundational example of Asian American genre fiction. The contested generic status of *The Woman Warrior*-is it a real-life memoir or a fictional novel?-allows us to examine the often slippery relationship between what counts as "authentic" versus "fake" Asian. The syllabus's more contemporary examples, departing from the memoir and memoir-adjacent narratives typically associated with the Asian American canon, more contemporary examples draw increasingly on "lowbrow" genres such as romance, kung fu, spy fiction, and sci-fi.

Description

The outsider 'net addicted hackers of cyberpunk served as a neon-soaked prism refracting dystopian anxieties of the 1980s. Megacorps ruled the world. Most of humanity had been left to languish in sprawling sky-high slums. And the tragic, alienated protagonists were always too down-and-out to even hope for redemption.

This course asks students to accept the four primary rules of cyberpunk - "style over substance," "attitude is everything," "always take it to the edge," and "break the rules" - while looking for a way to rescue it from aesthetic cliché, which has deadened its power of critique.

We will explore that vast array of mediums that have taken up cyberpunk, including short stories, novels, cinema, anime and manga, board games, video games, music, fashion, design, and more. Along the way, we will interrogate its cultural conventions, including the figures of the femme fatale, queer cyborg, afro-futurist rockers, techno-orientalist robots, holographic celebrities, slum-dwelling underclass, synthetic transhuman enhancements, chemical additions, automated androids and AI, mega-cities, exclusion zones, secretive military projects, splashy subcultures, nihilist deathcults, and new age religions based around techno-gods.

For assignments, students will undertake projects to develop characters with tragic flaws, worlds plagued by certain irresolvable problems, environments that exaggerate specific hostilities, technologies that magnify existing anxieties, subcultures that amplify particular conflicts, musical soundtracks that set the mood, lifestyles that express values, and stories that specify the causes for them all. These assignments will be paired with critical reflection to explain why/how these choices with scholarly thinking.

Description
Fairy Tales, Myths, and Fables: Now vs. Then

This course will look at fairy tales, myths and fables, both in terms of the way that they were historically told or presented and at how they've changed in our contemporary era. We'll do this as a way of trying to understand how we reshape common narratives as a way of justifying how we change as a culture. We'll begin by looking at Greek myths, work by the Brothers Grimm, Perrault, Anderson, and others, and move from there to revisionist work by Angela Carter, Robert Coover, and Kate Bernheimer, as well as a

few graphic novels (Fable, The Sandman, etc.) and movies (both Disney-like versions and darker adaptations). How does a fairy tale change as it crosses from one form or genre to another or as it moves forward in time? And, more importantly, how do the changes change us in ways we don't expect?

Description
Trap Music and the Black Arts
This course puts "Trap Music" i.e. contemporary hip hop from Black lumpenproletariat/underclass cultures into conversation with poetry, plays and film from the Longue dure Black Arts/Black Power movement -- a Black cultural, intellectual and artistic movement identified with the work of Black artists such as Amiri Baraka and Sonia Sanchez of the 1960s and 1970s but extending beyond these decades. This course invites students to be scholars, requiring that they draw from their own knowledge of trap music, subject it to critical analysis and situate it in the intellectual history of the Black political thought. We will read them together to discuss commonalities and divergences, aesthetic choices, gender, race, colorism and class issues and ask what art reveals about political conditions and what political work art attempts. The course aims to have students critically examine the music they might listen to as art, ideology and political tract and at the same time brings Black popular (ized) lumpen culture into conversation with Black Power/ Black Studies not merely as an object to study but a peer in conversations about Blackness and Black futures.

CCST293 - Poetics & Politics of Queer Temporality

Poetics & Politics of Queer Temporality

Subject Code Course Number
CCST 293

School(s)
School of Critical Studies

Academic Level
UG - Undergraduate

Credit Hours

Min Credit Hours:
3

Description**Queerness of the Ancients: The Poetics and Politics of Queer Temporality**

This course introduces, examines and interrogates queer artistic and literary production of two underexamined areas in relation to critical studies and queer studies: ancient literature and the literatures of non-Western civilizations, with a special focus on the depictions of intense eros, the reception and localizations of foreign ideas, the establishment of how an ideal can be made through rhetoric, negotiations between multiple identities, conflicting philosophical and empirical ideas, and contemporary artistic adaptations of old tales. What kind of desires and bodies does "queerness" describe? How did the queerness of the ancients differ from queerness now? To what extent is queer theory relevant to ancient civilizations? Do encounters with old texts require or inspire a retheorizing of queer theory?

Methods and Approaches

The major focus of this course is on complex and fruitful materials from ancient Greek and ancient Chinese civilization, but these will be supplemented by premodern queer experience from Japan, Mexico, Persia, India, Thailand, and England and by contemporary films of the avant-garde from China, Korea, Taiwan, Japan, and Thailand. Students will also have opportunities to speak with artists who are practicing issues related to queer experience. Similarly, we will have writing exercises and creative workshops to record our own present day queer production, and to think together about how to incorporate the ideas we produce in our readings of queer experience in ancient texts with our own art. Ultimately, our studies of theory, ancient texts, and contemporary artworks are meant to inspire students in their own artistic practices.

This course will be a reading intensive seminar since a proper interpretation of the past takes more patience and time than readings in more familiar territory. This course aims to cultivate close reading skills, practice both creative and critical writing, and to inspire your artistic making/ideas from thinking about ancient cultures.

Min Credit Hours:
3

Description

In Pursuit of Community: The 20th Century African American Migration and the Meanings of Citizenship.

This is a course on the discourse and rhetoric of citizenship, migration, and of the migrant. We will begin by inquiring into the nature of citizenship itself. This general and broad examination will lead us to look how the idea of citizenship came to be articulated in the U.S. Constitution, in particular in the Fourteenth Amendment, ratified in 1868. Central to this part of the course will be an examination of what it might mean that citizenship is defined as being

bound to political jurisdiction, rather than to race, ethnicity, language, or territory. We will then move on to our primary case study, which will be the so-called "Great Migration" of African Americans out of the rural South into the cities of the North, Midwest, and West, during the middle decades of the last century. This will begin with a historical overview of the rise of racist segregation in the South, followed by a discussion of Plessy v. Ferguson (1896), the Supreme Court case that legitimized racist law. From there, we will study the migration itself in detail, through reading the histories and testimonies of a select group of migrants themselves, to see how that vast manifestation of social change altered the United States as such, and changed the country's self-conception of citizenship. By looking into the relationship between the discourse that greeted black internal migrants, we will also be able more profitably examine how these questions continue to reverberate in our own time, with its subsequent migrations. The course will conclude with an examination of contemporary migration discourse, centered on the United Nations General Assembly's 2018 "Global Compact for Safe, Orderly and Regular Migration."

Description

Chocolate Babies, Handmaidens, and Kuchus:
Decoding Global Queer
Cinema

"Chocolate Babies, Handmaidens and Kuchus..." closely examines films that challenge the reflex to center whiteness that we see in a lot of mainstream Western queer cinema and culture. Among concerns addressed: How and where do the visionary/socialist politics of iconic trans activists Marsha P. Johnson and Sylvia Rivera manifest in representations of queers of color in contemporary indie queer cinema? How can we use their politics as a filter to critique contemporary queer representation? In what ways are the critiques leveled by the late Vito Russo's analyses of historical queer representation in Hollywood film still relevant, and how - if at all

- has contemporary queer cinema realized his hopes and predictions for queer representation? How has his analysis been found wanting? This course intends to wrestle with and complicate those questions and more through close reads of films from around the world by and/or about LGBTI people of color. In this class, film is the primary text that will be supplemented by written texts. Students will strengthen their own critical voice and evaluative apparatus while developing nuanced and layered definitions of "diversity and representation" that challenge some prevailing and popular notions of those ideals. That will be accomplished through the following:

- . Class viewings and discussions of films from around the world (South Korea; Hong Kong, Brazil; America; Spain; U.K.) that span genre and include fiction and non-fiction titles.
- . Close reading of film criticism and social analysis from writers including queer film historian Vito Russo; Black feminists bell hooks, June Jordan, and Gabrielle Civil; queer cultural critics Yasmin Nair, Kenyon Farrow, and Keguro Macharia, cultural critic Jia Tolentino, and breaking reporting on the lives of queer POC around the world.
- . Examining the relationship between queer activism (such as Stonewall and the Civil Rights and feminist movements of the 1960s-70s; ACT-UP in the 80s and '90s) and the evolution of queer images in film.
- . Reading queer literature (especially that by queer POC) and discussing how it set the foundation for (and is in conversation with) a lot of queer film (especially that with protagonists of color.)

School(s)
School of Critical Studies

Academic Level
UG - Undergraduate

Credit Hours

Min Credit Hours:
3

Description
Aesthetics of Pan-Africanism
This course aims to critically evaluate the aesthetics of the Pan-African imaginary as expressed in literature, music, political writing, film and theory. Pan-Africanism is more than a political project. It is often championed by Africans and the descendants of Africa as a mode of survival in theMaafa, i.e. the massive trauma of slavery and colonialism that in many ways have defined African modernity. We aim to study sentiment and symbol in the Pan-Africanist idea. Its expressions of longing and loss and fantasies of often impracticable forms of unity. Our object is to

discover value in its multiple modes of expression rather than the efficacy or prospects of its politics. We read thinkers such asKwame Nkrumah, Marcus Garvey,Amy Jacques Garvey, Bob Marley, Aime Cesaire, Ama Ata Aidoo, Vodun/Voodoo, Queen Ifrica, Muammar al-Qaddafi,Haile Gerima, Kamau Brathwaite, Sunni Patterson, Thomas Sankara, Assata Shakur etc. They will be read not for what they dreamed but how they dreamed - the poetics of their dreaming and the efforts to translate and crush centuries-old sentiment into the rigidity of modern institutions.

Description
Feminist Practices & Politics
At the Intersections: Economy, Body, Identity
In her poetic-prose work Schizophrene, Bhanu Kapil writes, "An economy is a system of apparently willing but actually involuntary exchanges." What are these economic systems that permeate our bodies, lives and decisions, and how do they work? How do they work on and through us as people living in a late-capitalist society? And importantly, how do economic structures inform your practices as artists and creators?

Our goals are to look more in depth at terms and concepts we hear on a daily basis and to explore how they affect us and the world we live in. We will gain a working knowledge of contemporary discussions and debates about labor, debt, austerity, privatization, and governmental and non-governmental organizations (NGOs). In addition to critical texts, we will look to film, literature, performance and music to see how artists are interrogating economic issues in their practices, including the tenets of economic theories of capitalism, neoliberalism, and Marxism.

Our study will take an intersectional, materialist feminist approach that takes gender, sexuality, race, ethnicity and ability as its starting point. We will locate our analysis in material life including class, jobs, paid and unpaid work, money and resources. Our analysis and practice will highlight the feminization of poverty, domestic work, emotional labor and economic inequity.

Description

Asian American Text + Image

Desire, Power, Flight: Intimacies of the Political

Body in Asian American Text + Image

The title of this course borrows from Asian American filmmaker, writer, and theorist, Trinh T. Minh-ha, and her text, *Woman Native Other*: "Touch me, and let me touch you, for the private is political." By examining literature, media, and art, we will explore the extent of Minh-ha's declaration-what can we learn about history, politics, and culture from the intimacies and desires in Asian American art, and conversely, what can we learn about the self and embodiment by examining sociopolitical contexts and communal acts of resistance against power? What metaphors can we make from definitions of flight, which can connote movement across borders or oceans, metamorphosis, transition, escape, freedom, reclamation, transience, or transference? How does this all apply to topics from immigration exclusion acts to the Model Minority Myth, internment to exoticism, intergenerational conflict to subaltern subversion? Asian America and work produced by Asian Americans-whether in the disciplines of literature, film, TV, art, political history, or sociology-offer a unique point of departure to study critical race theory, postcolonial theory, gender and queer theory, immigration, class and labor movements, and intersectional feminism. Asian American studies-as broad and diverse as the racial group it describes-provides a framework through which we may connect history, culture, private and political life, and structures of inequality. How do politicized subjects construct and express their desires, resist power, and transcend geographic, ideological, and psychological borders? We will traverse scholarly and sociological texts as we bolster our critical analysis of literature (fiction, nonfiction, poetry, graphic novel, science fiction) and media (film, television, Internet art). In this interdisciplinary course, we will examine the body as a site of politics, intimacies, desires,

transformation, survival, and resistance. Students should expect to spend approx. \$50 on required books.

Description

Walking Places: Pedestrian Activity and Spatial Politics

"A walk can exist like an invisible object in a complex world."
?Hamish Fulton

Walter Benjamin famously reflected on the architectural spaces of Paris through the figure of the flaneur, a meandering literary figure who experienced the city as an unfinished text. Drawing on the poetry of Baudelaire and influencing subsequent generations of writers and artists, Benjamin understood walking as a key component in the development of a critical and poetic relationship to the city of the past and the present. With reference to historical and theoretical texts and contemporary art, literature and film, *Walking Places* explores the space of contemporary landscapes from a pedestrian perspective. Through textual analysis and experiential practice, this class relates walking, the organization of space and cities, ideas about technology and aesthetic practice.

Each week, students will take excursions on foot either individually or in organized class meetings and reflect on these walks in their journals. Journal entries will contextualize these walking exercises in relation to specific course readings, using various historical and theoretical texts as framing devices. A final research project is also required.

Description

The traditions of open-source culture rooted in hacker and cyberfeminist history encourage developers and users to fork public codes and contribute to building the internet that we face in our daily lives, either via modification or redistribution. The contemporary user experience of the internet primarily revolves around filling in the web infrastructures with personal content that preserves nothing but one's obsession with the self. That's because Silicon Valley Corporations, too, felt encouraged to join the open-source culture in the early 80s. They hired in-house developers to, once they fork the public codes, erase the author's credits and make the code private, so that they can sell it back to the users in the form of User Experience accompanied by their company logo. In his book *The Cathedral and the Bazaar*, Eric S. Raymond claims that this was the time when the term "hacker" started having a bad connotation and referred to computer vandals -- an abuse that continues to this day in order to protect the corporate definition of an average user. Shortly after, the cyberfeminist self-published interfaces were escorted out of the internet's 'homepage' -- the Google Search. Since then, the distinction between developers and users remains sharp even though corporate developing methods never got divorced from the traditional open-source methods. With the rise of AI technologies, the historical reference to hackers and cyberfeminists is becoming more distant from the user who is now becoming a command developer, pulling the codes from the libraries curated by corporations.

In this course, we will explore the coding strategies from a hacker and a cyberfeminist perspective in order to develop and publish perfect forgeries of our favorite, institutional platforms and populate them with content that works in our favor, not theirs. You could be a US immigrant required to provide evidence to the state that you've achieved national/international recognition as part of your O-1B Visa -- in which case you'd make a forgery of an e-flux article page and populate it with the transcribed interview about your project which never happened. You could need to elevate your public persona -- in which case you'd make a forgery of Kim Kardashian's Instagram page and populate it with AI-generated images of you two hanging out together. You could have lost a court case for no reason -- in which case you'd re-open the case and build documents to object to the court decision. The options to make web forgeries work in our favor are endless.

To set the critical and theoretical ground, we will explore the key essays from the cyberfeminist and hacker history. Ideally, the websites made during the course will stay in the course and become a memory during which we reflect on contemporary forms of urgent publishing, state of the internet, and role of the user.

Description

This winter session course offers an opportunity for students to join a creative weeklong crash course in the history, politics, and activism of Palestine that preceded the violence of October 7th and the unfolding humanitarian crisis in the current war on Gaza. Through films, readings, art work, music, religious texts, and food we will gain context and understanding of the diverse people who inhabit the land between the Jordan River and the Mediterranean Sea and why it has become a site of such violence and conflict. The class will define and critically engage some of the terms that have become central to understanding the situation of Palestinians: nakba, Zionism, settler colonialism, apartheid, ethnonationalism, sovereignty, statehood, occupation, genocide, terrorism, intifada, war profiteering, and the security state. We will explore the connection between Palestine and other decolonial, indigenous rights, anti-apartheid, and abolition movements around the world. In a time when academic and artistic freedom are under threat and islamophobia and anti-semitism are on the rise, we will reflect on how we as artists on a college campus can individually and collectively affect social change.

The week-long (.5 unit) course will be team-taught by faculty from Critical Studies and guest artists. Throughout the course we will create and uphold community guidelines that ensure the space for all members of the class to be learners and to ask questions. We will insist that students show patience and tolerance for hearing ideas they may disagree with and maintain the class as a space for all to learn and increase their understanding of a deeply complex and longstanding conflict.

Description

Black/Queer/Black: A Survey of Pop Culture's Fiercest Tributary

This course is a close study of the multi-layered Black queer center of '80s and '90s House music culture via literature, film, music, music videos, and critical essays by the likes of bell hooks, Sarah Schulman, Essex Hemphill, Pamela Sneed, and more. We will dive into the conversations (shared influences; similar and oppositional politics) of House music of the '80s and '90s, and hip-hop(mainstream and alternative) from that same time, excavate the political subtexts in the artifacts (music, music videos, films) of House culture, and examine contemporary elements of modern pop culture (particularly music and music videos) and locate the influence of '80s and '90s House

culture. By examining the relationship between '80s and '90s Black/queer poetry, literature and academic scholarship, and the everyday socio-political realities that shaped House culture, students will strengthen and develop trust in their own critical voice.

Description
This class will investigate sites of presumed stability located between landscape and architecture, looking to infrastructure to activate a number of questions related to climate change. How is the built environment shaped by water, power, waste disposal, communication and transportation systems? What social networks are given form through infrastructure and land use? How have artists employed infrastructure to make visible hidden relationships and power dynamics? We will investigate the complex technological systems that deliver basic services as a way to think about public space and to reflect creatively on the structures that shape our daily lives. Structured as a seminar, with readings and in-class discussion, the class will also involve field trips to a variety of locations in Santa Clarita associated with infrastructure. In addition, we will consider our broader

relationship to "place" and how it functions in the construction of social and political identities in relation to the climate crisis.

Description

This is a cross-disciplinary course exploring various histories and cultures in Latin America, focussing on diverse intersections between history, politics, social struggles, popular cultural practices and the arts. The course fosters awareness of the diversity of Latin American cultures and identities and the interface with the arts and expressions these have produced, including narrative, music, film, visual arts, hybrid religions and popular performance elements from Brazilian carnival to Cuban santería to the growing Mexican Santa Muerte cult and on to film, music and narrative. We also ask how signify for U.S. Latinos. The key terms implicit in "Latin American" are complex. The term "Hispanic" is used differently in Latin America and the U.S., and covers a great diversity of identity threads? Latino/a/@/x, Chicano/a, Central American and speakers of indigenous Amerindian languages from Mexico and Central America. The complexity of the idea of "Latin America" is suggested by possibly surprising features, for example: (i) the Caribbean is a separate zone of colonial and post-colonial intersections; (ii) the Aztecs are emblematic of Mexican pre-Columbian civilization but are actually a late factor in the seminal cultural history of Meso-America; (iii) the situation of women varies vastly per region and situation; (iv) the term "Latino," while considered more progressive and racially eclectic than "Hispanic," is probably just as Eurocentric; etc. In short, the details of cultural history usually belie the standard concepts. The course has three phases. We begin with the historical background (basic politics and economics), languages, climates and demographics, then examine various social currents and meanings through traditional popular artistic expression, then modern artistic expression including pop music, cinema and "magical realism," then consider the circulation of ethnically self-aware identities in

"Latino USA" with particular attention to Californian veins including drama, cartoons, music and critical writings on contemporary Latino art and identity.

Description

The most popular tools for building a website require zero to minimal coding knowledge. Dragged and dropped content in the colorful back-ends is published on the website's front-end in no time. All you have to do is click Publish. But this web design automation puts us far from questioning the software logic and the rules of the language these tools root from. The last 30 years of Cyberfeminism can teach us that vibrant cultures and certain political situations can be read through the interfaces that shaped today's internet. The most enlightening era of the 1990s was when the first online collectives were formed, hypertext and literature were merged, default binaries within the programming languages were questioned, and wild personal interfaces ("online graffiti art") were massively self-published. In the early 2000s, however, social media platforms pushed these examples to the bottom of the search results, further fading them out of our user imagination and memory. In this class, we will unearth the tools that were used to build cyberfeminist and social media platforms. To deploy new web logics, methods, and aesthetics with the same digital technologies, we will gain basic coding skills, explore the syntax of traditional web development, and dive into the works of Cyberfeminism History. As a result of our knowledge, we will build critical websites and collectively design + deploy a digital archive as a proposal for the new internet.

Description

Pursuing Happiness: From Buddha to Positive Psychology
From a self-help craze to government funded scientific research, the pursuit of happiness has become a 'hot topic' in both popular culture and multiple fields of social science inquiry and research. The "Science of Well-being" incorporates happiness research in many areas including economics, behavioral studies, and positive psychology (the study of positive emotions, positive experiences, character strengths, and the practices that facilitate their development).

In this course we will research and analyze varied perspectives on happiness from some of the major theorists in these fields highlighting concepts such as gratitude, optimism, mindfulness, resilience, and creativity. We will also engage in experiential learning and practical exercises to increase well-being as a means of understanding both the theories and ourselves.

We will critically explore and evaluate the roots of the so-called "Science of Well-being" in Greek philosophy and Eastern religions as well as within the current atmosphere of commercialization and commodification of happiness as a fashionable trend.

Description

Environmental Justice, Activism, and Reimagining the World
Together, we will learn terms and concepts central to environmental justice and activism. What is the anthropocene and how is it different from what theorists are calling the capitalocene? What might sustainability look like and how can it be fostered in your community? How can political organizing confront unequal power systems that jeopardize the air we breathe, the water we drink, the land we live on?

Description

Collective memory (as well as collective forgetting or repression) is essential to understanding urban culture and politics. By journeying through various cities, we identify how literature, cinema, urban planning, politics, and the rhythms of everyday life can be excavated. Among cities to be discussed: Los Angeles, Jerusalem, Berlin, Paris, Shanghai, New York, Beijing, Rome, Las Vegas, Naples. Each of these has a collective myth beyond its history. But these myths center around districts that have been endlessly retrofitted. In the shadow of famous monuments, the residents adapt to layers of erasure, failed infrastructure, foreign and domestic conquests, waves of immigration. Through the filter of media in particular, we investigate how these urban-industrial folk images have evolved; and where cities are headed next. For example, we will study techniques for "unreliable narrators" in variations of noir (1928-58; and neo-noir after 1970)-- as well as archival fact and fiction across various genres. We will also decode how the ambient, expressionist setting is developed-- in cityscapes and in fictions. Students then apply these discoveries to final projects involving research into how the facts of a city are cannibalized as social imaginaries, from memoirs to archives to journalism, to scripted spaces.

Description

Deconstructing the Police
This seminar examines the origins, evolution and ideas about policing. We consider theories, perspectives and critiques of policing including those that consider policing to be disciplinary power, as an apparatus of class rule, a white supremacist instrument, as democratic institution etc. We ask where do the police come from? What do they do?? Whose interests do they serve? Why do they dress like that? How are they or might they be legitimized? Why might they be necessary? Why might they be abolished? What is the relationship between the "extrajudicial," the lynch mob and the police? What accounts for the apparent tension between policing, gender, race and class? Is policing an inherently anti-Black institution? We will look at struggles against police power and confinement, the writings of police critics such as Louis Althusser, Michael Foucault, Karl Marx, Frantz Fanon, Ida B. Wells, Angela Davis, Black Panther Party members and Mark Neocleous, as well as consider editorials, film, and political tracts from the late nineteenth century, and Black music and literature in an attempt to (theoretically) deconstruct the police.

Description

"How is information used as a tool of oppression?" is this course's motivating question.

This class uses an intersectional feminist perspective to question the values of transparency, access, and spectatorship embedded in surveillance aesthetics. It will highlight the gaze, the body, mapping, games, and others as sites of contestation and intervention.

This questioning will include readings on historical examples of surveillance technologies, such as Michel Foucault's study of Jeremy Bentham's model for the panopticon prison, Tina Campt's writing on the mugshots of the Freedom Riders, and others. We will read pieces by contemporary theorists such as Simone Browne, Hito Streyel, and the Feminist Surveillance Studies collection.

It will also include film screenings, such as Harun Farocki's Prison Images and Michael Kiler's The Giant. Moreover, it will consider artists whose creative practice includes surveillance, such as Hank Willis Thomas, Julia Scher, Andrea

Blum, Margia Kramer, Blaise Tobia, Ernie Gehr, Xiuzhen Yin, Natalie Bookchin, Peili Zhang, and Peter Campus.

Description

Archeologies of the Present. Open to BFA-4 students.
A seminar that studies the past fifty years-- how culture meets politic; including our historical crises and economic changes. The history of our present crisis begins essentially in 1973, with massive shifts in the role of the nation state, in the changing structure of media and tech in the seventies and eighties, even in the "medication" industries (from seventies Prozac to today); clearly in the restructuring of cities, especially since the nineties; and most of all, in the fragile aspects of digital capitalism (that inspires piracies and artificial dis-intelligence). All these have altered the audience (how people read culture), altered narrative forms; while gig labor conditions destabilize further. Where do we position ourselves within this feudal condition? What is cultural progress in the face of evident American decay, in its ability to master plan since the end of Mid-Century Modernism-- toward the comic tragedy of Trumpismo; and beyond. How do artists assemble a solid plan? We study theories on oligarchical tendencies, and labor indenture. We examine its risks, even its potential. Does neo-feudalism spark new forms of narrative and cultural production? What other terms and methods say much the same thing, and can be used. Are we capable of a Renaissance, despite the cultural ruins after the end of modernism and the Western Hegemony (post 2000)? How can we build an honest arts culture within the dismantling of the American psyche? Clearly, there are powerful strategies forward,-- across the arts-- so we take into account past histories for comparison, even going back millennia; toward a future that is caught between worlds at the moment

Description
Parallel worlds: Fiction and Imaginary Futures, 1850-Present. Open to BFA-3, BFA-4 and Graduate students only. A workshop and discussion class on how to use tools broadly related to science-fiction "worlds"-- as in tales about parallel worlds tales, and in "immersive" fx cinema; also in myopias, grotesquerie, steam punk and gothic revivals; the body as a duplicated machine; the engineering of memory and identity (like the POV of doubles, automata, cyborgs, etc.). Parallel worlds are not only featured in science fiction; but also in "utopian" literature, in urban planning; caricature; animation; cinematic editing; industrial design; entertainment play spaces; architecture; in the parallel ideologies of social movements (as in the 1920's); in painting; theater; certainly in digital media. For 1850 onward, the impulse to grasp imaginary futures and imaginary tech was particularly fierce and complex. This contrasts oddly (deceptively) without dissolving century. The culture of "imaginary futures" has taken a very unusual turn since the collapse of postmodernism, essentially after 1989, more about a hollowing out of identity, about a horizontal mapping of globalization. Also recommended for Integrated Media students, and MA students in Aesthetics and Politics.

Description
Sounding Resistance in Indian Country
Throughout Turtle Island (present-day North America), songs have been an essential form of Indigenous expression for millennia. In fact, most activities in Native communities, from the gathering of traditional foods to social gatherings, are accompanied by songs. Despite the efforts of missionaries and government agencies to eradicate all forms of Indigenous expression, including language, ceremonies, and songs, Indigenous cultural traditions persisted and Native American music, rather than retreating into relative obscurity, became a critical conduit for resistance in the post-European contact era.

Focusing on contemporary Native American music from the late-twentieth century to the present, this course will examine how it has fueled resistance to the ongoing colonial project. We will also focus on innovative and groundbreaking Native performers, composers, and musicians who have influenced multiple musical genres, from rock to jazz. While Sounding Resistance is firmly rooted in concepts and ideas that are inherently musical, course content will include material from the fields of Native American/Indigenous studies and ethnomusicology, providing a broader perspective on concepts such as resistance, resilience, and self-determination. In addition, Sounding Resistance will include visiting artists who are actively making music and performing throughout the present-day US.

Sounding Resistance in Indian Country will be a co-convened course between the Institute of American Indian Arts and California Institute of the Arts.

Description
MONSTRESS AESTHETICS, ASIAN VENGEANCE.
From the longstanding revenge concocted by the wrongly convicted teen girl of Park Chan-wook's Lady Vengeance (2005) to the "nightmare of a woman" in poet Dorothy Chan's Revenge of the Asian Woman, the desire for and cost of revenge haunts Asian women and femmes in poetry, prose, and film. In response to extreme and patterned racial and gender violence, vengeance becomes a motivating force for Asian women and femmes seeking justice when the state or systems in place cannot provide a reparative answer. Rather than debate the

morality of vengeance as a response to racial and gender violence, this course looks at the ways in which vengeance as affect moves, activates, agitates, and subverts notions of appropriateness, respectability, and other feminized values specifically attributed to Asian women and femmes.

We will look at text and media that dance between sardonic humor to blood, guts, and gore (it's revenge, after all). We will apply affect and critical race theory from Sianne Ngai and Ann Anlin Cheng to readings that may include Han Kang's *The Vegetarian*, Vivek Shraya's *Revenge of the Racoons*, Marjorie Liu's *Monstress*, Larissa Lai's *Salt Fish Girl*, Isabel Yap's *Never Have I Ever* alongside viewings of the acclaimed *Lady Vengeance* (2005), *Faster, Pussy Cat! Kill! Kill!* (1965) and the popular anime *Hell Girl* (otherwise known as *Jigoku Shoyo: Girl from Hell*). By the end of the class, students will make an art object and write a response to the question, "What does Asian women and femme vengeance look and feel like?" Not for the faint of heart.

Description
"From Uncle Tom to Colin Kaepernick: Representations of Black Supplication"
This course explores the history and contemporary uses of the figure of the supplicant Black man. It traces the figure's late 18th, early 19th century emergence through white abolitionist writings and colonial memoirs and contemporary artwork and discourse. Particular attention is paid to the influence of Josiah Wedgewood's "Am I Not a Man and a Brother" anti-slavery medallion and the characters of Jim in Twain's *Adventures of Huckleberry Finn* and Uncle Tom in Stowe's *Uncle Tom's Cabin*. We examine the influence of these and other depictions of Blackness on contemporary representations of Blackness, the "peaceful protest" and "Civil Rights," through the speeches of American politicians and performances by Black athletes. Students ask what purpose does the disarmed, vulnerable, pleading slave figure serve and how successful has it been in achieving change. Do representations of Black supplication reproduce the master-slave relationship? Is the appeal to sympathy effective in colonialism? We compare these figures of supplication to the reality of Black anti-colonial revolt.

Description
Algorithms, Enclosures: Digital Infrastructure and the Technological Imagination

This class will investigate the increasingly interconnected digital networks that shape and reshape the global economy. Considering the material, ecological and political implications of this evolving technological system, we will seek to understand both how digital infrastructures actually work on a technical level and uncover the cultural assumptions surrounding networks. What political and social networks are given form through digital infrastructures? How are artists visualizing and mapping the infrastructure of the internet to make visible hidden relationships and power dynamics? We will investigate increasingly complex global technological systems as a way to

think about notions of the public, spatiality and labor. Structured as a seminar, with readings and in-class discussion, the class will also involve field trips to locations associated with digital infrastructures. In addition, we will consider the broader question the commons and how the liberating promise of the internet and networks have so often delivered novel and not so novel forms of enclosure.

Description

Social Reproduction:

Gender, Race and Care under Capitalism

In the writings of Marx, the term 'social reproduction' refers to the ways that the capitalist system reproduces itself as a whole. In this class, we will consider a rich body of literature that departs from a framework that understands the realm of labor and commodities as the primary arena where the economy reproduces itself. In complex and diverse ways, theories of social reproduction look towards race, gender, sexuality as well as the domestic and leisure spheres as fundamental sites that produce the granular, lived experience and as such, create the conditions for the ongoing reproduction of the global economic system. Beginning with feminist and anti-colonial critiques of traditional Marxism, the course will include readings and analysis to consider how childcare, healthcare, education, family life and the roles of gender, race and sexuality constitute forms of life under capitalism. Students will write short weekly reflection pieces and complete a substantial research project.

Description

Deconstructing the Police

This seminar examines the origins, evolution and ideas about policing. We consider theories, perspectives and critiques of policing including those that consider policing to be disciplinary power, as an apparatus of class rule, a white supremacist instrument, as democratic institution etc. We ask where do the police come from? What do they do?? Whose interests do they serve? Why do they dress like that? How are they or might they be legitimized? Why might they be necessary? Why might they be abolished? What is the relationship between the "extrajudicial," the lynch mob and the police? What accounts for the apparent tension between policing, gender, race and class? Is policing an inherently anti-Black institution? We will look at struggles against police power and confinement, the writings of police critics such as Louis Althusser, Michael Foucault, Karl Marx, Frantz Fanon, Ida B. Wells, Angela Davis, Black Panther Party members and Mark Neocleous, as well as consider editorials, film, and political tracts from the late nineteenth century, and Black music and literature in an attempt to (theoretically) deconstruct the police.

Description

The traditions of open-source culture rooted in hacker and cyberfeminist history encourage developers and users to fork public codes and contribute to building the internet that we face in our daily lives, either via modification or redistribution. The contemporary user experience of the internet primarily revolves around filling in the web infrastructures with personal content that preserves nothing but one's obsession with the self. That's because Silicon Valley Corporations, too, felt encouraged to join the open-source culture in the early 80s. They hired in-house developers to, once they fork the public codes, erase the author's credits and make the code private, so that they can sell it back to the users in the form of User Experience accompanied by their company logo. In his book *The Cathedral and the Bazaar*, Eric S. Raymond claims that this was the time when the term "hacker" started having a bad connotation and referred to computer vandals -- an abuse

that continues to this day in order to protect the corporate definition of an average user. Shortly after, the cyberfeminist self-published interfaces were escorted out of the internet's 'homepage' -- the Google Search. Since then, the distinction between developers and users remains sharp even though corporate developing methods never got divorced from the traditional open-source methods. With the rise of AI technologies, the historical reference to hackers and cyberfeminists is becoming more distant from the user who is now becoming a command developer, pulling the codes from the libraries curated by corporations.

In this course, we will explore the coding strategies from a hacker and a cyberfeminist perspective in order to develop and publish perfect forgeries of our favorite, institutional platforms and populate them with content that works in our favor, not theirs. You could be a US immigrant required to provide evidence to the state that you've achieved national/international recognition as part of your O-1B Visa -- in which case you'd make a forgery of an e-flux article page and populate it with the transcribed interview about your project which never happened. You could need to elevate your public persona -- in which case you'd make a forgery of Kim Kardashian's Instagram page and populate it with AI-generated images of you two hanging out together. You could have lost a court case for no reason -- in which case you'd re-open the case and build documents to object to the court decision. The options to make web forgeries work in our favor are endless.

To set the critical and theoretical ground, we will explore the key essays from the cyberfeminist and hacker history. Ideally, the websites made during the course will stay in the course and become a memory during which we reflect on contemporary forms of urgent publishing, state of the internet, and role of the user.

Description
This winter session course offers an opportunity for students to join a creative weeklong crash course in the history, politics, and activism of Palestine that preceded the violence of October 7th and the unfolding humanitarian crisis in the current war on Gaza. Through films, readings, art work, music, religious texts, and food we will gain context and understanding of the diverse people who inhabit the land between the Jordan River and the Mediterranean Sea and why it has become a site of such violence and conflict. The class will define and critically engage some of the terms that have become central to understanding the situation of Palestinians: nakba, Zionism, settler colonialism, apartheid, ethnonationalism, sovereignty, statehood, occupation, genocide, terrorism, intifada, war profiteering, and the security state. We will explore the connection between Palestine and other decolonial, indigenous rights, anti-apartheid, and abolition movements around the world. In a time when academic and artistic freedom are under threat and islamophobia and anti-semitism are on the rise, we will reflect on how we as artists on a college campus can individually and collectively affect social change.

The week-long (.5 unit) course will be team-taught by faculty from Critical Studies and guest artists. Throughout the course we will create and uphold community guidelines that ensure the space for all members of the class to be learners and to ask questions. We will insist that students show patience and tolerance for hearing ideas they may disagree with and maintain the class as a space for all to learn and increase their understanding of a deeply complex and longstanding conflict.

Description

Algorithms, Enclosures: Digital Infrastructure and the Technological Imagination

This class will investigate the increasingly interconnected digital networks that shape and reshape the global economy. Considering the material, ecological and political implications of this evolving technological system, we will seek to understand both how digital infrastructures actually work on a technical level and uncover the cultural assumptions surrounding networks. What political and social networks are given form through digital infrastructures? How are artists visualizing and mapping the infrastructure of the internet to make visible hidden relationships and power dynamics? We will investigate increasingly complex global technological systems as a way to think about notions of the public, spatiality and labor. Structured as a seminar, with readings and in-class discussion, the class will also involve field trips to locations associated with digital infrastructures. In addition, we will consider the broader question the commons and how the liberating promise of the internet and networks have so often delivered novel and not so novel forms of enclosure.

Description

Social Reproduction:

Gender, Race and Care under Capitalism

In the writings of Marx, the term 'social reproduction' refers to the ways that the capitalist system reproduces itself as a whole. In this class, we will consider a rich body of literature that departs from a framework that understands the realm of labor and commodities as the primary arena where the economy reproduces itself. In complex and diverse ways, theories of social reproduction look towards race, gender, sexuality as well as the domestic and leisure spheres as fundamental sites that produce the granular, lived experience and as such, create the conditions for the ongoing reproduction of the global economic system.

Beginning with feminist and anti-colonial critiques of traditional Marxism, the course will include readings and analysis to consider how childcare, healthcare, education, family life and the roles of gender, race and sexuality constitute forms of life under capitalism. Students will write short weekly reflection pieces and complete a substantial research project.

Description

Feminist Poetics

Special Topics course for BFA-1 students only.

Through the lens of feminist poetics, we will explore how writers and artists navigate relationships between writing, identity, culture, politics, and art making in their work. We will ask, how might feminist poetics offer strategies for envisioning and re-visioning language use, form, genre, and ideas? How are feminist poetics modes of critique, desire, invention, research, inquiry, and imaginative praxis? How have writers and artists taken up feminist poetics to create visions of resistance and transformation?

Together, we will read poems, prose, essays, statements of poetics, prompts, provocations, and interviews. We'll also listen to podcasts, watch videos, and hear from guests who share about their work and commitments. Our class spirit is generative and collaborative. It invites process, inquiry and reflection. As a Level-100 Special Topics course, you will participate in weekly writing workshops related to the course material. The workshops and writing assignments are opportunities to build writing skills and confidence, explore different writing methods and strategies, and compose critical-creative papers and poetic pieces that explore your thinking about course texts and ideas. Writing workshops are a central component of our class where students share their own writing and respond to their peers' work.

Description

Special Topics course for BFA-1 students only by permission of instructor.

In this course we will read, analyze and write about fiction that reaches beyond the human for its narrators, characters, plots and preoccupations. How do these stories, which center on animal, insect, plant or artificial life, de-center humans and the very concept of the human? How do they de-naturalize Nature? What alternative ways of being in the world do they

suggest to us? Some key concepts guiding our discussion will be anthropomorphism, zoomorphism, posthumanism and ecofiction.

Description
This course offers an immersive introduction into the history and thinking of anticolonial practice through an in-depth engagement with Frantz Fanon's *The Wretched of the Earth*, one of the most influential works in anticolonial thought. Fanon, a Martinique-born psychoanalyst joined the anti-colonial struggle against French colonialism in Algeria and diagnosed the relationship between the colonized and colonizer. This work inspired members of the Black Panther Party, anti-racist movements in the US as well as anti-colonial and anti-imperialist movements across the world. Influential political thinker Angela Davis names it as one of six books everyone should read. Spending the bulk of the semester close reading this text, we will not simply "do the readings"; instead, students will be taught to spend extended time with the text, examining it from multiple angles and responding critically to its arguments. We will also read Fanon's influence in contemporary Hip Hop, Black radical writing, global anti-colonial political movements and activist organizing.

This course introduces students to an anticolonial lens on modern history--with accounts of major world events that diverge starkly from the Eurocentric versions that typically dominate both academic and popular tellings. Fanon's text will serve as a springboard to discuss the psychological, social, and political impacts of colonialism, violence, and liberation struggles in the colonized world. By the end of the course, students will not only be familiar with the canonical significance of *The Wretched of the Earth* but will also explore the relationship of Fanon's ideas to the (neo-)colonial present.

Through rigorous analysis, the class will train students to dissect language, explore subtext, question assumptions, and make active use of the text's ideas in their own artistic practice and intellectual and political work, and weekly writing workshops will guide students in the relationship between critical reading and critical writing practices.

Digging Up California

Subject Code Course Number
CHMN 208

School(s)
School of Critical Studies

Academic Level
UG - Undergraduate

Credit Hours

Min Credit Hours:
3

Description
What does it mean for a place to continually be dug up by people, natural forces, and myth? How can we use what we dig up in California such as history and topography to craft familiar and not so familiar narratives? This class will examine how these narratives can transform the landscape, people, and history of California and how California shapes it all back. From the iconic literature of Hollywood from Joan Didion, writings of Angela Morales growing up in Los Angeles, to an intimate film about gentrification in San Francisco by Joe Talbot, this course will examine how to reshape narrative within a place that is always reshaping itself out of forgotten memory and the not-so-far-away buried past. This course will also examine the essentials of a Californian city. Each student will write an essay examining a past incident in California and where the traces of it are seen now, and an essay that examines the use of the past in a literary work we read and discussed in class. By the end of the course, each student will use both essays to craft a creative piece grounded in some form of text in response to their research and careful examinations of place within California.

Description
What is Called "Thinking"? Materiality, Asbtraction, Expression
In this course we propose to interrogate how different modes of cultural production across human history explore the relation between thinking and materiality, and by extension the place of the human subject in the order of nature. Across the history of philosophy, science, and the

arts, various ways to articulate mind and world have been elaborated, across a variety of forms and mediums: from narratives which place thought beyond the realm of material becoming (idealism), to reductionist attempts which attempt to inscribe thinking within the natural order (materialism), to intermediate positions which describe cognition as suspended between a material and immaterial dimension (dualism). Beginning with a brief excursus into the Greek philosophical world and its attempt to separate the domain of ideas from the material world disclosed to the senses, and passing through the history of modernity until the contemporary day, we will assess a wide variety of philosophical and literary texts, as well as exemplars in from the history film, in which the role and nature of thinking becomes progressively problematized, looking at works by Rene Descartes, Immanuel Kant, Fyodor Dostoyevsky, Emily Dickinson, Martin Heidegger, Cesar Vallejo, Sadie Plant, Danielle Macbeth, Andrei Tarkovsky, David Lynch, and Lars von Trier, among others.

In particular, we shall interrogate how thinking has been understood simultaneously as a means for abstraction, pulling the human apart from the 'here-and-now' by opening new modes of theoretical speculation and rational cognition, but also as the lever toward new forms of expression, forging new practical possibilities for intervening upon the world. Among the questions we shall interrogate are: to what extent are the rational and expressive dimensions of thought at once in tension and yet complimentary with each other; is thinking an obstacle which prevents action, or rather the enabling condition for action? Does thinking position the human in an exceptional position with respect to the rest of the natural order, or does such exceptionalism elide the continuity between mankind and the rest of nature? How are theoretical scientific and philosophical modes of thought coordinated to different modalities of artistic and political practice? If thinking is itself to be understood as a kind of practice, related to the development of techniques for abstraction, then is aesthetic expression necessarily rationally bound?

CHMN219W - Quilting

General

Course Long Title
Quilting

Subject Code Course Number
CHMN 219W

School(s)
School of Critical Studies

Academic Level
UG - Undergraduate

Credit Hours

Min Credit Hours:
0.5

Description

We will look into the quintessentially U.S. American tradition of quilting, looking at historical examples and particular artists, such as the AIDS quilt, Gee's Bend, Faith Ringgold, among others. We will visit the Huntington Library, Museum and Gardens, particularly to view the Gee's Bend: Shared Legacy exhibit on display at the Scott Gallery for American Art, the traditional 18th century quilts, and the Kehinde Wiley Blue Boy painting. There will be creative/critical writing prompts throughout that engage quilting as visual art, as collective practice, and as language.

The Huntington visit will take place at the end of the first week of the winter session. If you take the course during the second week, you will visit the Huntington on the first week of winter session as a first session of the class, so the first week students and the second week students will have the group visit together.

A final reflection on the course (2-3 pages), inviting a writing that engages quilting will be submitted at the end of the class. This reflection can be an expansion from one of the writing prompts engaged with during the class, or something different. As part of it, students will respond to at least two pieces or artists of their choice.

Academic Level
UG - Undergraduate

Credit Hours

Min Credit Hours:
3

Description

The Art of Games: The Philosophy of Games and Game Design.
Games look to be the dominant art form of the 21st century. From an economic perspective, the video game industry is now larger than both films and music combined, and there is a large segment of the population for whom such games are their primary pastime. But beyond video games, there has been an explosion of interest in tabletop gaming, from pen and paper roleplaying games inspired by Dungeons and Dragons, to wargames and boardgames that experiment with a vast range of themes and mechanics. However, though games have achieved a sort of cultural hegemony, they remain under-explored by philosophers and art theorists,

who prefer to use the vocabulary of 'play' to describe more perennial practices and mediums.

The purpose of this course is correct this oversight: first by engaging with the philosophical problem of defining what games are; and second by exploring the wider aesthetic possibilities of what games can be. On the one hand, we will trace the history of the problem of defining the concept of game, from Huizinga to the present day, and on the other, we will examine several important developments in game design, focusing on technical and artistic aspects of tabletop games. However, we can only learn so much about games by talking about them, so we will also play tabletop games throughout the course, and eventually work in groups to design some.

Course Long Title

What Is Philosophy?

Subject Code	Course Number
CHMN	231

School(s)
School of Critical Studies

Academic Level
UG - Undergraduate

Credit Hours

Min Credit Hours:
3

Description

An introductory course in philosophical methods as well as contemporary issues.

Philosophy is both an historical product of the Western tradition and a critical tool of inquiry that changes over time and within different contexts. This course will be concerned with introducing students to the foundations of philosophy and exposing them to key issues addressed in philosophy. The course is divided into three main sections, each engaging with a different aspect of the discourse.

The first section will focus on the questions: How do we define philosophy? What constitutes philosophical thinking? Does philosophical inquiry (e.g. inquiry into rationality or logic) differ from knowledge in general? How can philosophy be defined in terms of its 'function' and 'reason'?

In the second section of the course we will examine how philosophy defines some of its key problems, such as solipsism, objectivity, the mind-body problem, free will, moral and aesthetic judgments and other topics. In the third section, we will examine philosophical positions such as empiricism, idealism, positivism, relativism and pragmatism.

All the required readings are in the book and/or will be given as handouts. A student must not miss more than three classes without a medical note. There will be a class assignment, a mid-term paper

and a final paper.

Main text: Thinking it Through: An Introduction to Contemporary Philosophy by Kwame Anthony Appiah.

Description

Say It Loud: The Rhetoric of American Social Movements

This course examines the rhetorical strategies of twentieth century American social movements: the speeches, manifestos, essays, graphics, films and music that helped shift the terms of political debate and cultural understanding in favor of previously subordinated peoples. Taking two manifestos as our touchstones: the Declaration of Independence and the Communist Manifesto, we will analyze rhetorical documents from the Labor Movement, the Civil Rights Movement, Black Power, the American Indian Movement, the Women's Movement, the Anti-War Movement, the Environmental Movement, the movement for LGBTQ rights, the Anti-Globalization Movement, the Occupy Movement and the new Student Movement. Along the way, students will generate their own manifestoes, perform rhetorical analyses and invent new ways of intervening in contemporary social conflicts.

Academic Level
UG - Undergraduate

Credit Hours

Min Credit Hours:
3

Description

In her book, *Living a Feminist Life*, Sara Ahmed writes, "Feminism as a collective movement is made out of how we are moved to become feminists in dialogue with others." In this spirit, we will think of our class as a conversation with one another, and with feminist theories and practices. What can we continue to learn from feminist histories? How can we use feminist practices for social and political change? And importantly, might feminism inform your practices as artists?

Our study of U.S. and transnational feminisms will explore a history of ideas central to feminism and identify how the ideas are present in current discourse, debates, and politics. We will use an intersectional approach that takes gender, sexuality, race, ethnicity, nationality, citizenship and ability as its starting point. We will ask questions about identity, language and culture for how they can be sites of resistance and transformation.

Together, we will read critical theory, manifestos, zines, essays, prose and poetry. In addition, we will look to film, performance and music to see how artists are engaging feminist ideas and critique in their work. Our methods of inquiry will include feminist practices as we circle in consciousness raising groups, make zines, write collaborative tracts, perform textual and artistic interventions and develop new projects that carry forth a vision to build a better world.

Description

This course surveys Black women's autobiographical archival work and writing throughout the diaspora. We'll survey how Black women artists, writers, and performers have responded to the erasure of black women's identities and experiences throughout the globe, with particular focus on their chosen tools of artistic engagement. We'll also observe how Black women

negotiate with the failure of Black counter-historical projects namely the task of writing "about a history that is this encounter with nothing; or writ[ing] about a past that has been obliterated so that even traces aren't left." Throughout the semester we'll ask questions such as: How do these projects create new meanings of failure? How does failure become perhaps a new necessity for engaging with the archive and counter-historical endeavors? How do these projects proffer dynamic and risky ways of articulating the self through the archive? How do they navigate between the personal and collective in the context of black women's identities? How do they necessitate understandings of Black women's identities? How do they offer interesting ways of re-contextualizing archival spaces, moments, encounters, and feelings? To thoroughly engage with literary work from Saidiya Hartman, Dionne Brand, Alexis Pauline Gumbs, and Hazel Carby, we'll read them alongside criticism from theorists such as Barnor Hesse, Trinh T. Minh Ha, Antoinette Burton, and Christina Sharpe, alongside the work of visual/performance artists Robbie McCauley, Phoebe Boswell, Rosana Paulino, Kameelah Janan Rasheed, Zanele Muholi, and others.

The Attractions of Modern Horror

Subject Code	Course Number
CHMN	277

School(s)
School of Critical Studies

Academic Level
UG - Undergraduate

Credit Hours

Min Credit Hours:
3

Description

Taking inspiration from Fred Botting's notion of "the Disneygothic", this course will examine the transformations of Horror and Gothicism as they've saturated American markets, defined identities, and remixed transgressive, and at times status-quo, politics. Through screenings, presentations, discussions, readings, and visiting lecturers, Disneygothic will approach the histories of Horror film, literature, and art, both as mass-market phenomena and niche

subcultural material. We will question what, besides simply fear, draws us to Horror. Students will compare the Horror of today with precedents such as: Poe's House of Usher, Lang's Metropolis, Benjamin Christensen's Hæxan, Carter's feminist fairy tales, and Jewell Gomez' Afrofuturist vampires. We'll review CalArts Horror history from Tim Burton's rise to our very own labyrinth of The Main Building. We'll discuss Shelley's Frankenstein and its media legacy, Shirley Jackson's parallel practice of horror and comedy, and the seeds of today's Black Horror since Blacula's fight for studio funding right up to the last half-decade with Jordan Peele's game-changing endeavors in the form. We'll focus on how and why Horror is different today. What is finally out in the open, and what remains repressed? How did the transgressions of clandestine woman authors shape this genre, and how can Horror tell non-extractive stories about race? Is Horror still used as a hegemonic and colonial resource? What changes when Horror migrates from fan-scene to the mainstream?

Disneygothic can be thought of as a survey featuring projects in writing, art, and community engagement. We will critically address the proliferation Horror ploys, such as theme park rides, theater gimmicks, tie-in merchandise, endless sequels, reality TV, True Crime podcasts, Final Girl Mania, Prestige Television, and the genericizing of holidays and marginalized faiths. Students will maintain a Disneygothic Archive of contemporary Horror tropes, media, or art (scary or not) from day-to-day life, on which we'll base weekly discussions. The course is structured to be especially accessible to all métiers; we will approach film, music, fashion, architecture, writing, and more, to be determined by student interest. Disneygothic is explicitly not a course about the grizzliest or most extreme Horror, but it will include some depictions of violence.

3

Description

Argentine writer Jorge Luis Borges was an author widely but wrongly regarded as a-political. Although he was not a political writer in the

conventional sense of the word, his texts nevertheless constantly engaged in the indirect interrogation of our shared, political world. In this course, we will reveal the way in which most of his famous "fictions" were a massive attempt to respond to the politics of his time-the advent of fascism and totalitarianism-and thus will help us interrogate "the political" in its most complex manifestations: the question of political forms, the question of the institution of the new in historical time, and the question of alterity. As we are witnessing during these turbulent times, anti-Fascists come in different forms and shapes. Small "d" democrats, anarchists, Marxists, and libertarians from all parts of the world experience their confrontation with fascism as the defining moment of their lives. Not everyone, however, managed to become one of the most original and influential twentieth century authors because of such confrontation. This seminar will thus offer a multilayered political reading of Borges' fiction and non-fiction writings. Our first approach to his writings will be concerned with his non-fiction critique of Nazism in Europe and Latin America. During the rest of the semester, we will structure the course as an exploration of the theoretical implications of Borges' "detour of fiction," and we will do so by diving into three conceptual aesthetico-political dichotomies that his writings will help us interrogate: that of chaos and cosmos, the imaginary and the real, and the same and the Other. While doing this, the course will also engage his different stories and essays from the perspective of a few modern and contemporary thinkers and critics. We will analyze, with the help of Argentine cultural critique Beatriz Sarlo and French political and social theorist Claude Lefort, Borges's unique way of intertwining his fiction writing with his investigation of political forms.

Description
UNGOVERNABLE SUBJECTS: POETRY AGAINST THE STATE. "The master's tools will never dismantle the master's house," argues Audre Lorde, a provocation that still reverberates even now, inviting us to critique our relationship to power, the state, and the institutions that bind us to the two. In a time of persistent military occupation, settlerism, and other state sanctioned violence transpiring worldwide,

what tools will free us from the powers that we are bound to? This course will look at the ways in which poetry can be one such tool of political interrogation and creative exercise. From Claudia Rankine's examination of the police state through the aggregate of racial microaggressions against her as a Black woman in Citizen: An American Lyric to Solmaz Sharif's dive into the dual vocabularies of violence and tenderness in the U.S. Defense Department's official dictionary, we will engage with and write in response to poetry and theories that expose the capacity of language to harm and liberate us.

Throughout this course, students will write responses to three "obstructions," writing prompts that invite students to think along the lines of political actions that disrupt business as usual - shutting down freeways, sit-ins, protesting outside of electoral events. This means writing poems that obstruct public life, drawing attention to the political issues that matter, through public recitation, distribution of poems in printed format, visual performance, etc. For the final project, students will attend an action or community organizing meeting related to a political issue of their choosing and produce a written response that answers the question: How can my body become a vehicle for change through poetry?

Description
Introduction to Ethics - Spinoza, Kant - An Experimental Moral perspective (introductory/intermediate levels):

This class is a review of key philosophical issues in ethics and meta-ethics in both historical and conceptual perspectives. Starting with Plato and Aristotle and moving to Spinoza and Kant, the course examines ethical questions by contrasting traditional analysis of moral categories with more current approaches of both phenomenological approach and Experimental Moral Philosophy. Questions concerning judgments, normativity, essentialism, emotivism and naturalism in ethics are probed through an experimental approach that re-describes the psychological (first person perspective) through a philosophical grounding of epistemological 'internalism' through simulative psychological experiments.

Students should expect to spend approx. \$100 on books and supplies.

Description

This course proposes the notion of aesthetic exceptionalism to capture the widespread belief that art and artists are exceptional. The course will seek to challenge that belief in view of the political exceptionalisms that many in the art world would find dubious, and the economic exceptionalism that structures the art market. Engaging with sculpture, conceptual artwork, and painting by emerging and established artists, the course will draw on aesthetic and political philosophy to propose the radically democratic notion of unexceptional art as an antidote to the problems of aesthetic exceptionalism that it uncovers. Course readings will range from key texts in political philosophy (by Carl Schmitt, Bonnie Honig, Judith Butler, Chantal Mouffe) to readings in aesthetic theory (François Jullien, Bernard Stiegler, Byung-Chul Han) and will consider specifically Western thought's rootedness in exceptionalism. Course discussions will consider scandals related to aesthetic exceptionalism in the artworld (the recent Toporovski affair in Belgium) and will include at least one in-class visit by a Los Angeles-based artist.

Description

This course takes the figure of the public intellectual as central to the history of ethnic American experience, politics, and representation. How have the ongoing realities of American race relations placed particular political pressures on ethnic American writers? And how does an author's racialization change the stakes and status of the production, circulation, and distribution of their writing? Who is the ethnic writer's intended or implied audience? The course proceeds chronologically, starting with W.E.B. du Bois's essays, before moving onto the New York intellectuals (often Jewish writers whose ethnicity has only retroactively been domesticated as "white," such as Hannah Arendt and Lionel Trilling), followed by novelists James Baldwin's and Ralph Ellison's negotiation of 1960s black nationalism, before moving into the contemporary era of ethnic public intellectuals who increasingly write online, across multiple platforms, and often engage social media (Claudia Rankine, Christina Sharpe, Junot Diaz, Viet Thanh Nguyen, Teju Cole). Because many of these ethnic public intellectuals write both fiction and non-fiction, we will also juxtapose their literary works against their more theoretical writing.

Students will engage critical race theory and ethnic studies in two modes: not just as theoretical lenses through which to read texts, but also as primary texts themselves whose rhetorical practices often incite subsequent theoretical and institutional movements. As students examine racialized knowledge production as it occurs across different public mediums (newspapers, pamphlets, magazine, manifesto, podcasts, Twitter) and different genres (essay, interview, blogpost, tweet), they will also interrogate how different forms of intellectual labor intersect with questions of race.

Description

Anahuac's Ghosts: The Literature of America del Norte, 1524-2018

This interdisciplinary course will take us through a survey of fiction, poetry, theatre, film, testimony, and theory haunted by the myth of "Mexico." We will read texts from the period of the "Conquest" all the way to Trump's presidency, written north and south of the so-called Mexican-American border to critically investigate not just the history, but the historiography, of Mexico. Particularly, our conversations will return to the legacies of colonialism, imperialism, revolt, and migration and their effects on the formation of Mexico as a site of belonging, and the Mexican as a subject. We will ask: Who are the characters of Mexico's gendered and racial imaginary? What can we learn from Mexico's founding myths? How do terms like mestizaje, indigenismo, criollo/a, la raza, lo mexicano, or the "post-Mexican condition" clarify and complicate our idea of what it means to be "Mexican?" When answering these and other questions, we will return to representations of death, ghosts, and hauntings-a "Mexican" cliché, if there ever was one-to analyze the reverberations of historical trauma or dispossession, and the fruits of living in/between the borderlands.

Our readings will be varied and often in direct conflict with one another. Their selection and organization is meant to guide us through a broad consideration of Mexican history, from the colonial period to the Revolution, from the massacre at Tlatelolco to the Zapatista movement. While this class is primarily focused on reading and discussing literature-by Carmen Boullosa, Carlos de Sigüenza y Gongora, Sor Juana Inez de la Cruz, Juan Rulfo, Sandra Cisneros, Rudolfo Anaya, Wendy Trevino, Sara Uribe, Dolores Dorantes, Rosario Castellanos, and Fernanda Melchor-we will also be engaging historical analysis and theory-by Roger Barata, Octavio Paz, Matthew Restall, Heriberto Yopez, Sergio Pitol, Gloria Anzaldua, Elena Poniatowska, Sergio Gonzalez Rodríguez and Subcomandante Marcos. All texts will be provided or are available in English, although students who can are encouraged to read the texts in their original language.

The course will consist of weekly reading assignments and seminar-based discussions. You will be asked to produce weekly reading responses, prepare an oral presentation, participate in class discussion, and write a final paper.

Description

San Francisco anarchist poet Jack Spicer once wrote, in one of his letters to the then already deceased Spanish poet and playwright Federico García Lorca, "this is how we dead men write to each other." Spicer famously conceived of the speaker of a poem as being already dead-something that enabled him to fashion a kind of queer necro-underground in his work of the 1950s and early 1960s. In this he was participating in a conception of poetry, poets and poem-making that though certainly not-exclusively American in any sense has been present in the work of a wide range of North American poetries of the last one hundred and sixty years. This conception points to an understanding of literature itself as a "necrosocial" dimension, a social space of experience that is often a very intense one for the writer and reader while remaining simultaneously an impossible one in the sense that socializing with the dead would be, from most perspectives, empirically impossible. This understanding has proved important in different way for North American poets engaging in various Feminist, Indigenous, African American and generally counter-cultural necro-undergrounds of their own makings and desires. This course will feature the work of poets such as Walt Whitman, Emily Dickinson, Allen Ginsberg, Alice Notley, Dorothea Lasky, CAConrad, Nathaniel Mackey, Dolores Dorantes, Fred Moten, Cedar Sigo, Hoa Nguyen, and others. Students will engage with this work and related ideas in class discussions, and critical and creative writing assignments.

Description

Fredric Jameson argued that in an age of postmodernity "the very function of the news media is to relegate . recent historical experiences as rapidly as possible into the past." This course will consider the bold proposition that art and literature, to paraphrase modernist poet Ezra Pound, is "news that stays news," which might speak to our current crisis of collective memory. We will question whether or not art and literature have a special purchase on historical experience by analyzing what is meant by the term cultural memory and why it might be of importance to artists and writers. We will pay particular attention to key scholars within cultural memory studies such as Aleida Assmann, Pierre Nora, and Andreas Huyssen and cover examples from various traditions of cinema and sculpture. We will also study a range of literary forms by authors such as M. NourbeSe Philip, Ishmael Reed, Layli Long Soldier, and Theresa Hak Kyung Cha.

Description

This course takes Alfred Jarry's utopian notion of an 'imaginary science' as the model for just such a vision. We begin with Jarry's invention of 'Pataphysics, a practice whose aim is to bring exceptions into being. We start by focusing on the three tropes of exceptionality - the anomolous, the syzygia, and the clinamen - 'three events that involve a monstrous encounter, be it in the form of an excess, a chiasm or a swerve.' The course aims to look at different models of knowledge, and practices of knowing, and how these can be interrupted, diverted or subverted into new mental courses that cross many disciplinary boundaries. Central concerns include the relationship between the exceptional and the ordinary, the question of Truth, what it might be, what methods might access it, whether it can be known at all, and/or is it something we must actively create. The seminar

introduces a range of critical frameworks, and focuses on work that mixes traditional art media with methodologies from science, myth, religion, the occult and other non-aesthetic arenas of life. Terms covered include-scientia, poesie, theoria, truth; objectivity and subjectivity; knowledge-regime, phenomenon, simulacra, episteme; constructionism vs representation; revelation, channeling and inspiration, etc. The main project is to bring a new way of thinking into being by inventing a complex and detailed theory-of-your-own.

Description

Queer Books. What makes a book gay or lesbian Or queer? Or even indecent? Is queer writing literature by gays and lesbians or about gays and lesbians? Is there such a things as "gay style"? This course looks at contemporary gay/lesbian and "other" writing which challenges conventions of literature. Experimental writing has a long history of affiliation with gender and sexual experimentation, which invites the reader to look at this work as both a literary and cultural commentary. This work poses questions of sexual identity, of the body, of pain and pleasure, as well as of narrative and language itself.

Description

In this feminist & science fiction class, we will think of our class as a conversation with one another, and with intersectional feminist theories and practices. What can we continue to learn from feminist histories? How can we use feminist practices for social and political change? And importantly, might feminism inform your practices as artists? Our study of U.S. and transnational feminisms will explore a history of ideas central to intersectional feminism and identify how the ideas are present in current discourse, debates, and politics. We will use an intersectional approach that takes gender, sexuality, race, ethnicity, nationality, citizenship and ability as its starting point. Areas of study will include science fiction narratives inclusive of film, music, the novel, short story, poetry and video games. We will ask questions about identity, language and culture for how they can be sites of resistance and transformation. Together, we will read critical theory, manifestos, zines, essays, prose and poetry. Our methods of inquiry will include feminist practices as we

circle in consciousness raising groups, make zines, write collaborative tracts, perform textual and artistic interventions and develop new science fiction projects that carry forth a vision to build a better world.

Description

Art-Words: How to Talk About Art in the 21st Century

Is Art a form of work, or play? Research, or expression - of a self, or other things? Can it be a way of exploring the world outside human subjectivity, or perhaps even a method for constructing other (new) worlds, with or without ourselves in them? And what is the place of objects and matter in Art, when for some the artist is just another prop? Is all Art just imaginary and fictitious, stories we tell? Or can it be used to investigate different kinds of truth? And what of the status of stories in art-making? What does the term "Art" mean today, what has it meant historically, and what might or could it mean in the (near) future/s? This course examines how both the discourses and manifestations of Art have changed over the last 150 years, to ask what definitions and languages might be useful in the 21st century. We explore various discourses, focusing on key words, both in their contemporary and historical uses, including - Work, Play, Form, Content, Matter, Materialism, Purpose, Meaninglessness, Ambiguity, Value, Ideology, Politics, Identity, Subject, Object, Aesthetic/s, Art, Modernism, (post)-Modernism, Realism, Romanticism, Primitivism, Abstraction, Representation, Transgression, Autonomy, Art & Life, Critique, Criticality, and Contemporaneity. We study texts that attempt to define how we might approach art, the languages we use to discuss it, and the values we draw on in classifying and naming anything as Art. Alongside these we look at a wide variety of practices, not just from High Culture, but also from Instagram, non-western indigenous societies, pre-modern art forms and other non-art practices, such as self-taught artists and hybrids where the arts intersect with other disciplines.

Description
Race and Erasure: Black Literature in the Age of Ferguson. Open to BFA2, BFA3, and BFA4 students only. This course will explore a question suggested by Kenneth Warren in "What Was African American Literature": What, exactly, is the "black" in African American writing? Bound up with this question of identity is a collateral one that concerns itself in what we might call action: How do black writers respond to the "post" in the notion of the "post-racial"? What does all this mean in the era of post-Ferguson and Black Lives Matter? How does writing by African Americans respond to the complexities of this social and political moment? How do we understand the relationship between critical aesthetics and resistance to injustice? To this end, we will look at a set of literary and critical texts in an effort to pose these questions within their artistic and social contexts. Course texts will include Warren's own seminal essay, along with works by poets, memoirists, fiction writers, and playwrights that are responding to contemporary controversies regarding the life of precarity, racialized policing, and other symptoms of social tension and inequality. Hopefully, our inquiry will by turns clarify and complicate our ideas of what "black" writing might mean in this moment of heightened attention to socio-racial conflict and contestation.

Description
In recent years, "posthumanism" has been coined as a term to capture work by critical thinkers and artists that explores the limits of the human. Those limits can be traced back to the origins of Western modernity in the Renaissance and the Enlightenment, and their ties to colonialism. Starting from the "dark side" of Western modernity and the contradictions of "humanism" that it reveals, this course will consider various ways in which the human has both been asserted and challenged in Western philosophy after the Second World War. The course will pursue its historical and philosophical inquiry in relation to various works across the literary, visual, and performing arts ranging from a short story by Franz Kafka, to artworks by Barnett Newman and Carolee Schneemann, and music by Grace Jones and M.I.A. Apart from philosophy's troubled relation to the colonial subject and the slave, the course will consider various figures that have challenged Western philosophy's privileging of the human, including the animal, the cyborg, the object, and the plant. Philosophers to be discussed include Jacques Derrida, Adriana Cavarero, Alexander Weheliye, Byung-Chul Han, Vandana Shiva, and Donna Haraway. Requirements include weekly reading and writing as well as a final art project.

Description

Course not open to BFA1 students.
The Monstrous and the Terrible: Horror
Since Hawthorne and Poe, American fiction has flirted with horror. This class will look at horror as a mode, thinking about how it operates differently in fiction and in film. We will read selections from classic and contemporary stories and think about what makes horror successful. We'll consider John Clute's distinction between terror fiction and horror fiction, think about the roots of the genre, and think about where fictionalized horror still might go. We'll consider the ghost story, serial killers, the supernatural, and other touchstones, looking at particular stories or films in which they have particularly vivid or interesting expression. What does horror have to teach us about life in America? Do horror films allow for different sorts of things than horror fiction? We'll use such discussion to elicit new works that are creative and/or critical, and think about what, as a mode, horror can offer to artists today.

Description

Ecofeminism: Environmental Justice, Activism and Reimagining the World

Together, we will learn terms and concepts central to ecofeminism, environmental justice and activism. What is the anthropocene and how is it different from what theorists are calling the capitalocene? What might sustainability look like and how can it be fostered in your community? How can political organizing confront unequal power systems that jeopardize the air we breathe, the water we drink, the land we live on?

We will examine these questions by troubling how we have come to think about distinctions between nature-culture, local-global, and human-nonhuman agents. As Donna Haraway encourages, we will "stay with the trouble" to explore how non-dualistic, relational thinking may help us to face ecological problems in a more viable way. Theorists and artists show us how the ocean waves carry plastic from the California coast to Sweden's ports, how the mushroom and its gifts can be traced from Japan and the U.S. to China and Finland, and how human animals and nonhuman beings cohabitate to create mutual survival systems.

Our study will be grounded in an intersectional feminist analysis, which insists that a study about environmental justice highlights issues of racism, gender, economic inequity, Indigenous rights and settler colonialism. It also claims that questions about the environment must be connected to issues of health, human rights, and imagining a world where all can live and thrive. In addition to critical texts, we will look to film, literature, visual art, performance and music to see how artists are engaging environmental and activist issues in their practices. And importantly, how might environmental concerns inform your practices as artists and creators?

Description

How to Read Closely
Decelerationists of CalArts Unite! We are living in a time when our capacity to pay attention is being destroyed. Information circulates in unprecedented amounts, and faster than ever before. We try to focus while managing our email and our pinging phones, but more often than not our brains feel adrift and toxic feelings of emptiness and superficiality take over. Entire hours disappear into the scroll. Not infrequently a full day goes by without us having anything to show for it. In such a time, slowing down and paying close attention becomes a revolutionary activity. In this course, we will engage in a decelerationist revolt by practicing the method of

close-reading: studying very short, philosophical stories slowly, and in detail, in order to explore their meaning. Course requirements: reading/ note-taking, discussion, and a final paper.

Description

Magic Circles: Art Without an Audience

Of Nordic Larp, Elvia wilk writes that the "Magic Circle" can be "defined as a 'membrane' that circumscribes virtual worlds. Once you step into the magic circle, you have committed to suspension of disbelief. You have bought into the communal fantasy, the collective delusion, and agreed to the terms."

Our course will examine the methods by which artists construct playful, political, and spiritual spaces outside of, or otherwise protected from, normative pressures and the dynamics of viewership, wherein they might "mediate and reinvent the self." From the esoteric and extra institutional-such as tabletop games, larp, online networks, alter egos, film sets, intentional communities, music scenes, new religious movements, group therapy, interactive theater, one-on one performance art, and escape rooms-to critically sanctioned forms of traditionalism-such as the picture frame, stage, and camera lens—we'll learn about (and experiment with) the myriad ways creative producers establish new social contracts to access ways of being repressed or elided by dominant culture. We'll examine art that works in non-presentational modes, does not imagine an audience, and rejects larger social entanglement in favor of personal or communal introspection. What happens when, instead of breaking down the gallery walls, for a time, we simply lock the door?

Over two weeks, students will first engage in a collective reimagining of the classroom space through meditation, group writing, discussion, and some small lectures. The remainder will unfold as a private group performance of learning, documented to a mutually agreed upon degree using collaborative methods and materials. The idea is for students to have an opportunity to teach one another through their art practice. Readings will be assigned by both the instructor and the students, so the material could veer in all sorts of directions, but will represent a sampling of relevant theory, journalism, poetry, fiction, and hybrid forms.

Possible co-thinkers may include Fritz Haeg, Cory Doctorow, Giorgio Agamben, Genesis Breyer P-Orridge, Ursula K. Le Guin, Fred Moten, Hellen and Scott Nearing, Herbert Marcuse, Antonin Artaud, Ellen Willis, Adrian Piper, C G Jung, Andr Breton, Jacques Ranciere, Guy Debord, Donna Haraway, Anna Tsing, Clair Bishop, and others.

Magic Circles is open to all mtiers, but students should feel comfortable integrating research into their practice and join with a desire to contribute to this collective, experiential style of critical expression that reflects the ethos of our topics of study.

Description

Byung-Chul Han: Critical Perspectives

This course will focus on the work of a single thinker: the Korean-born, German philosopher Byung-Chul Han. Since 2005, Han has distinguished himself by a steady output of short, pocket-sized books (some twenty titles so far) about urgent and timely topics ranging from "burnout" and "the transparency society" -- in two of his most famous works -- to what he has theorized as "psychopolitics" and "the aesthetics of injury." His work has also developed a focus on Far Eastern thought, in particular Zen Buddhism and Daoism. A writer who, in a time of general disorientation, has been seeking to convert his readers toward the philosophical project of careful thinking, Han in his work reminds us of the classical origins of philosophy as the focused pursuit of wisdom in close relation to the quickly developing societies around us. But are Han's diagnoses of our contemporary situation correct? And what do we think of the solutions he proposes in response? Course requirements include weekly reading and writing. Students will read two books by Han in full, as well as excerpts from all of Han's other books.

Description

Matter and Materialisms: The concept of matter from Presocratic Philosophy to New Materialism Materialism is all the rage in contemporary political and art theory, be it the renewal of Feuerbach's anti-idealist materialism in the Marxist tradition (e.g., Badiou, Ranciere, Zizek, etc.), or the revival of Spinoza's monist materialism in the feminist tradition (e.g., Donna Haraway, Elizabeth Grosz, Jane Bennett, etc.). But what do these strands have in common beyond the things they oppose (i.e., ideal structures determining the arc of history, or disembodied

souls separating humanity from nature)? Is there a positive concept of matter that can be thought outside its oppositions to idea and spirit? What does it mean to be a materialist in the present age, and what does it commit one to?

The purpose of this course is to answer these questions by returning to the beginning of the Western philosophical tradition and telling the story of the concept of matter from its origins in Ancient Greek physics and metaphysics (i.e., the presocratics, Plato, and Aristotle), to its transformation in modern philosophy and mathematized physics, before exploring the key influences and ideas upon which contemporary discourse about materialism turns. This will provide us with the historical and conceptual background necessary to critically engage with contemporary metaphysical debates ignited by 'speculative realism', 'new materialism', and their critics, and to examine their political and artistic consequences.

Description

This course approaches the limits of Sense (and the senses) from many angles, including philosophy, linguistics, psychoanalysis, anthropology, visual art, mythology, religious studies (including mysticism and the Dionysian) literature, film, and critical race studies studies. It aims to highlight the rich and complex possibilities of the zones between pure Sense and absolute meaninglessness-zones some have called Non-sense. The course includes the work of numerous 'outsiders,' artists, scientists and thinkers, including sock puppets and what the French call fou litteraire, philosopher-linguists who have the (higher) wisdom of the fool. We also look at various shamanic practices, focusing on how ideas and practices from Europe and its ex-colonies have melded to create new ways of understanding Sense and its multifarious limits. We read and discuss material from a wide range of perspectives including-L. Carroll, J-J. Lecercle, R. Roussel, A. Artaud, K. Eshun, Rammallzee, Sun Ra, D. Coole, A. Wehelyi, G. Morton, M. Bull, E. Vivieros de Castro, C. Levi-Strauss, G. Deleuze, J. Stallybrass, and others. Core concepts include: non-sense, fou litteraire, delire, afro-futurism, new materialism, OOO, nothing, habeas viscus, geontology, dirt, the carnivalesque, genius, improvisation, the sublime, Othernesses, perspectivism, structuralism, knowledge, meaning, meaninglessness, etc.

Description

This course will seek to identify key traits of Western aesthetic thought, consider the politics of such thought, and explore alternatives to it. Taking as a central point of reference Walter Benjamin's classic essay on "The Work of Art in the Era of Mechanical Reproduction", the course will seek to pursue in particular a theory of art whose concepts are "completely useless for the purposes of fascism", as Benjamin already put it. Using the work of the controversial political thinker Carl Schmitt to identify the centrality of exceptionalism in Western aesthetics, the course will seek to destabilize that situation by focusing on three figures that have long troubled Western aesthetics: the vandal, the forger, and the sage. Moving from discussions of art vandalism (in works by Byung-Chul Han, Ben Lerner, Tobin Siebers, among others), to art forgery (the forgers Elmyr de Hory, Han van Meegeren, Zhang Daqian), to ancient Chinese (and specifically daoist) understandings of the work of art-as-process (in the work of contemporary artist Song Dong, for example), the course will explore a theory of unexceptional art that gives pride of place to the destroyed or damaged artwork; to the copy, the fake and the forgery; and to Chinese landscape painting (versus the Western nude). All three will enable us to think-though rarely in straightforward, non-dialectical ways-alternatives to exceptionalist aesthetics that will emerge in the course as politically meaningful, particularly today.

School of Critical Studies

Academic Level

UG - Undergraduate

Credit Hours

Min Credit Hours:

3

Description

Philosophy of Vision and Visuality. Open to BFA-2, BFA-3, and BFA-4 students only. In recent decades, the study of vision and perception has merged with the study of visibility and cultural production. This course departs from Walter Benjamin's theorizing on culture, which was proceeded by Theodor Adorno's aesthetic theory and Guy Debord's observations on society and spectacle. The course also encompasses the postmodern perspective expounded by writers such as Jonathan Crary and Susan Buck-Morris who suggest that modern visibility has been altered by technological and media-based mediation. The tendency to fuse vision and visibility relies on an underlying philosophical tradition (from Descartes to Maurice Merleau-Ponty) that centers on the metaphor of the 'eye'. Considering both of these tendencies, the cultural and the philosophical, the course will try to define what vision entails for contemporary art beyond the filmic layer of image production.

Capitalist Theology and the Magic of the State

For generations now, it has been much remarked upon by scholars from a wide range of disciplines that capitalism and the modern nation state are characterized by elements that have a distinctly religious quality despite the secular, rational world view that capitalism and the modern nation state are said to possess. This course will investigate instances of what Karl Marx called commodity fetishism, and what others, following Marx, have termed 'state fetishism' or the 'magic of the state'. We will also be looking at different uses of the figure of the fetish and discussing their history and relations to art-making, to social creativity and to protest.

Description

This course is a feminist exploration of materialism. In recent years feminist thought has turned to matter as a site of political urgency, agency and aesthetics. This course asks, what does feminism have to do with matter and materiality? We consider the long history of feminist engagement with questions of the body, objects, environments and labor. We look to ways that material conditions of life have informed feminist political, philosophical and aesthetic outlooks. While we explore historical legacies of feminist thought, our focus will be on contemporary debates about the agency and vitality of matter in human, post-human and non-human forms.

Description

Wallace Stevens once said that all poetry is experimental poetry. However that may be the case, some literary works are more experimental than others. In this class we will study a variety of texts-in printed books and in digital forms online-that aggressively experiment with genre, structure, materiality, and style. We will question what is gained by literary experimentation and why writers might want to deviate from some conventions while cleaving to others. In this way, we will gain an appreciation for what Harold Rosenberg called a "tradition of the new." That being said, we will also consider larger cultural dynamics that determine what is considered experimental and what is considered mainstream. Potential novelists, essayists, and poets to be studied may include Vladimir Nabokov, Claudia Rankine, Anne Garréta, Stephanie Strickland, and Matías Celedón.

Description

This course considers curation as a critical social practice. Students from across the institute are invited to engage with specific issues within curatorial studies, such as site specificity, globalization, social engagement and aesthetics. We invite students to ask questions about the agency of the curator in relation to artists, institutions and societies at large. The course is designed to critically engage such curatorial questions alongside practical aspects of curating. We will hear from curators as well as consider design, budget and audience response to specific exhibitions. Students are asked to design and conceptualize their own exhibition for the course in diverse and experimental media.

Description

Whilst 'Man' has long been the measure and figure of human subjectivity, many now argue that we need new figures to adequately characterize the varietous forms in which humanity manifests today. This course examines a range of theories that

bring into being new ways of thinking the human. Starting with critical race theorist, Sylvia Wynter's critique of MAN (1 + 2), we at look the four figures of Foucault's bio-political theory, Elizabeth Povinelli's three figure of geonoto-politics, and Alexander Weheliye's concept of Habeas Viscus, as well as recent updates on psychoanalytic, feminist and queer views of subjectivity. We also reflect back upon the historical origins of Man in Kant and Descartes, and on other critiques of this figure by Achille Mbembe, Fred Moten, Deleuze and Guatari, Silvia Federici, and others. Questions addressed include-What is a human subject? What iare ts relations to others? And what are the contexts and assumptions through which these subjects and their others are described? Or, to put it another way-what are the stories and images through which we represent ourselves to ourselves? Within each perspective we examine the political, aesthetic, social, symbolic, and affective dimensions of the theory, and look at a range of related creative works, including films, visual art, novels, poems and performances. Key authors include: S. Wynter, I. Kant, S. Freud, J. Lacan, A. Weheliye, A. Mbembe, J. E. Muñoz, L. Irigaray, J. Kristeva, W. Apollon, J. Butler, E. Sedgwick, P. Preciado, and E. Povinelli, etc. Key terms include: subject, subjectivity, ego, Other, otherness, whiteness, knowledge regime, colonialism, the postcolony, disidentification, habeas viscus, pornotropeing, gender, the unconscious, jouissance, signification, social link, the symbolic, femininity, masculinity, transgender, savoir vs. connaissance, etc.

Description

Revolution, Change, Difference Marxism, Accelerationism, Realism/Materialism, Khun, Fish, Brassier, Negarastani, Brandom.

A revolution is a violent rupture that asks us to redefine, revise and re-think what we perceive to be the natural conditions of life and our future. In contemporary culture, the hope that art has the power to instrumentalize social change is

often cast as the product of an old romance, or forms of weak nostalgic aspirations from a left-over avant-garde. But, what is the structure of a revolution? How do things change? What is the relationship between how we understand the conditions we live in and how we might change them - for the better? If change 'just happens naturally' (in that each week, day, minute or second is not the same and has a 'revolutionary aspect') then why do we task art with the project of making change happen?

What is at stake for art as a revolutionary agent, when this form of agency is often cast as folklore, mythology and fantasy?

These questions ask us explore the concepts of mastery, reason, knowledge, and power; as well as the deeper relations between language and the way we comprehend the structure of reality itself.

This course involves a set of reading seminars where we will examine critical and philosophical texts very closely. These will include the work of Marxist and post-Marxist thinkers as well as investigations into the analytical tradition.

Description

The Philosophical Thriller

What if we lived in a world in which events outside of science -- events that could never be explained by science -- can occur? What kind of philosophy would such a world invite? What kind of stories could we tell about it? These are questions that have troubled critical approaches to science fiction. In this course we will use the French philosopher Quentin Meillassoux's essay "Science Fiction and Extro-Science Fiction" to develop a critical framework for reconsidering the detective novel in this context. Focusing on three very different contemporary detective novels -- Friedrich Durrenmatt's *The Pledge*, Brian Evenson's *Last Days*, and Paul Auster's *The New York Trilogy*--, we will study these novels as philosophical thrillers that pose to us the challenge of thinking, writing stories, and making art in a world in which there is no reason why anything should stay the same from one moment to the next. Philosophers and critics to be considered include Nietzsche, Hume, Kant, Agamben, Felman, Ghosh, and Felski. Additional literary texts by Borges, Asimov, Henry James, and Hawthorne. Course will include a visit by Brian Evenson.

Description

Becoming Latin America: Universalism and Regionalism in The New World from the 19th - 21st Century.

In this course, students shall explore various theoretical, historical and literary discourses through which authors conceived of the complementarity between the local and global in the attempt to think of the identity and destiny of Latin American nations, and of the continent as a whole. Following and expanding upon the broad genealogy

drawn by Colombian philosopher and cultural critic Fernando Zalamea in his groundbreaking study *Ariel y*

Arisbe: evolución y evaluación del concepto de América Latina en el Siglo XX (2000), we trace the way in which

Latin American thinkers, artists and activists have sought to simultaneously express the particularities of their

own worlds, while also thinking of themselves in light of a geopolitical and global horizon of cultural production.

Guided by the utopian aspiration to nurture productive mediations between distinct modes of expression and

seek new modes of integration between different cultural forms, we will see how a Latin American "universalist" tradition emphasized the place of Latin America in the continuum of Western culture, within which

the native traditions and unique histories were integrated into a global horizon across the sciences, arts, and politics.

We shall be exploring works by a variety of authors and artists from the 19th Century and until the present, including Andrés Bello, José Enrique Rodó, Pedro Henríquez Ureña, Clorinda Matto de Turner, Cesar Vallejo, Jorge Luis Borges, Isabel Allende, Angel Rama, Rafael Gutierrez Girardot, Octavio Paz, Rosa María Magda, Bruno Bosteels, Claudia Llosa, Chantal Mouffe, Ernesto Laclau, Ciro Guerra, among others.

Description

This course explores the historical development of Latin American cultures since the pre-Columbian era, through the colonial and republican periods, and until the present. It studies how colonialism operates as a historical force in the continent through which distinct worlds come into violent confrontation with one another, beginning with the arrival of the Iberian explorers to the Caribbean in 1492. In this encounter, colonialism progressively unleashes its conquering force, but also gives birth to unprecedented forms of artistic and cultural production in which the latent possibilities and contradictions latent in Latin America are made explicit and problematized.

In particular, the course will focus on the complicated mediations that take place between the Indoamerican cultures and populations of Latin America and the Western world since the so-called "Age of Discovery," giving rise to manifold tensions, prospective "projects," and utopian visions concerning the future of the continent. We will thereby examine how colonialism functions not only as a political or economic process of imperialist expansion, but as a cultural matrix of power that extends and continues well beyond the independence movements that gave birth to the Latin American republics.

Among the questions to be interrogated in the course are: how did the pre-Columbian cultures of Latin America conceive of the world and their political organizations, in contradistinction with the European social, philosophical, artistic, and political models that were imported and imposed during the periods of the Conquest and beyond? How did the colonial-Iberian rule seek to destroy the indigenous past and cultures, while nevertheless triggering modes of subversion and resistance from different agencies that challenged Eurocentric matrix of power? What role does art play in the subversion against colonialism and the coloniality of power? How did the prescient conflict between the indigenous and Western traditions of Latin America continued to evolve during the republican period, becoming subject to manifold artistic, political, and philosophical imaginaries? How did different vectors of indigenista thought pursued the vindication of the native traditions and populations of Latin America within the context of alternative modern futures? And how can we understand the conditions for a decolonial art and politics that does not relapse to new covert modes of Eurocentrism, but also avoids the depoliticizing dangers of cultural relativism?

Among the authors and texts we will be surveying are: the Popol Vuh, Bartolomé de las Casas, Sor Juana Inés de la Cruz, José Martí, Clorinda Matto de Turner, José Carlos Maritegui, Clarice Lispector, José Enrique Rodó, José Vasconcelos, Silvia Rivera Cusicanqui, Rita Segato, Enrique Dussel, Walter Dignolo.

School of Critical Studies

Academic Level

UG - Undergraduate

Credit Hours**Min Credit Hours:**

3

Description

This course will introduce students to the social, political, and aesthetic history of what is often known today as "affect theory." While the recent "affective turn" is largely associated with poststructuralist theory, this course seeks to broaden the conceptual framework for thinking about what constitutes emotions and feelings in our contemporary moment. Starting with the history of political sentiment and female sentimentality from the Romantic period, students will track the changing contours and definitions of feelings as they have evolved from the 18th century to the present. In particular, we will focus on the relationship between affect and the public sphere to consider how seemingly individual, embodied, and private feelings are increasingly imbricated in political decision-making, mass culture, and everyday life.

Students will read, consider, and debate a range of affect theory: the foundational work of Gilles Deleuze which stems from the philosophical traditions of Spinoza and Bergson; the work of psychoanalyst Silvan Tomkins which greatly influences later queer and feminist theorists such as Eve Kosofsky Sedgwick and Sianne Ngai; as well as more recent scholarship on "vibes" and "atmosphere" that find their roots in German media theory and phenomenology. In addition to reading canonical works of affect theorists such as Lauren Berlant, Rei Terada, and Brian Massumi, students will also engage work by scholars less frequently associated with affect theory proper, such as James Chandler, Stanley Cavell, Janice Radway, and Linda Williams. In the spirit of affect's own mercurial and porous nature, our aim is to consider affect theory both within and outside of its disciplinary boundaries.

In addition to critical reading summaries and reflections, students will also play with different genres of writing about their affective experiences and encounters in this class. Drawing on the critical frameworks from our syllabus, students will be encouraged to experiment with more creative forms of essayist writing, such as the "aesthetic report" or the daily journal.

Description

What happens when an artwork puts its status as object into question? This is a question that runs deep in Chinese art and philosophy and stands in some tension to the central presuppositions of much, if not most, Western thought. To engage with this question at the limits of European philosophy and with special attention to China, this team-taught, interdisciplinary class proposes to draw on the work of sinologist François Jullien, whose philosophy has recently received new interest through new translations, books, and special journal issues. The class consists, first, of a close-reading of Jullien's *The Great Image Has No Form, or On the Nonobject Through Painting*, a book that we intend to read in its entirety, and in detail. Exploring the ontology of the "nonobject" in Chinese art and aesthetics, the class considers, as a second major objective, the relevance of such thought—which is deeply rooted in Daoism and specifically chapter 41 of Lao Zi's *Dao De Jing*—to contemporary art and music: conceptual and minimalist art since the 1960s, work by the Beijing-based artist Song Dong, silent music in the experimental tradition of John Cage, and more—including work made by students in the class. Students are invited to submit, as the final assignment for the class, a project at the crossroads of the critical and the creative that responds to the philosophical and artistic "detour via China" (Jullien) that the class offers.

Description

Matter and Materialisms: The concept of matter from Presocratic Philosophy to New Materialism. Materialism is all the rage in contemporary political and art theory, be it the renewal of Feuerbach's anti-idealist materialism in the Marxist tradition (e.g., Badiou, Ranciere, Zizek, etc.), or the revival of Spinoza's monist materialism in the feminist tradition (e.g., Donna Haraway, Elizabeth Grosz, Jane Bennett, etc.). But what do these strands have in common beyond the things they oppose (i.e., ideal structures determining the arc of history, or disembodied souls separating humanity from nature)? Is there a positive concept of matter that can be thought outside its oppositions to idea and spirit? What does it mean to be a materialist in the present age, and what does it commit one to?

The purpose of this course is to answer these questions by returning to the beginning of the Western philosophical tradition and telling the story of the concept of matter from its origins in Ancient Greek physics and metaphysics (i.e., the presocratics, Plato, and Aristotle), to its transformation in modern philosophy and mathematized physics, before exploring the key influences and ideas upon which contemporary discourse about materialism turns. This will provide us with the historical and conceptual background necessary to critically engage with contemporary metaphysical debates ignited by 'speculative realism', 'new materialism', and their critics, and to examine their political and artistic consequences.

Description

This lecture and seminar based course explores the question of art's power in contemporary and historical (Modern) societal contexts. Art's power can be correlated to its ability to effect social change, to construct new possibilities for life, as well as to destabilize and destroy existing forms of power. Analyzing and discussing the modes of critique that have been developed through artistic practice and which have been claimed to define and deliver the power of art within the political, we examine the tenability of critique as it has been claimed in contemporary cultural definitions and materially in artworks from avant-gardist antagonisms, (negative) dialectics, embodiment, irony, pragmatism, nihilism and new realisms.

Description

This course will seek to identify key traits of Western aesthetic thought, consider the politics of such thought, and explore alternatives to it. Taking as a central point of reference Walter Benjamin's classic essay on "The Work of Art in the Era of Mechanical Reproduction", the course will seek to pursue in particular a theory of art whose concepts are "completely useless for the purposes of fascism", as Benjamin already put it. Using the work of the controversial political thinker Carl Schmitt to identify the centrality of exceptionalism in Western aesthetics, the course will seek to destabilize that situation by focusing on three figures that have long troubled Western aesthetics: the vandal, the forger, and the sage. Moving from discussions of art vandalism (in works by Byung-Chul Han, Ben Lerner, Tobin Siebers, among others), to art forgery (the forgers Elmyr de Hory, Han van Meegeren, Zhang Daqian), to ancient Chinese (and specifically daoist) understandings of the work of art-as-process (in the work of contemporary artist Song Dong, for example), the course will explore a theory of unexceptional art that gives pride of place to the destroyed or damaged artwork; to the copy, the fake and the forgery; and to Chinese landscape painting (versus the Western nude). All three will enable us to think-though rarely in straightforward, non-dialectical ways-alternatives

to exceptionalist aesthetics that will emerge in the course as politically meaningful, particularly today.

3

Description

This course explores the Fluxus art movement of the nineteen sixties and seventies alongside theories of the 'everyday' put forward by Erving Goffman, Michel de Certeau and others. Why were these theorists and artists compelled to theorize and transform everyday life, and how do their efforts relate to our present cultural situation? A central focus of the course will be Alison Knowles' House of Dust installation at CalArts in 1970, and a contemporary version of the House of Dust built during Wintersession 2018. Students in the Making of Everyday Life will be encouraged to use the new House of Dust as a venue and base for performances and on-campus happenings over the course the semester, working with visiting artists.

Description

Philosophy of Vision and Visuality.

In recent decades, the study of vision and perception has merged with the study of visuality and cultural production. This course departs from Walter Benjamin's theorizing on culture, which was proceeded by Theodor Adorno's aesthetic theory and Guy Debord's observations on society and spectacle. The course also encompasses the postmodern perspective expounded by writers such as Jonathan Crary and Susan Buck-Morris who suggest that modern visuality has been altered by technological and media-based mediation. The tendency to fuse vision and visuality relies on an underlying philosophical tradition (from Descartes to Maurice Merleau-Ponty) that centers on the metaphor of the 'eye'. Considering both of these tendencies, the cultural and the philosophical, the course will try to define what vision entails for contemporary art beyond the filmic layer of image production.

Description

An upper level course introducing students to modern philosophy through a selection of readings from works by Hume, Kant, Schelling, Hegel, Husserl, Heidegger, Bergson, Wittgenstein, Sartre, de Beauvoir, Levinas and Derrida. The course follows the themes of Being and Becoming in modern philosophy, varying in range of philosophical texts from issues such as empiricism and rationalism to idealism, phenomenology and existentialism to deconstruction. We will follow both expositions and critiques of various conceptions of Being and Becoming in respect to questions concerning the nature of reality, representation and cognition. The first section will focus on Hume, Kant, Schelling and Hegel and epistemological questions concerning Being: Hume's problem of induction; Kant's demarcation of knowledge; Schelling's teleology and Hegel's philosophy of history and dialectics.

The second section will focus on Husserl, Heidegger, Bergson and Wittgenstein: Husserl's phenomenological analyses of Being, Heidegger's conception of Being and time and poetry, Bergson's notion of duration and Becoming and

Wittgenstein's socio-linguistic philosophy and his concept of language games.

The third section will explore some aspects of Being and Becoming in the writings of Sartre, de Beauvoir, Levinas and Derrida. Sartre's existential psychoanalysis in Being and Nothingness; de Beauvoir's early conception of feminism in The Second Sex; Levinas' conception of Being, temporality and the other and Derrida's critical assessments of both Being and Becoming in relation to western philosophical thought.

Description
Capitalist Theology

For generations now, it has been much remarked upon by scholars from a wide range of disciplines that capitalism and the modern nation state are characterized by elements that have a distinctly religious quality despite the secular, rational world view that capitalism and the modern nation state are said to possess. This course will investigate instances of what Karl Marx called commodity fetishism, and what others, following Marx, have termed 'state fetishism' or the 'magic of the state'. We will also be looking at different uses of the figure of the fetish and discussing their history and relations to art-making, to social creativity and to protest.

Description

This course is a feminist exploration of materialism. In recent years feminist thought has turned to matter as a site of political urgency, agency and aesthetics. This course asks, what does feminism has to do with matter and materiality? We consider the long history of feminist engagement with questions of the body, objects, environments and labor. We look to ways that material conditions of life have informed feminist political, philosophical and aesthetic outlooks. While we explore historical legacies of feminist thought, our focus will be on contemporary debates about the agency and vitality of matter in human, post-human and non-human forms.

Description

Wallace Stevens once said that all poetry is experimental poetry. However that may be the case, some literary works are more experimental than others. In this class we will study a variety of texts-in printed books and in digital forms online-that aggressively experiment with genre, structure, materiality, and style. We will question what is gained by literary experimentation and why writers might want to deviate from some conventions while cleaving to others. In this way, we will gain an appreciation for what Harold Rosenberg called a "tradition of the new." That being said, we will also consider larger cultural dynamics that determine what is considered experimental and what is considered mainstream. Potential novelists, essayists, and poets to be studied may include Vladimir Nabokov, Claudia Rankine, Anne Garréta, Stephanie Strickland, and Matías Celedón.

While the recent "affective turn" is largely associated with poststructuralist theory, this course seeks to broaden the conceptual framework for thinking about what constitutes emotions and feelings in our contemporary moment. Starting with the history of political sentiment and female sentimentality from the Romantic period, students will track the changing contours and definitions of feelings as they have evolved from the 18th century to the present. In particular, we will focus on the relationship between affect and the public sphere to consider how seemingly individual, embodied, and private feelings are increasingly imbricated in political decision-making, mass culture, and everyday life.

Students will read, consider, and debate a range of affect theory: the foundational work of Gilles Deleuze which stems from the philosophical traditions of Spinoza and Bergson; the work of psychoanalyst Silvan Tomkins which greatly influences later queer and feminist theorists such as Eve Kosofsky Sedgwick and Sianne Ngai; as well as more recent scholarship on "vibes" and "atmosphere" that find their roots in German media theory and phenomenology. In addition to reading canonical works of affect theorists such as Lauren Berlant, Rei Terada, and Brian Massumi, students will also engage work by scholars less frequently associated with affect theory proper, such as James Chandler, Stanley Cavell, Janice Radway, and Linda Williams. In the spirit of affect's own mercurial and porous nature, our aim is to consider affect theory both within and outside of its disciplinary boundaries.

In addition to critical reading summaries and reflections, students will also play with different genres of writing about their affective experiences and encounters in this class. Drawing on the critical frameworks from our syllabus, students will be encouraged to experiment with more creative forms of essayist writing, such as the "aesthetic report" or the daily journal.

Description

What happens when an artwork puts its status as object into question? This is a question that runs deep in Chinese art and philosophy and stands in some tension to the central presuppositions of much, if not most, Western thought. To engage with this question at the limits of European philosophy and with special attention to China, this team-taught, interdisciplinary class proposes to draw on the work of sinologist François Jullien, whose philosophy has recently received new interest through new translations, books, and special journal issues. The class consists, first, of a close-reading of Jullien's *The Great Image Has No Form, or On the Nonobject Through Painting*, a book that we intend to read in its entirety, and in detail. Exploring the ontology of the "nonobject" in Chinese art and aesthetics, the class considers, as a second major objective, the relevance of such thought—which is deeply rooted in Daoism and specifically chapter 41 of Lao Zi's *Dao De Jing*—to contemporary art and music: conceptual and minimalist art since the 1960s, work by the Beijing-based artist Song Dong, silent music in the experimental tradition of John Cage, and more—including work made by students in the class. Students are invited to submit, as the final assignment for the class, a project at the crossroads of the critical and the creative that responds to the philosophical and artistic "detour via China" (Jullien) that the class offers.

Description

This course examines aesthetics as a concept that mediates the intersections of art, politics, and culture. Students will engage with a range of theoretical texts and artistic practices to investigate how aesthetic thought has shaped—and been shaped by—social and political forces. While the specific focus varies depending on the instructor, the course consistently challenges students to question and expand their understanding of art's cultural and political significance.

Topics may include the politics of representation, institutional critique, the impact of technology on artistic production, and non-Western aesthetic traditions. Students might explore figures such as Walter Benjamin, Susan Buck-Morss, or

Hito Steyerl, as well as analyze aesthetic practices ranging from net art to the aesthetics of vandalism and repair. Assignments and discussions will focus on developing graduate-level research, writing, and presentation skills.

This is one of two required theory courses for Aesthetics and Politics MA students. It is also open to MFA students and others across the Institute who are interested in reading-intensive critical theory. With challenging weekly readings (50-100 pages), intensive class discussions, and a final project, this course provides a foundation for analyzing aesthetics in contemporary society.

Description

This course examines key ideas and debates in political thought, focusing on how contemporary thinkers address questions of power, governance, liberation, and resistance. While the specific focus varies by instructor, the course centers on critical engagement with political concepts and their relevance to urgent issues in today's world.

Students will explore a range of perspectives on topics such as sovereignty, the cultural dimensions of power (race, gender, national identity), radical politics (anarchism, socialism, communism, radical democracy), and political transformation. Readings will include classical texts alongside contemporary works that challenge or extend traditional frameworks, drawing from a variety of political traditions and theoretical approaches. Through extensive reading, writing, and discussion, the course encourages students to critically analyze political ideas and articulate their own perspectives on the intersections of politics and theory.

This is one of two required theory courses for Aesthetics and Politics MA students. It is also open to MFA students and others across the Institute who are interested in reading-intensive critical theory. With challenging weekly readings (50-100 pages), intensive class discussions, and a final project, this course provides a foundation for analyzing politics in contemporary society.

Description

This course is required for all MA Aesthetics & Politics students and is open to graduate students from across the whole Institute, space permitting. It centers on the Aesthetics and Politics Lecture Series, featuring a yearlong program of public events with a rotating theme determined each semester by the instructor.

The series includes lectures, debates, artist talks, film screenings, performances, and discussions on topics such as art, politics, media, philosophy, and architecture. Guest speakers meet with MA students in seminar sessions to discuss their work, with preparatory classes at CalArts structured around readings by or about the speakers. These sessions provide an opportunity for students to critically engage with numerous perspectives across disciplines and debates in contemporary aesthetic and political theory.

Critical Discourse in the Arts and Media. This course is required for all MA Aesthetics & Politics students. Other graduate students by permission of instructor only, space permitting. This course will focus on the question of media and democracy. The lecture series' yearlong line-up that structures the course normally ranges from political debates to film screenings and performances, as well as conversations about art, architecture, and philosophy. All public events (once a month) take place either in the Council Chambers (street level) or in the Community Room (upstairs) at the West Hollywood Public Library, located on 625 N. San Vicente Boulevard, West Hollywood, CA 90069. Speakers meet with MA students for a seminar session during the same days of the events and at the same premises. A light lunch with them follows. The classes at

CalArts focus on the upcoming events and are structured around the discussion of readings by or on the visiting speakers.

Description
Aesthetics and Politics Thesis Seminar.

This course is required for all MA Aesthetics & Politics students. Open to the MA A&P Program only. This seminar aims to guide students from pre-writing to writing: it intends to accompany them through the preparatory stages of the writing to prepare them for the actual writing of the thesis.

Over the course of the seminar, students will discuss their thesis topics with their peers and generate (as well as workshop) various documents that are considered essential to the pre-writing process: an abstract, a research bibliography, a table of contents, a chapter outline, and more. In addition, students will familiarize themselves with the Aesthetics and Politics program's thesis style guidelines.

The seminar may also include a visit by research librarians, who will help students generate a research bibliography, and who will explain the library's guidelines for the final thesis deposit, which is required in order for students to be awarded the MA degree.

Description

Research Seminar on the Aesthetics of Politics. In this course, we will read and analyze key conceptual contributions of Jewish/German/American political thinker Hannah Arendt, and American philosophers Judith Butler and Linda Zerilli to the field of aesthetics and politics. In particular, the seminar will seek to develop an aesthetic understanding of "the political" by analyzing how Arendt's political thought dealt with, on the one hand, "action" in terms of a performative, egalitarian, and plural appearance and with, on the other hand, "judgment" as a consequence of her political reading of Kant's aesthetic judgment. In this way, Arendt will help us introduce a foundational vocabulary and conceptual framework based on her notions of the space of appearance, the performativity of action, and an aesthetic understanding of political judgment. Contemporary thinkers Butler and Zerilli are the most influential political and democratic theorists making use of this Arendtian aesthetico-political theorizing of action and judgment. During the week, our daily discussions will be organized as follows: First day, we'll read sections from Arendt's The Human Condition and On Revolution. Second day, we'll read sections from Butler's Parting Ways and Notes Toward a Performative Theory of Assembly. Third day, we'll discuss sections of Arendt's Eichmann in Jerusalem and The Life of the Mind. Finally, in our fourth class we'll analyze sections of Zerilli's A

Democratic Theory of Judgment. As a consequence of our intertwining of these three authors, we will be in a position to pose poignant questions involving a novel approach to aesthetico-political regimes understood as theological, epistemic, and aesthetic horizons for the configuration of collective life. During the week, students will meet at least once with the instructor during office hours to discuss the paper topic and other themes related to the workshop.

Description

In this class, MFA students will gain exposure to diverse visiting writers. In the first term, we will meet once a week to read and discuss cutting edge work, paying specific attention to narrative voice, sentence structure, and the use of figurative language. We will closely read course texts in relation to our own experiments, considering genre, inspiration, and publishing

trends. We will also interrogate the political, social, and personal in our creative writing and critical response.

Over the next 3 terms, course meetings will correlate with public events featuring writers/speakers related to our four program concentrations (Documentary Strategies, Image & Text, Writing & Its Publics and Writing & Performativity). Fostering our MFA community, Writing Now will offer MFA students continuous access to compelling examples of writing production and circulation.

Description

With the exception of pornography, our sexuality, our sex lives, our sexual fantasies, rituals, and practices are rarely represented or examined by writers. We might start by asking what is more fundamental and universal to humans than sex? In writing and images, a pivotal distinction arises between the pornographic, whose goal is arousal, and sex writing, whose goal is representational: to capture in words

experiences that exist largely outside language, a transaction of bodies and consciousness, whose intensity rarely survives its lived moment. Sex writing, a modern enterprise, ventures to write sex: pure, clean, empirical almost. But to ignore the pornographic would be senselessly restrictive. Literally "the writing of harlots," pornography has ancient and primal roots in kindling lust, working as both a substitution for and supplement to actual sex. Generally belittled for its crude goal of arousal, the "low form" of pornography offers the writer a singular chance to interrogate Western culture's hostility to bodies and pleasure. Before we workshop, we will read a few prototypes of sex writing and pornography, which is the binary from which we build. This is not a class for the faint-hearted. Whether we approach it objectively or provocatively, representing sex is almost always transgressive. Our frank and robust conversations on erotic content will have equal rigor as our discussions of clauses, punctuation, and syntax.

conjuring of these spaces? We will be asking these questions and many more as we examine what these imaginative spaces are, how they are made, invested with life, and kept alive. Readings and writing prompts will help us explore this ambiguous terrain that can be seen, in the words of the poet Peter Gizzi, as "100% real and 100% imaginary." We will be especially interested in the role of death in all this, in how poems make it possible to live a distant and yet intimate companionship with the dead and the living, a companionship we might choose to call "necrosocial." The political possibilities-and limits-of literary (necro)sociality will also be a concern. The course reading list may include work from Jack Spicer, Claudia Rankine, Dorothea Lasky, Fred Moten, Alice Notley, John Ashbery, Graham Foust, Dolores Dorantes and John Keats.

Description

Poetics and Practice: Projects, Translations, Interventions, Rupture, Static

This course will explore the interplay between the context and the poem, between place and craft, poem as intervention. Craft not as a pound of product but as process or flux, form that can fold into mutation. Close reading of poems with a view to what still lives for you. With "galleries" of Futurists, Dadaists, Surrealists, etc. in Jerome Rothenberg's Poems for the Millenium as a guide, we'll survey poems and poetics in context for discussions in some depth of interrelations between language and aesthetics, between manifestos and politics. Students will explore poetics in specificity and select relevant examples to share in presentation and selections from personal projects to workshop as poems.

Description

To cite the program webpage, "The Creative Writing MFA was designed to get over the division between 'creative' and 'critical.'" In the spirit of this commitment, this reading-focused seminar will be devoted to distinguished poet/critics who write across multiple genres. Reading their creative and critical work side-by-side will both broaden and sharpen our writerly repertoires as we consider a number of discursive traditions and conventions. With an eye towards the craft of criticism, we will also discuss a range of professional and rhetorical concerns (publication venue, target audience, overwork and exhaustion in the age of the downsized neoliberal university). While there are, to be sure, multiple lineages of poet/critics within literary history (from Virgil to Laura Riding, from Alexander Pope to T.S. Eliot), we will concentrate on contemporary practitioners for the sake of focus. We will read a substantial amount of literary criticism, but we will consider figures who engage with varied artistic media-for example, we will study Amiri Baraka's music criticism, and/or John Yau's art criticism. Other poet/critics may include Nathaniel Mackey, Rachel Blau Duplessis, Srikanth Reddy, Evie Shockley, and Fred Moten. Final projects may include critical seminar papers, a series of reviews geared toward periodical publication, or hybrid works that combine both creative and critical ambitions.

Description

Against Prescriptive Nonfiction/Write Your Own Prescription: Books about writing and creativity are nonfiction documents in and of themselves. Whether "guide" or "handbook," these texts are imperfect and for some, may lead us into prescriptive ideas about "how to write." In Against Prescriptive Nonfiction/Write Your Own Prescription, we will explore texts both recent and not that tell us how to write with an eye for what works for each of us individually as nonfiction artists and what does not. We will actively engage with the texts by experimenting with the assignments each text offers, keeping a journal on what works and what doesn't, as well as creating fresh, new assignments that we'll come up with inspired by the texts. Over the course of the semester students will present background on the material we read, as well as writing exercises, both from the texts and from the imagination with the aim of developing one's own aesthetic practice. Each class will involve writing, experimenting, and learning/unlearning from the texts we discuss. Students will produce either a final portfolio or an in-class presentation, each of which will consist of a mini-guidebook that includes experiments/exercises, as well as examples of original creative nonfiction work that was made using said experiments/exercises.

Description

Juicy Memoir: Personal Narratives of Culture, Body & Soul

In this class, we will read, discuss, and write juicy memoirs--personal narratives that reveal, reflect, and trace the self in relation to family, society, history, culture, memory, body, and soul. What makes a memoir juicy? As accounts of addiction, tragedy, and abuse crowd the field, some might say lurid and sensational content. While the memoirs here all tell compelling stories, their juiciness relates to candor, surprise, insight, urgency, and originality in their literary style. From best-selling blockbusters to small press experiments, these memoirs arrive from around the world, grounded in specific social, political, embodied locations. Bursting with flavor and energy, these written reckonings will inspire our own.

Students should expect to spend approx \$150-\$180 on books.

Description

Translated Bodies: Reading & Writing Literary & Cultural Translations

In this class, we will consider translated bodies--bodies that shift/ have been shifted from

one state to another. We will read and discuss non-fiction, fiction, poetry, and performance writing. In these texts, we will regard bodies in states of emergency, desire, trauma, power, and literary magic. Following disability scholar Tobin Siebers, bodies here will also be understood as physical, cultural, historical, literary, and artistic forms. We will also notice how bodies are raced, gendered, classed, colonized/ decolonized, sexually oriented, socially constructed, and memorialized. Traditional notions of literary value will tangle with cultural appropriation, heritage, and exchange. Sparked by the possibilities, we will try our hands at literary translation and experience the translation of our own work. Engaging migration, family, love, loyalty, and resistance, we will record the translated bodies in our own lives and languages. Re/marking these translations, we will build new bodies of work (in our work). We will transform our own writing and be transformed.

Students should expect to spend \$150-\$180 on books for this course.

Description
Writing the Braided Essay
The braided essay is the name gifted to a form of essay writing that weaves together multiple threads of thought--memory, critical analysis, cultural commentary, and other art form--to create this contentious form we call "the essay." From the French essais, "to seek" or "to wander," the essay's Western origin already implies this gradual accrual of thought, ideas, and discovery. In "Writing the Braided Essay," we will explore Western and non-Western iterations of the braided essay, experimenting with non-traditional forms such as the photo essay (using text and images) and the zuihitsu, that might allow us to best express our unique and tender obsessions in writing. This workshop invites close reading of braided essay examples from writers such as Lidia Yuknavitch and Melissa Febos in addition to that of our peers. With ample space for experimentation and generative writing, students will have the opportunity to workshop and fine-tune their braided essay-in-progress twice throughout the semester. By the end of the class, students will have fashioned all the threads of their braided essay into one cohesive and revised work.

Description
Consider the following recent writing projects-a poet travels to her home state of Indiana in search of remaining traces of the Underground Railroad; another reproduces newspaper excerpts about mining disasters in China, interleaving them with photographs and worker transcripts regarding the 2006 Sago Mine disaster in West Virginia; yet another composes a long poem that only uses words from titles, catalog entries, or exhibit descriptions of Western art objects that depict a black woman. "Documentary Poetics" will assess this documentary turn in early twenty first century poetry. If, according to Horace, poetry is meant to "delight and instruct," then a major strand of contemporary poetry is now embracing-over and against a delightful lyricism-a pedagogical, historical, or memorializing function. We will study important modernist precursors such as Muriel Rukeyser and Charles Reznikoff and then proceed to a range of contemporary practitioners including M. NourbeSe Philip, Rob Fitterman, Mark Nowak, Craig Santos Perez, and Claudia Rankine. In addition, reading thinkers from Michel Foucault to Erwin Panofsky to Maurizio Ferraris will bolster our sense of what we mean by the term "document." This class will be a reading-focused seminar and may include student presentations and an opportunity to workshop. The final project will be a chapbook-length work that significantly draws on pre-existing documentation though critical papers may be submitted pending instructor approval.

Description

Writing, Culture & Sound

In this seminar, we'll explore sound and sonic phenomena across genres, disciplines, and soundscapes. We'll read texts that depict music, voices, and ambient sound with remarkable precision. We'll listen to performers, producers, and sound artists who work with live and recorded sound. We'll visit galleries and other acoustic spaces, while reading theory and criticism that will help us to attend to human and nonhuman sound and the idea of acoustic ecology.

One goal of the course is to sharpen our ears and further develop our "close listening" (Charles Bernstein) skills. But another is to find new ways to re-hear, rather than re-vise, our own work and practice. Accordingly, we may investigate the problems and possibilities of sound in such wide-ranging areas as theater, film & television, sound art, musicology, urban planning, and/or architecture. We will balance some of the more utopian claims about sound culture against readings in deaf studies and the art of deaf artists such as Ilya Kaminsky and Christine Sun Kim.

Along the way, we'll consider questions about sound and identity, and the sonic double consciousness of immigrants, refugees, and displaced people. We'll rehash old arguments about music versus poetry, about visual bias in literature and philosophy, and consider whether soundscapes of pre-phonograph eras are inscribed in their literature, and the extent to which audio technology influenced art movements of the twentieth century.

I invite students to bring their own projects to the course, and to respond to prompts with creative projects and/or critical writing.

Description

How does anyone dare to write? Mostly beside oneself, and in the investigation of these sites of "besided-ness" lies the focus of this class. We can speak of many para-"sites": para-phrase, para-normal, para-legal, para-military, para-medic, para-lysis, para-psychology, para-phernalia, para-noia, para-dise, para-llel,

para-lax. These para-digms carry with them, para-doxically, a sense of deviation and displacement from any set of stable rules or genre orthodoxies. In Parafiction, writers typically take the liberties of a novelist or short story writer into the obligation of biography, memoir, essay, rhetorical criticism, even poetry. But therein lies the rub: this multiply voiced effort at imposed meaning, narrative order, and authorial authority empties and exposes itself as it becomes ethically, aesthetically, and ontologically problematic. We cite ourselves from multiple sites of authority as we become parasites of our own attempts at authenticity. For Spring 2020, this critical seminar, which will also have a subsidiary workshop component, will concentrate on ekphrastic hybrids where authors bring memoiristic and auto-fictional elements to inhabit, or be possessed by, the work ("the bibliography) of another artist, author, or filmmaker.

Description

"Exit Strategies: Professional Development for Writers" is exactly as it sounds-- a course the helps develop a set of tools and skills one needs to exit one place and enter another. The entry, in this case, refers to any number of possibilities and paths for the writer seeking to develop the longevity of their writing life beyond this institution. In the course students will work on

1. Creating Future Visions.
2. Cultivating Professional Practice and
3. Maintaining Creative Life.

Description
This course addresses the crisis in feeling-in emotion and affect-in the wake of the so-called "death of theory" and "end of the subject." What remains for writers of a critical perspective on the emotions they deploy, portray, and animate in their work? Does feeling vanish with the disappearance of the subject? Has the subject in fact disappeared? Beginning with the "birth" of the modern or modernist subject in psychoanalysis, we will examine through a wide variety of readings the persistence of affect from a number of psychoanalytic, cognitive, and post-theoretical perspectives and, in this light, workshop excerpts from student writing. Students will be responsible for at least one workshoping of their own work and approximately three presentations of readings.

Description
While we may be accustomed to working on a poetry book one single lyric poem on a page at a time, this course will invite us to look at the enduring long poem, one that spans multiple pages, and which may transform the trajectory of a larger poetry project. Drawing from Jane Alison's Meander, Spiral, Explode: Design and Pattern in Narrative, we will consider "text as texture," approaching our writing across multiple pages with curiosity about shape, movement, and feeling. We will look at book-length experimentations with poetic form that include Yanyi Luo's The Year of Blue Water, Aisha Sabatini Sloan's Borealis, Renee

Gladman's Calamities, Jenny Boully's the body: an essay, among others. These writers and their accompanying works will be the inspiration point for students looking to reinvigorate writing projects that might feel stuck or looking to expand existing work beyond its current form. In addition to generative writing, this course is also part workshop where students will learn to critically engage with their peers' respective projects through constructive feedback and find appreciation for different styles of writing approaching the same aims.

Description
Long Form Fiction Workshop: Writing Very Long Stories, Novellas, and Novels

This course will focus on writing longer forms of fiction. We will read a selection of longer stories, novellas and at least one novel as a way of thinking about what makes longer work effective and what the pitfalls are of trying to write it. We will pay special attention to form, to what longer fiction can achieve that shorter fiction can, and to style. Each participant will regularly turn in work for critique, and the goal of the class is to write several longer stories, or one novella, or part of a novel.

Students should expect to spend approx. \$50 on books and supplies.

Description
POETRY, FORM, AND RESISTANCE
This course is first and foremost a poetry workshop. We will draft new poems and share them in a supportive setting that will prioritize process and possibility over polish. The poems we will study, and the prompts and exercises we will respond to, will focus on form and the ways that poetic forms - inherited, (re)invented, modified, broken - can be deployed as a form of resistance. If the sonnet, as Solmaz Sharif writes, is a form of fascism, then what does it mean for trans writers, writers of color, and women such as Jos Charles, Jericho Brown, and Diane Seuss to write in (and against) the sonnet? How do the poems in poet Fady Joudah's most recent book, [...], make use of silence and erasure in order to condemn silence and erasure? We will consider poems that resist a range of forces: capitalism, amnesia, censorship, occupation, dehumanization. Inspired by Douglas Kearney, we will invent our own new forms, and workshop the forms themselves.

Description
At this transforming moment of pandemic and uprising, what can letters and conversations do? What forms of letters can we circulate? What conversations do we need? Grounded in black feminist texts and pedagogy, this creative writing class invites students to read and compose a broad range of letters and to conduct, join, and listen to a broad range of conversations. Letters and conversations here encompass fiction, nonfiction, poetry, and hybrid writing as well as performance, visual art, tweets, podcasts, and more. Key course topics include ancestors, childhood, friendship, love, family, sexuality, gender, race, sexual violence, police brutality, trauma, and coming of age. The main course project will embody or spark from "a letter you need write but have never written or a conversation you need to have but have never had." We will write letters to former and future selves. We will claim voice and risk vulnerability. From social media posts to talk

experiments, we will navigate forms of address, intimacy and attention, audience, expression, and occasion.

Description
We are currently living in what Yasemin Yildiz calls "linguascapes" of globalization: a multilingual din amplified by mass migration, the movements of refugees, and technologies like machine translation. Uncommon combinations of language are constantly emerging. Taking poets such as Brandon Som, Cathy Park Hong, and Jos Charles as models, we will incorporate heritage languages, dead languages, invented languages, and dialects in our poems; we will complicate the idea of writing in English by remembering to ask whose English we are writing in and why. By doing so, we will consider whether multilingual poetics can "attack the basis of language," as James Baldwin says, while at the same time expanding its expressive possibilities.

Prompts and open-ended assignments may include use of words, grammatical structures, poetic forms, literary/performative conventions, and/or writing systems from other languages. Additional assignments will ask students to create speculative languages and the worlds in which they are spoken. Final portfolios might consist of individual poems that experiment with language in multiple ways; they might also consist of loose narratives, or a series that focuses on one or more non-English languages.

Course Long Title
Poetry as Ecological Practice

Subject Code Course Number
CMWP 683

School(s)
School of Critical Studies

Academic Level
GR - Graduate

Credit Hours

Min Credit Hours:
3

Description
This exploratory poetry writing course proposes a collective investigation into the intersection of poetic practice with the idea--or the dream--of ecological practice. In other words, the class is interested in how poem-making as a human form or practice of living might be taken up as part of ongoing efforts to live more ecologically oriented lives, lives understood to be inseparably entangled with other non-human forms of earthly life.

The class is frankly undertaken under the pressure of climate breakdown, in which circumstance it is no longer possible--one hopes!--to ignore how centuries of developments in human agriculture and the general human technosphere--including, most dramatically, the ongoing legacies of colonialism and globalized fossil-fuel based capitalism--have pushed so much of the non-human world to the point of extinction (or past it). In this course we will seek to challenge the ways our own literary and other life practices might center the human at the expense of other forms of earthly life. North American English language poets such as dg nanouk okpik, CAC Conrad, Larry Eigner, Mei-Mei Berssenbrugge, Sherwin Bitsui and others may assist us in our efforts. We may also seek out the help of poets in translation from other places and times. Additionally, in the course, we will read nonfiction prose to make sure scientific and political perspectives on ecological thinking and climate breakdown remain prominent in our aesthetic conversations. On the way we will be paying special attention to poetry as a daily life practice--oriented as much or more towards the transformation of the practitioner as towards the communication of a specific ethos. All participants in the class will produce a body of work in poetry which engages, in its way, with the problematics and strategies encountered in the course. Frequent writing prompts will be provided to help instigate student writing as needed. The second portion of the course will be given over to the presentation and workshoping of student work.

Description
This workshop will focus on extremely short pieces as a way in to writing narrative and non-narrative prose. We'll read flash fiction, sudden fiction, blast fiction, short-shorts, microfiction, minimalist fiction, prose poems, Anne Carson's short talks, Lydia Davis's work,

John Keene's Annotations, Ben Marcus's fake instruction sets, etc., and use these to think about the limits of what prose can do in a condensed and linguistically focused space. We'll think about the sentence as a unit of meaning and as an aesthetic gesture, discuss the acoustics of prose, rhythm and sound in fiction, and so on. The heart of the class will be workshoping your short pieces and a final project.

Course Long Title
Queer Entanglements

Subject Code
CMWP

Course Number
687

School(s)
School of Critical Studies

Academic Level
GR - Graduate

Credit Hours

Min Credit Hours:
3

Description
Queer questions have been in the air for over a generation, beginning with resistance to binaries of male and female or gay and lesbian, and extending to anyone who refuses heteronormativity. As an embrace of the vital position of the outsider, queer refers to "the open mesh of possibilities, gaps, overlaps, dissonances and resonances, lapses and excesses of meaning when the constituent elements of anyone's gender, of anyone's sexuality aren't made (or can't be made) to signify monolithically." (Eve Kosofsky Sedgwick).

This course combines a set of readings in queer texts with a workshop attentive to the genre distinctions of fiction, non-fiction, documentary, auto-fiction, and poetic practice. It demands if the queer position necessitates a queer modality, a newly evolving language. It posits queerness as a hybrid status, intersectional, always re-made by every generation, with a problematic relationship to existing forms, to narrative, criticality, the poetic figure, and the demands of closure. It asks if every new queer moment requires a re-examination of form. Among class readings are memoir, fiction, self-documentation, auto-fiction, trans-texts, science fiction, and theoretical screeds.

Authors may include Paul Preciado, Roland Barthes, Samuel Delany, Kevin Killian, Lauren Berlant, Gloria Anzaldua, Jean Genet, Audre Lorde, William Burroughs, Juliet Jacques, Andrea Lawlor, Jose Esteban Munoz, Monique Wittig, Jack Halberstam, or

Kathy Acker. The readings will be tailored to the class's participants, who will also workshop one text of their own, a new or developing work, short or chapters of a longer practice, and of variable or evolving queer form. According to Jose Esteban Munoz, "Queerness is not yet here. Queerness is an ideality. Put another way, we are not yet queer, but we can feel it as the warm illumination of a horizon imbued with potentiality.. The future is queerness's domain."

Description

What is a self? How might writing and performance together help forge or express its possibilities? Grounded in creative writing and drawing on performance art, literature, art criticism, cultural studies, and black feminist theory, this class will open space for creative writers to write and perform the self. Students will read personal/ autobiographical / performance texts, see live and archived performance, and keep persona journals. Key course topics will include embodiment, memory, autobiography, persona, subjectivity, disclosure, tracery, gesture, and action. We will also reckon with the self in relation to race, class, gender, sexuality, and other vital sites of identity. Class readings, exercises, assignments, and showings will help students develop their writing/performing practice over the course of the term. Together we will activate writing as performance and vice versa in the self/in the world.

Description

"Poetry Workshop: The Good, the Bad, the Better, and the Otherwise."

This course will function primarily as a poetry workshop, which is to say we will produce new writing to share for supportive group critique. In this way, we will strengthen our critical and creative faculties, which drive our aesthetic choices, by discussing how and why we make the particular texts that we do. In addition, we will particularly focus on questioning various sets of criteria (formal, historical, cultural, political) of how poetry is evaluated in order to refine and develop our ambitions. The goal, of course, is to make our writing better. Nevertheless, conceptual poet Craig Dworkin has usefully speculated what would happen if our concern "were no longer whether it could have been done better (the question of the workshop), but whether it could conceivably have been done otherwise." While needn't privileging a conceptualist stance, we can explore the potentiality of "otherwise." Our poetry writing will be supported and inspired by a set of eclectic readings (poetry that's good, poetry that's bad, poetry that's so bad that it's good, poetry that is good in some ways but bad in others, poetry that can do better).

Description

Nonfiction has the potential to be something more than what readers expect, and every writer has a variety of choices to make in determining what shape to craft their work depending on the subject. A profile of an artist may include the author's interactions with the subject; reportage might be interrupted by the personal. A book of one's dreams can be designated a "dreamoir"; a text of literary or social criticism may contain memoiristic elements. Writing about the self can be joyous and funny, as well as challenging and complex. Writing artfully about others while maintaining an anchored I or self for the reader takes skill in the form of wide reading, and deep, ongoing practice. In this class, we will look at some forms within

the nonfiction genre, roughly described as Profiles, Humor, Experimental, Reportage, Distillation of a Nervous System (shout out to Margo Jefferson, who we'll be reading), and Literary and Social Criticism. Using the required texts, articles, and podcasts, we'll examine these forms and their uses, and generate new work week to week that uses these forms as learning models. The class will not be a traditional workshop, but more a weekly conversation in which students will share their experience with the selected forms via the readings, and receive informal feedback and revision strategies on the written assignments produced. The practice in forms will culminate in a final portfolio that will include a minimum of three of the forms described.

Description

SUBLEVEL is an online literary magazine devoted to the nexus of literature, poetics, art, criticism, philosophy, culture, and politics based in the CalArts MFA Creative Writing Program, in The School of Critical Studies. SUBLEVEL inherits and reflects the dynamism of contemporary Los Angeles

as a hub of literature, art, and activism, while also stretching beyond our locality.

We make no hard distinctions between creative and critical approaches, but rather celebrate writing of any kind that we find stimulating, timely, or otherwise compelling. Each year one edition of SUBLEVEL is produced on our online platform, and includes commissioned and open-call submissions of original essays, interviews, fiction, poetry, roundtables, hybrid forms, and other features. There is also a distinct annual print component, SUBLEVEL B-sides, which highlights original content not available in the online publication. SUBLEVEL often hosts panel discussions, events and readings as part of community building and promotion of the magazine. This class offers a unique opportunity to develop your voice in the context of others but also to work towards producing something that will take place in the world and last beyond your residency in the Program. The course is therefore a combination of on-the-job training and a professional survey and assessment of the field, in which you develop and leverage the skills of making things happen and team work, which at the same time requires a sharp imagination, a reflexive mind and critical eye on the development of new content that is timely and takes a leading role in showcasing the cultural and artistic conversations that are rising right now.

Description

Genetics has revolutionized the way we understand who we are, and where we came from. Modern genetics has opened the door to exciting and controversial new pathways that can guide where humanity might be going. This course begins with the fundamentals of how genes store, use, and pass on information to the next generation. With these fundamentals are under our belts, we can shift our focus to the impact of modern genetics on society.

The history of genetics has been stained by the eugenics movement and efforts to "use science" to support certain ideologies. We will look at how modern genetic analyses, using the scientific method, have challenged and disavowed the idea that a biologically based concept of human race

exists. In doing so, we gained insight into a prehistory of humans that had been recorded in our genomes. Through a series of case studies, we will investigate what genetics tell us about complex behavior. We will look at the discovery and problematic characterization of a single gene (called MAOA) as a cause and thus potential predictor of aggressive and violent behavior. The story behind the MAOA gene is a story of how poor scientific communication, combined with the pseudoscience of eugenics was able to influence the judicial system and ultimately required an intervention by the Supreme Court. We will see how powerful new techniques have shed light on the genetics of sexual orientation and gender identity and see how researchers have improved upon the way they communicate this type of research to the public. By contrasting different methodologies, we will see how the "Nature versus Nurture" (genetic versus environmental causes) debate has become more nuanced. We will explore how scientists, sometimes willingly and at times unwittingly engage in conversations about the ethics of scientific discoveries as we explore molecular technologies that have revolutionized areas as diverse as agriculture, medicine, and law enforcement.

As a Level-100 Special Topics course, you will participate in weekly writing workshops related to the course material. This will help you to develop the skills needed to become a more confident and effective writer during your time at CalArts and beyond.

Description
Human Sexuality is a comprehensive and integrated approach to the science of human sexuality. This course is an evaluation of scientific knowledge regarding sexual behaviors and attitudes in contemporary society and includes the physiological basis of sexual function and dysfunction.

During this course students will become fluent in the academic language and theories of human

sexuality such as sexual anatomy, response cycle, reproduction, contraception, sexually transmitted infections, intimacy and others. Students will learn to read and evaluate scientific articles and findings in human sexuality. Students will be introduced to the multifaceted aspects of this field which will help increase their understanding of how human sexuality is influenced by and influences other parts of our lives. These topics will help students understand the biological, psychological, social, and cultural influences on their sexual feelings, attitudes/values and behaviors.

Description
Environmental Science: An Introduction to the Problems and the Solutions.
This course provides an introduction to the interactions between the physical and biological impacts human have had on the Earth's environment. Through a series of lectures, we will evaluate how our actions impact the Earth. Specific topics will range from pollution, to meeting needs for energy and food for the Earth's increasing population. We will read a selection of foundational texts that mobilized environmental activities and critique how well these movements have responded to the issues they seek to address. We will examine how our psychology, legislation, markets and emerging technologies act to improve or degrade the environment. Students will debate the issues and proposed solutions as individuals through essays and in groups through projects that outline real world solutions.

Description

Creative Experimentation and Reasoning in the History of Mathematics

In arts and humanities, mathematics is often thought as a rigidly formal discipline. The aim of this course is to portray mathematics in a different light as a field where intuitive thinking, formal rigor and creative experimentation come hand in hand. To do so, this course provides an introduction to the history of mathematics with a particular emphasis on mathematical discoveries from the antiquity to the present time. By looking at different case studies and examining thoughts and methods behind these discoveries, the class aims to acquaint students with both conceptual / intuitive and formal / quantities aspects of mathematics. It is in bridging these two aspects of mathematical thinking that we can grasp the significance of theoretical and applied dimensions of mathematics not only for special sciences but also for arts and humanities.

Credit Hours**Min Credit Hours:**

3

Description

Number, Numeral, Shape and Structure. This course explores the nature of mathematics starting with how the human brain conceptualizes numbers and how human cultures have represented numbers through the use of oral and written language. Through a series of lectures and readings, we will examine how a wide range of cultures developed mathematical ideas such as zero, the infinitely small and the even idea that there are types of infinity that exceed what you might think of as infinity. We will see where geometry and algebra are similar and how mathematicians discovered entirely different ways of conceptualizing the Universe by challenging what they thought was know about "truth" and "proof". This course provides a general survey of

some of the major ideas in mathematics and as such puts far less emphasis of how to make calculations and places much more emphasis on how mathematics have enabled humanity to understand patterns and how that understanding helps us to make further discoveries. Short essays and problem sets will be assigned but students will also complete a final project where they critically engage a mathematical concept through the arts.

Description

Human Body: Food to Function.

Through a series of lectures, demonstrations and readings, we will survey the human body from a molecular level. This course will begin with a discussion of atoms, the building blocks of food, and will end with how a complete human body senses the world around it. We will survey the basics of nutrition including carbohydrates, fats, proteins, vitamins, minerals and how they relate to our metabolism. With these concepts in mind, we will be able to see how the body puts our food to work. For example, how does the body convert breakfast into muscles that can contract and enable motion? How do certain vitamins help our eyes turn light into images? How do minerals help transport a range of substances and even information throughout our body? Students will apply what they have learned to problems that can be answered with short essays and to critiques of media presentations on health issues. Finally, students will apply concepts from class to creative projects that reflect upon and critique concepts from the course.

Description
Matter and Molecules: From the Eve of Atoms. There have been many ideas about what the physical universe is made of. Through lectures and readings, we will consider a range of ideas from the history of chemistry. This is a history that spans alchemical perspectives such as The Philosopher's Stone and the transmutation of lead into gold all the way through to the quantum mechanics. It also includes pivotal missteps that, while ultimately wrong, helped move humanity toward a better understanding matter. This is also a hands-on science course, where we will conduct set of simple experiments with far reaching consequences. These will not only reveal natural laws, they also illustrate how we can harness mathematics to peer into phenomena we

cannot directly or easily observe. By the end of the course, we will turn to more contemporary ideas of the atom. With a very basic understanding of quantum mechanics, we can begin understand the more than 100 elements found on the periodic table. You will prepare descriptive lab reports, some involving simple mathematics and the construction of graphs. In addition to short essays and problems sets, there will be a final project where students can explore and depict concepts from class in both a critical and artistic ways.

Description
This course examines the ways in which biodiversity is conceptualized, measured, and valued. This is also a course that explores how biodiversity is threatened by human activity and how humans are trying to prevent and even restore biodiversity. Basic concepts of population, community and landscape ecology are combined with issues that arise from legal, economic, and cultural/aesthetic perspectives. We will explore conservation efforts at scales that range from being very limited in space and that are species specific to proposals that span continents and multiple ecosystems. We will compare conservation strategies that arises from habitat loss, habitat fragmentation, pollution and climate change. At the end of the course, students will be able to place conservation efforts into contexts that consider the specific causes of biodiversity loss and the consequences of allowing the loss to continue and potential costs, not exclusively monetary, that often go along with fixing the problem.

CSCM328 - Practical Economics

General

Course Long Title
Practical Economics

Subject Code	Course Number
CSCM	328

School(s)
School of Critical Studies

Academic Level
UG - Undergraduate

Credit Hours

Min Credit Hours:
3

Description
The course is aimed to introduce concepts and tools of basic economic analysis at both micro and macro levels. This course provides a non-technical introduction to the basic concepts in economics, with a focus on the United States. It will provide instruction in the nature and function of product markets (supply and demand), economic decision making, types of economic systems, economic growth, recession and inflation, income distribution and wages, and fiscal and monetary policies. Using these fundamental economic concepts, this course provides a foundation for informed decision making regarding current economic debates. In areas in which there is considerable disagreement about economic analysis or about the nature of the real world, the course explores the issues underlying the disagreement. There will be a strong emphasis on how economics is related to current events.

CSCM331 - How Food Makes the Human Body

General

Course Long Title
How Food Makes the Human Body

Subject Code Course Number
CSCM 331

School(s)
School of Critical Studies

Academic Level
UG - Undergraduate

Credit Hours

Min Credit Hours:
3

Description
This course examines molecules as the fundamental building blocks of the human body. The course begins with the basics of atoms and chemical bonds. You will then learn how molecules are put together to form basic nutrients which are the building blocks of our food and, of course, the building blocks of our bodies. Along the way, you will see how food preparation can alter how these molecules interact with each other and within your body. You will explore the science and politics of diet, obesity and their relationship to public health. We will consider how various nutrients and

food items went from popular culture/nutrition "hero" to "super villain" (and the reverse, in some cases). We will look at the causes of these shifts and how culture/society went with or against solid scientific evidence. The class will take part in critically engaged explorations of diet with perspectives that combine biology and sociology. You will be able to apply this level of criticality to your own decisions about nutrition and food. The last segment of the course combines what was learned about molecules to the study of muscle contraction, and to our senses (taste, touch, sight, smell and vision). You will gain an appreciation for how molecules work together to allow humans, or any animal, to experience the world. Course content is primarily delivered through lectures but there will be many hands-on demonstrations, some involving food and some experiments that can be done in the kitchen. The main assignments include a critical analysis, involving primary scientific literature, of diet and human health. There is also a final project where students will present and critique what they have learned. The format of the final project may be through text and/or their preferred métier practice.

CSCM341 - Art and the Brain

General

Course Long Title
Art and the Brain

Subject Code Course Number
CSCM 341

School(s)
School of Critical Studies

Academic Level
UG - Undergraduate

Credit Hours

Min Credit Hours:
3

Description
Have you ever wondered what happens inside your brain when you are creating or looking at art? This course explores the neuroscience behind artistic experience, from the creative generation of ideas to how we perceive and emotionally respond to artworks. By examining perception, emotion, attention and creativity in context of both neuroscience and art, we will come to an understanding of how art expands the experimental and epistemological space of discovering unique insights into brain functioning. No prior scientific knowledge is required to join this course.

CSCM347 - Finding Signals From the Noise

Course Long Title
Finding Signals From the Noise

Subject Code Course Number
CSCM 347

School(s)
School of Critical Studies

Academic Level
UG - Undergraduate

Credit Hours

Min Credit Hours:
3

Description
Fin this course, we will examine how to ask and answer questions through the analysis of data. Through a set of lectures, you will become familiar with the basic principles and methodologies of statistics. This will allow you to make comparisons, test hypotheses, discover relationships and make predictions. We will see how to reveal hidden patterns by removing "noise" and amplifying a "signal" from within data. We will look at the history of data analysis within the natural and social sciences and see how in the current era of "Big Data", politicians, businesses, non-profits and artists harness and contribute to these methods. In addition to the lectures, students will work in groups to construct their own data-based projects. The ways to present these projects are almost limitless as they may be in the form of infographics, models, sonifications, or performances, just to name a few.

Description
Sex and Death: Biology From Beginning To End.

Biology is the scientific study of life. An individual's life begins through a process of reproduction. Reproduction may be either asexual or sexual, and in some species both may occur. Regardless of modality, successful reproduction is contingent on the individual's ancestors' ability to have survived long enough to reproduce. The differential survival of individuals may lead to evolution by natural selection, another hallmark of 'life'. In the case of sexual reproduction, an individual's immediate ancestors also had to find a mate and thus also had to beat the odds against a force called 'sexual selection'. Because of intrinsic trade-offs between the ability to survive and the ability to reproduce, death is inevitable and is thus perhaps also a hallmark of 'life'. This course is organized around the biology of life histories (patterns of reproduction and death). Perspectives from anatomy, behavior, ecology, evolution, development-mental biology, genetics, neuroscience and physiology will be brought together to understand life. All life forms will be considered but there will be an emphasis on the biology of humans. Towards our more complete understanding of 'life' in the context of humans, we will conduct a class project on human reproductive behaviors and examine some technological advances for controlling our reproduction and lifespan.

Course Long Title
Fuzzbox Physics and Popular Distortion

Subject Code	Course Number
CSCM	373

School(s)
School of Critical Studies

Academic Level
UG - Undergraduate

Credit Hours

Min Credit Hours:
3

Description
Fuzzbox Physics and Popular Distortion
This is a hands-on exploration of sound amplification and distortion. Through this course, students will understand the relationship between human perception and acoustic media. The course explores acoustic instruments and the human voice,

amplification, and how how stereo systems at home and in vehicles changed music and how this made distortion into an aesthetic.
We will start by studying resonance and how bodies and acoustic instruments amplify sound. We will consider different strategies for amplification in air, wood, tubes, and solid-state electronics. Students will experiment with harmonic frequencies and signal transmission in various media and consider how these physical effects are represented by amplification.
We will turn to electronics and the kinds of distortion that they introduce especially the differences in distortion produced by vacuum tubes and solid-state electronics. We will consider the relationship between distortion produced by vacuum tubes, solid-state electronics, and digital effects.
We will also study vinyl records, microphones, and guitar pickups to see what they capture and how they render sound waves into electricity. We will explore the differences between mechanical, magnetic, and piezo-electric listening devices and the signature sound of each approach.
The course closes with an exploration of early digital sound synthesis.

Description
Signals in the noise: Data Science. In this course, you will learn the fundamentals of how to ask and answer questions through the analysis of quantitative data. Data science has become increasingly important as organizations, both commercial and nonprofit, are becoming "data informed" (a more accurate expression than "data driven"). Data science can also be a helpful tool for artists and activists who need to interpret complex patterns described by others or enable you to uncover patterns in data that speak to your specific areas of interest. Through a set of lectures and hands on exercises, you will become familiar with the basics of data collection, descriptive statistics, hypothesis testing, and modeling data to describe simple patterns. We will also look at how models can remove "noise" and amplify the "signal" when data contains latent or obscured patterns. We cover the basics of data visualization and introduce a couple platforms to

get started with data analysis. Throughout the semester we will look at the history of data analysis within the natural and social sciences, consider issues that arise from the era of "Big Data", and finally see how politicians, businesses, non-profits and artists can harness and contribute to these methods. A major part of the course will be conceiving of and working on your own individual or small group project. Each project will ask and attempt to answer a question will data. You will present your question, lead the class in discussions on ways to approach finding answers and ultimately present what you discovered. The formats in which these questions and answers are presented are almost limitless as you may choose among infographics, models (of many types), sonifications, and even performances.

Course Long Title
Biology of Politics

Subject Code Course Number
CSCM 425

School(s)
School of Critical Studies

Academic Level
UG - Undergraduate

Credit Hours

Min Credit Hours:
3

Description
"Nothing in Biology Makes Sense Except in the Light of Evolution" is the famous quote and title of an essay by the evolutionary biologist Theodosius Dobzhansky to address the highly politicized debates over the teaching of evolution in the 1970's. In this course we will replace "biology" with "politics". Throughout the course we will critically examine the evidence for and against the idea that aspects of human sociality have both a genetic basis and evolutionarily adaptive purpose. To construct an informed critique, modern methods used to disentangle "Nature versus Nurture" will be presented and evaluated. With these tools and results, we can then consider if there is an evolutionarily adaptive purpose for behavioral and personality traits associated with political ideologies such as: empathy, aggression, social trust, attitudes towards authoritarianism, continuums from individualism to collectivism, and many more. To further the critique, we will have to look at modes of natural selection that expand the standard model where only selfish genes prevail and altruism is destined to extinction. These models include game theory and are supported with the results of experimental economics. In addition to grappling with the genetics, we will have to

confront the psychometric tools used to measure human behavior and personality. Recent advances in neuroscience, epigenetics will add the final layer to our investigation. Through a series of lectures, discussions of recently published studies, reviews and class activities, students will draw their own conclusions about the current political state of our species, Homo sapiens. And finally from this, make and support predictions about our future.

Course Long Title
"..With Some Degree of Certainty"

Subject Code Course Number
CSCM 428

School(s)
School of Critical Studies

Academic Level
UG - Undergraduate

Credit Hours

Min Credit Hours:
3

Description
The course provides an introduction to economics through the primary method of economic reasoning: the conceptual model. Models are deliberate simplifications and abstractions used to develop clarity and insight into real world processes. This course introduces many of the most critical insights from a spectrum of economic theory (opportunity cost, human capital, comparative advantage, effective demand, exploitation, etc.) through direct engagement with economic models, the issues they refer to, and the examination of artworks that embody them. Emphasis is placed on developing students' critical engagement with models and statistical reasoning, encouraging the creation of new models and quantitative engagement with the contemporary world.

Economists - like artists - are obsessed with representing the world and imagining its future. Economists, compared with artists, employ a limited range of expressive forms, chief among them is the economic model: the deliberate abstraction and simplification of the world for clarity and insight.

For at least the last two hundred years modeling has been a principal activity of the economist. They make models of the economy as a whole, models of the market, models of production, models individual behavior. A casual observer might think that the economist's mania is focused on quantifying experience and finding numbers where

there are none, but the game goes deeper than that. Quantification on its own merely describes what already exists. The aim of the economist is something grander: to visualize the future.

Of course, this is not generally what economists admit to doing. The definition of economics is dressed up with jargon like "the allocation of scarce resources among diverse ends" or "the science of choice", "the production and distribution of the social surplus in society" or "the study of the social provisioning process". Economists talk about these things but their mark of distinction is saying, with some degree of certainty, what will happen next and what would happen if some fact were different.

The representations economists use animate the way they see the world, how they understand events, and recommend action. The real task of the economist is to represent the world as it is, as it might be, and critically as one might like it to be. Once an economic schema is selected some aspects of experience stand out, while others are cast aside. A world comes into focus. Approached from this angle, and despite what people might say, Artists are well suited to do the work of economists.

Description

Democracy in the Americas
Special Topics course for BFA-1 students only by permission of instructor.
The Americas-both North and South America-are a socially, politically, and culturally diverse region of the planet. But the region nonetheless shares a significant number of historical and contemporary political and social problems and perspectives. This course focuses on these shared problems and perspectives as they relate to the current state of democracy in the region. During the semester we will structure the conversations around the reading of four emblematic books of contemporary political science and theory. The

first section will be devoted to one of the most insightful books ever written on the foundational experience of the American republic and its legacy in the present: Hannah Arendt's *On Revolution*. In the second section, we will focus on the equally foundational, but more recent experiences of contemporary Latin American modern democracies, paying particular attention to the emblematic cases of Argentina, Brazil, and Chile-the most important cases of late twentieth century democratization processes and early twenty-first century left-wing governments. During the second half of the semester, we will move to our own time and to the question of democracy in the United States and Latin America in the present. In this context, we will conceptually narrow down our perspective and focus on two specific dimensions of contemporary democracy: 1) the question of "dualist democracy" as a form of society in both North and South America, and 2) the question of left and right-wing populisms in the region, in particular focusing in the cases of the United States, Ecuador, Venezuela, and Bolivia. During the entire semester we will read from the aforementioned Arendt, and from Argentine political scientist Marcelo Cavarozzi, Chilean political sociologist Manuel Antonio Garretín, American constitutional theorist Bruce Ackerman, Mexican political theorist Paulina Ochoa Espejo, Paraguayan political and social theorist Benjamín Arditi, and Ecuadorian sociologist and political scientist Carlos de la Torre, among others. Students will be also asked to regularly read the Los Angeles, Buenos Aires and Rio Times' online editions as a way of permanently relating the class discussions to current events.

Description

Revolutions in America

Special Topics course for BFA-1 students only.

What is a revolution? Originally related to the cyclical movement of celestial bodies, the notion has now become central to our thinking of bodies down here on earth: that of body-politics. The idea of revolution plays thus ambivalently between the idea of the return to something previous and the breaking away from the past and the creation of the entirely new. From the French and American revolutions in late eighteenth century to today's both left-and right-wing

insurrections and uprisings against established political orders, the revolutionary imagination has been central to our modern and contemporary understanding of politics. This is the central theme we will interrogate with the help of Jewish-German American political thinker Hannah Arendt. We will then narrow down our focus specifically to the United States. In that context, we will criticize the "bicentennial myth" that claims that, in America, there has been only one revolution - the founding one. With the help of constitutional theorist Bruce Ackerman and his notion of "revolutionary reforms," we will see how the United States has experienced a larger number of revolutionary experiences - although not all of them successfully carried out - than the myth allows us to recognize: among them, the Civil War/Reconstructions, the New Deal, the Civil Rights Movement, the so-called Reagan Revolution, and the War on Terror presidency. During the second part of the semester, we will fast-forward into our contemporary times and analyze, with the help of philosopher Judith Butler, the way in which the Occupy Wall Street, Tea Party, and Black Lives Matter movements have reactivated the revolutionary imagination in America and how those movements relate to the politics of cohabitation and that of bodies in the streets. Finally, in dialogue with political theorist William Connolly, we will try to interpret the current aspirational fascism expressed in Trumpism and the current Republican Party. are they today's "revolutionaries"? During the entire semester, we will use the ongoing primaries and the presidential electoral process as an experimental stage to discuss the concepts introduced during the semester. For this reason, we will ask the students to read, together with the assigned bibliography, the Sunday New York Times on a weekly basis.

Mother Tongue: Applied Linguistics Intro

Subject Code	Course Number
CSOC	156S

School(s)
School of Critical Studies

Academic Level
UG - Undergraduate

Credit Hours

Min Credit Hours:
3

Description

An introduction to applied linguistics and language study, MOTHER TONGUE focuses on the theory, practice, methods of enquiry, understanding, and empathy necessary for language acquisition, effective inter/cross cultural communication, and artistic collaboration. Taking advantage of the rich cultural and linguistic diversity at CalArts, this course creates a shared space for those for whom English is a "mother tongue" and those for whom English is not a "mother tongue." Together monolingual speakers and multilingual speakers will explore the possibilities, complexity, and promise of intercultural engagement and develop increased understanding of new languages and cultures of communication.

In the course, students will expand their understanding language acquisition through active study of a new language of their choice, examine culturally based verbal and nonverbal communication styles that are barriers to

effective intercultural collaboration, and challenge cultural biases, hierarchies, and Westernized and Standardized English-language-centric worldviews. The course will draw purposefully on the expertise of multilingual students in the language acquisition process and ask all students to share existing cultural knowledge to support each other in growth along a proficiency continuum of intercultural competencies. The course also interrogates the legacy of colonialism that has positioned English in its current role in international communication, examining such phenomena as the use of Global English in commerce, the rise of a multiplicity of forms of English ("Englishes") around the world including hybrid languages like Singlish and Spanglish, and the impact of translingualism in contemporary arts and culture.

Description
Indigenous Aesthetics: The Art of Resistance. This course will explore multiple forms of Indigenous expression from throughout Turtle Island (present day United States and Canada) with a particular focus on works that have fueled and/or embody resistance to the colonial legacy, including film, literature, music, visual art, and dance. After an examination of historical aesthetic traditions among various Indigenous communities and nations prior to contact (basketry, quillwork, beadwork, songs, traditional painting, etc.) the course will turn to the post-contact era, when Indigenous artists began utilizing Western mediums in works of Indigenous expression. Beginning with the Kiowa 5, we will trace the unique trajectory of "American Indian art" within the Western art establishment, where Indigenous artists have resisted convention and the narrow parameters of the art market to carve an aesthetically distinct path in various mediums from the early twentieth century to the present. For the culminating project, students will select a contemporary Indigenous artist within their mtier and conduct a substantive study of their work. This may take the form of a research paper or a work of art in dialogue with the works of a student's chosen artist. This course will be a blend of in-person and online instruction.

Description
Observing Ourselves: An Introduction to the Study of Human Cultures
This course is an introduction to cultural anthropology which brings a global comparative perspective to the study of human beings. We will compare and contrast cultural practices related to language, food, family structures, gender and sexuality, politics, economics, supernaturalism, illness and healing, and more. Through a combination of lectures, films, assigned readings and in-class activities, we will explore and challenge the assumptions that we all hold about what is "natural," "normal" and "true." Students will also participate in a field study of the CalArts community, applying anthropological concepts and methodologies learned in the course.

Min Credit Hours:

0.5

Description

(Part one of this course will look at one set of materials and part two will look at another set of materials.) Fake cities can be defined by many aspects such as movie sets, caricature towns like Little Tokyo, theme parks, ghost towns, temporary cities, and sets left in and around Los Angeles that have later been incorporated. When do these cities become fake or real, and how can we use historical inquiry to find out? This course will be a case study on fake cities located in California, and it will also examine the essentials of a Californian city within that framework. It will also explore how to use the fake city to create a narrative or an understanding of history. This course will wonder where we can find the fake city seeping into literature, movies, and mixed media. We will study works such as Ansel Adams' "Born Free and Equal", Mark Twain's California writings, Carey McWilliams' "Southern California", Jordan Peele's "Nope", and primary texts about historical events. This idea of the fake city will also be used to understand the socioeconomic and parasocial relationships (meaning between audience and creator) we have with the fake/temporary city and its inhabitants. Each student will participate through class discussions and by bringing in an item (such as a photograph, map, vase, etc.) to discuss. They will also use this item as complementary evidence to the text(s). Lastly, the student will create a presentation generated from these discussions.

When do these cities become fake or real, and how can we use historical inquiry to find out? This course will be a case study on fake cities located in California, and it will also examine the essentials of a Californian city within that framework. It will also explore how to use the fake city to create a narrative or an understanding of history. This course will wonder where we can find the fake city seeping into literature, movies, and mixed media. We will study works such as Ansel Adams' "Born Free and Equal", Mark Twain's California writings, Carey McWilliams' "Southern California", Jordan Peele's "Nope", and primary texts about historical events. This idea of the fake city will also be used to understand the socioeconomic and parasocial relationships (meaning between audience and creator) we have with the fake/temporary city and its inhabitants. Each student will participate through class discussions and by bringing in an item (such as a photograph, map, vase, etc.) to discuss. They will also use this item as complementary evidence to the text(s). Lastly, the student will create a presentation generated from these discussions.

Description

Spring 2023 Topic: In response to the 2022 Supreme Court reversal on Roe v. Wade and its immediate and widespread impact on access to abortion and reproductive care in much of the US, our class will focus on the history, politics, activism and art surrounding the reproductive justice movement in the US and internationally. Moving beyond the narrow rhetoric of "choice" and "women's bodies," our class will focus on bodily autonomy more

broadly, exploring the connections between the recent abortion bans and similar bans limiting access to healthcare, representation, and social inclusion for transgender people, especially children. We will also find connections with global feminist struggles for bodily autonomy, and gender expression, including the "green wave" of abortion rights victories in Latin America and the revolution in Iran ignited and led by young women. Students will complete short weekly written assignments using a combination of personal and critical writing and will produce a class presentation about a group, organization, or artist's work related to reproductive justice and bodily autonomy.

Topics for the course change each semester, always with an intersectional and international analytical framework that centers intersectional and antiracist feminism, transgender rights and inclusion, and the progressive history of feminist thought and organizing throughout the world. The course is intended to be introductory and welcoming to all; though the topics are challenging and charged, we will practice a mode of inquiry and discussion that is inclusive, courageous, and respectful. Through this class students will be introduced to the social transformational model of feminist studies in the context of examining, and participating in, some of the most active and urgent social issues of our current moment, both in the US and internationally.

Description

Imaging Culture: Representation and Visual Anthropology.
As the discipline originally chartered to classify 'races of man,' images and their interpretation have long been important components of anthropology. From early anthropometrics and photographic recordings of rituals and daily practices, to ethnographic film and multimedia works, anthropologists have integrated visuals in a range of forms and uses that closely parallel technological developments in imaging. This extensive integration, however, has been accompanied by a sometimes conflicting set of

positions regarding visuals and their relationship to methodology, representation, and interpretation. This course explores issues of debate that visuals stimulate in ethnographic projects as well as the methods used to produce them. It takes a survey approach to anthropological visuals, with an emphasis on works that have shifted the perspective of how images and their production impact relationships among subjects, between subjects and ethnographers, between ethnographers and their work, and between these works and their audiences. In addition to films and readings, students will conduct fieldwork with a group of their choosing. Students will complete a series of visual exercises that will enable them to engage with the issues of representation considered in the course.

Description
Food for Thought: The Anthropology of Eating. Using an anthropological approach, this course is an eclectic inquiry into the study of food and eating practices among multiple cultural groups. Everyone eats, but what we eat, who we eat with, where, when and why is all influenced by greater cultural and political forces. Through research, discussion, and oral and written presentations, students will gain a broader understanding of food as a form of self expression, a means of group solidarity and social reciprocity, a symbolic element of ritual and religion, and as a mechanism of politics and public relations.

Description
The Americas--both North and South--are a socially, politically, and culturally diverse region of the planet. The region nevertheless shares a significant number of historical and contemporary political and social problems and perspectives: from Alaska to Tierra del Fuego it was populated by a diverse multiplicity of cultures and civilizations before the European conquest displaced, exterminated, and/or hybridized with them; it was the region of the planet most involved in the enslavement of millions of people of African descent; it later went through violent wars of independence and the revolutionary creation of new political entities; it was, again, the region that received the largest waves of immigration from Europe

as the latter went through the crises generated by the industrial revolution and world wars; it was also the region where massive transitions to democracy took place during the second half of the twentieth century, from the American Civil Rights movement in the sixties to the birth of stable democracies in the Latin American Southern Cone in the eighties; it is thus also the region of the planet with one of the largest democratic and egalitarian traditions and imaginations; and, finally and sadly, it is also one of the regions in which such traditions and imaginations are today openly threatened or in considerable decline. This course will focus on these phenomena as they relate to the current state of political life in Americas. During the semester, we will read from three classic works on the genesis of democratic societies in the continent: Jos Carlos Maritegui's Seven Interpretive Essays on Peruvian Reality, W.E.B. Du Bois' Black Reconstruction in America, and Transitions from Authoritarian Rule, edited by Guillermo O'Donnell. During the second half of the semester, we will focus on contemporary politics and will read from Marilena Chau's Between Conformity and Resistance, Bruce Ackerman's We the People, and Judith Butler's Notes Toward a Performative Theory of Assembly. Students will also regularly read the New York Times to relate the readings to current events.

Description
Abnormal Psychology is a branch of psychology that deals with psychopathology and abnormal thoughts and behaviors, often in a clinical context. The term covers a broad range of disorders, from mood and anxiety disorders to personality disorders to psychosis.

This course offers a comprehensive and integrated approach to the understanding abnormal psychology and treatment. It is important to note that to understand abnormal psychology it is essential to first understand what it means when we say "abnormal". The course includes a survey of the different categories of mental disorders including biological, psychological, and social/cultural determinants as well as psychosocial and pharmacological interventions.

ENGAGEMENT BY DESIGN:
The social turn in architecture and design

This class will investigate recent and contemporary design that puts social and political questions at the center of its practice. Moving beyond the Modernist maxim "form = function" to take up questions of decolonization, engagement and materiality, we will trace strains of contemporary design and architecture that re-evaluate and re-shape our notions of use and necessity, particularly in relation to the struggles for gender, disability and racial justice. Looking to the edges of architectural, graphic, industrial and product design discourse, Engagement by Design explores the social dimensions of the world of objects, with special

attention to furniture, mobile architecture, temporary structures, consumer products, and interface and information design.

Description
We are living in a time of increased vulnerability. From safe spaces to trigger warnings and cancel culture, drone wars to global warming and mass migrations, Black Lives Matter to #MeToo and the "great replacement" conspiracy theory of the alt-right--and let's not forget the pandemic: in each of these phenomena, homo vulnerabilis is coming to terms--and is often forced to come to terms--with the fact that they can be wounded, or even die. Starting from Byung-Chul Han's claim in Saving Beauty that "without injury, neither poetry nor art is possible", this course proposes to pursue something like an overview of today's vulnerability crises with special attention to how literature, and the arts more broadly, have engaged with them. Playing out the difference between universal, ontological vulnerability and specific historical experiences of vulnerabilization, the course draws from literature and the other arts to develop a critical perspective on our (and not only our) strange "ability" to be "wounded" ("vulner-ability," from the Latin word "vulnus", "wound"). Authors to be considered may include J.M. Coetzee, W.G. Sebald, Teju Cole, Jenny Erpenbeck, Claudia Rankine, Mary Gaitskill, and Michel Houellebecq. Critical approaches will range from work by Susan Sontag and Judith Butler to Saidiya Hartman and Maggie Nelson. We will also discuss artworks by Jeff Wall, Kehinde Wiley, Ai Weiwei, Cassie Thornton, and others.

Description
Artist as Educator: Pedagogy, Planning, and Practice.
Participants will learn how to effectively and ethically engage with the diverse communities of K-12 students-including English Learners and students with special needs-as artists and educators. This course aims to provide you with tools to better engage with youth participants in and out of formal educational settings to foster an environment of creativity, criticality, and equity. Student-centered learning, project-based teaching, inquiry-based pedagogy, theories of child development, social emotional learning, as well as trauma-informed pedagogy will be explored. We hope to provide you with the tools, practice, and exposure to the field of arts education to guide you in a career as an artist-educator. All sessions will include lecture, discussion, and participatory activities.

Description
How do you best learn? Who were the teachers that inspired you? Who were the teachers that made you give up? In this class, we will discuss how educational environments can be oppressive and what we can do as artists and aspiring educators to create spaces for collective liberation. The class will be centered around Paulo Freire's "Pedagogy of the Oppressed" and we will consider how we have seen (or not seen) his theories and philosophies applied in educational environments that we have encountered. We will also be considering other radical teaching philosophies from the minds of bell hooks, Augusto Boal, Jackie Wang and more. The class will consist of class discussions, analyzing lessons, watching documentaries, writing essays reflecting on our readings & discussions, and conjuring proposals for alternative educational environments that

center inquiry, love, and compassion. This class is best paired with CSOC-300 Artist As Educator as it will provide students with the opportunity to have in depth discussions and writing opportunities on shared reading assignments from a more theoretical approach.

Description
The Political & Latin America.
The Political is not just politics. Politics, on the one hand, is the set of practices and institutions that organize conflicts and disagreements in those societies that have developed a specific milieu for the staging of its internal divisions. Not all historical societies have had a realm explicitly designed as politics, but most modern and contemporary ones do have one. The political, on the other hand, refers to a dimension all societies have, not to a specific set of practices and institutions. The political is the dimension of societies' reversibility, the way they shape, stage, and make sense of themselves. The political is the forming of the social: the activity of its passivity. As such, the political is not circumscribed to politics only, it manifests itself in all meaningful social practice--in regular politics, of course, but also in its arts and its culture, as much as in its interpersonal, intergender, or interethnic relationships. For this reason, political theory is the interrogative practice of studying the way societies shape, stage, and make sense of themselves in the broadest possible sense. The political theory coming out of Latin America is its own thinking of the political and springs from the region's diverse shared historical experiences. During the semester, we will center on the two major political events theorized by Latin American thinkers in contemporary times. In the first half of the course, we will deal with the antifascist fight and the process of democratization, historical developments that dominated the entire twentieth century and that intertwined both local and global events and influences. During the second half of the course, our focus will move to the phenomenon of populism, its clash with neoliberal ideology, and the emergence on new Latin American left -and right-wing movements in the twenty first century. We will explore these major intellectual debates through the close reading of four of the most emblematic and globally influential Latin American thinkers: Argentine fiction writer and essayist Jorge Luis Borges, Mexican political theorist Mara Pa Lara, Brazilian political philosopher Marilena Chau, and Argentine political and social theorist Ernesto Laclau.

Description

How can we activate art-making for the current moment? How can we engage activism in new creative ways? In this critical/ creative laboratory, we will read, write, discuss, create, and harness experimental art strategies for social change. We will reckon with activism in creative non-fiction, fiction, poetry, performance, music, film, visual art, social media, and more. We will connect with activists and artists; do deep work related to a social movement or social justice issue; experiment with our own activist art-making in the classroom, on campus, and in the world; and, culminate the process in a convening, with activist/ art readings, original actions, research reports, teach-ins and/or campus / community conversation. Get ready. It's on.

Students should expect to spend \$100-\$150 on books and coursepack for this course.

322

School(s)

School of Critical Studies

Academic Level

UG - Undergraduate

Credit Hours

Min Credit Hours:

3

Description

This course explores how maps and mapping have evolved in the age of digital technologies. The key concepts of "critical cartography" and "cognitive mapping" will be our guides, two practices that allow us to see the relations of power and the subjective interests that are present within the act of mapmaking. Geographer Mark Monmonier, from whom this class takes its title, explains that a map is "the perfect symbol of the state." Maps legitimize abstract concepts of power through physical divisions of territory. Ideologies are made "real" when you can point to lines and see the borders of countries. Housing and city policies are validated when seen up on a map. To map something is to name it and claim it, thus the history of mapmaking is also the history of conquest and colonialism. In order to better understand this, our investigation will cut across time and historical moments to better understand our present. Today, technological achievements have allowed cartographers to map the world, astronomers and physicists to map the universe, and biologists to map DNA; in this respect mapping suggests more than just an understanding of our spatial relations to the earth, but also how we view the knowledge in our minds and the cells in our bodies. The internet will be crucial to the story that we intend to trace out, both the history of networked technologies as well as the utopic imaginings of cyberspace. For this reason the immense amount of informational mapping conducted by Silicon Valley tech corporations will never be far from our sights. As we make our way through the histories of mapping and cartography we will simultaneously look to critics, artists and filmmakers who have turned to these same tools to challenge or subvert the power of those who first wielded them. A fundamental tension this class seeks to understand will focus on what many argue to be the dangerous effects that might exist

when these technologies are concentrated in a small number of hands with the argument over the emancipatory possibilities that might exist when these technologies are in many hands.

Description

Ethnography of the Particular: Exploring Culture Through Life Story.

In order to understand life in another culture, anthropologists observe and interact with individual people, often recording individual life stories. However, as noted by David MacDougall, so often the individual in the finished ethnography is "left by the wayside on the road to the general principle" [the Balinese eat this; the Inuit believe that] leaving the study of other cultures largely the study of "Others" who lead somewhat homogenous timeless lives free of contradiction, personal relationships or responses to historical events. As Lila Abu-Lughod stated when she coined the phrase 'ethnographies of the particular', there is much to be learned by studying the specific experience of particular individuals because "particulars suggest that people in other cultures live as we perceive ourselves living, not as robots programmed with 'cultural rules' but as people going through life, agonizing over decisions, making mistakes, trying to make themselves look good, enduring tragedies and finding moments of happiness" - in short, being human. This course is an exploration of

particular life stories as an investigation into larger cultural themes, beliefs and practices. We will look at three life story ethnographies and review relevant literature to explore the process of life story production. By reading about a !Kung hunter-gatherer, a Moroccan tilemaker, and an American born with neither arms nor legs, we will explore to what extent the lives of individuals can represent greater cultural values and experiences. In addition, each student will be responsible for conducting several life story interviews with one person of their choosing and, by using techniques learned in class, will begin to write an 'ethnography of the particular.'

Description

Political thought, or political theory, is a culturally situated practice. The word "theory," etymologically, takes us to the idea of "looking at" or of "having a vision of." To theorize is thus to reach for the other side of the visible-for "its" invisible, its meaning. The political theory coming out of Latin America springs from the region's multiple and diverse shared experiences with political and social life. Our own perspective will distance itself from two more conventional approaches to this dynamic: the political theory of Latin America and the political theory imported by Latin Americans. For us, "political theory in Latin America" means the thinking that, while having emerged from Latin America, it 1) nevertheless was and remains in dialogue with other global theoretical traditions, and 2) has impacted on those global traditions in novel and productive ways. During the semester, we will center on the two major political events theorized by Latin American thinkers during the past few decades. In the first half of the course, we will deal with the process of democratization, the human rights violations perpetrated by the previous military dictatorships, the question of retroactive justice, and the theorizing of evil. During the second half of the course, our focus will move to question of political theology, the phenomenon of populism, its clash with neoliberal

ideology, and the emergence on a new Latin American Left. We will explore these major intellectual debates through the close reading of a few of the most emblematic and globally influential Latin American political and social theorists: Argentine philosopher and legal theorist Carlos Nino, Mexican social and political thinker María Pía Lara, Brazilian political philosopher and cultural theorist Marilena Chauí, and Argentine political and social theorist Ernesto Laclau.

Description

Decolonizing Justice: art and the mythic narratives of modern law

This course considers what if any relationship can be drawn between the discourses of art and law. All manner of artists and cultural producers have had run-ins with the law in one form or another, whether as a matter of intended choice or by accident. But the complexities and intricacies of legal code and procedure can often overwhelm and intimidate the layperson, leaving the impression that the subject of law is a specialized knowledge accessible to only those deemed expert. We will seek to understand how and why these assumptions might exist in the first place. We will look to artists who have directly set out to challenge the narratives behind legal structures towards an image of social justice (artists), but we will also look to how arts and cultural production have wittingly, or unwittingly served to legitimize the very narratives others seek to challenge. Art and law are linked in their constant need to adapt and respond to an ever changing society, thus lies a temptation for each discipline to see itself both within, but also outside the bounds of society. Art and law share a unique distinction in that they are in a perpetual state of dynamism and self-inquiry. What is just and how does law give shape to society? What is art and how does it influence or challenge societal shapes? These questions are crucial for both practitioners and observers of art and law equally, between them sits culture. Cultural narratives and legal

narratives are thus entangled, art shapes law and law shapes art. If we are to accept the story that the laws of liberal democracies represent a self-governing citizenry (the people's will) and thus cultural values; and if art is understood as the expressions of these cultural values, then what can we learn by putting art and law in dialogue with one another?

Our focus will be oriented towards the Occidental or Western origins of legal philosophy within the European project of colonization and it's racializing logic, what sociologists have called the process of racialization: how different peoples have historically been grouped under a set of racial hierarchies with varying economic, political and legal privileges or burdens. What scholars Barbra and Karen Fields have also called "racecraft." Our line of inquiry begins by examining the law as an aesthetic practice itself, tracing the history of its use of iconography, imagery and ceremony through such devices as robes, statues and temple-like architecture. Weekly readings from a variety of perspectives will be put in dialogue with artists, filmmakers, performers and other cultural producers as we attempt to better understand the old narratives of our modern legal regimes. This course begins with the assertion that despite legal discourses of procedure and neutrality (e.g. justice is blind) law is in fact something fundamentally political, therefore the endeavor to understand law is an endeavor to understand power. If art is to challenge and prompt a healthy critique of culture and societies, it is then incumbent upon artists to engage with and understand how legal institutions organize our shared societies.

Description
At the Intersections: Economy, Identity, Body

In her poetic-prose work Schizophrene, Bhanu Kapil writes, "An economy is a system of apparently willing but actually involuntary exchanges." What are these economic systems that permeate our bodies, lives and decisions, and how do they work?

How do they work on and through us as people living in a late-capitalist society? And importantly, how do economic structures inform your practices as artists and creators?

Our goals are to look more in depth at terms and concepts we hear on a daily basis and to explore how they affect us and the world we live in. We will gain a working knowledge of contemporary discussions and debates about labor, debt, austerity, privatization, and governmental and non-governmental organizations (NGOs). In addition to critical texts, we will look to film, literature, performance and music to see how artists are interrogating economic issues in their practices, including the tenets of economic theories of capitalism, neoliberalism, and Marxism.

Our study will take an intersectional, materialist feminist approach that takes gender, sexuality, race, ethnicity and ability as its starting point. We will locate our analysis in material life including class, jobs, paid and unpaid work, money and resources. Our analysis and practice will highlight the feminization of poverty, domestic work, emotional labor and economic inequity.

Description
From a self-help craze to government funded scientific research, the pursuit of happiness has become a 'hot topic' in both popular culture and multiple fields of social science inquiry and research. In particular, the field of positive psychology is the study of positive emotions, positive experiences, character strengths, and the practices that facilitate their development. In this course, we will research and analyze varied perspectives on happiness from some of the major theorists in the field highlighting concepts such as gratitude, optimism, mindfulness, resilience, and creativity. We will also engage in experiential learning and practical exercises to increase well-being as a means of understanding both the theories and ourselves.

Description

This year's Research Seminar on the Aesthetics of Politics will focus on six books, six authors, and three theoretical dialogues on the aesthetic-as opposed to the theological or epistemic-understanding of politics in general and of democracy in particular. These six aesthetico-political authors are: French philosophers Maurice Merleau-Ponty and Claude Lefort, American pragmatist and neo-pragmatist philosophers John Dewey and Richard Rorty, and

Jewish-German American political thinker Hannah Arendt and American philosopher Judith Butler. The course is thus about the aesthetics of politics, but doubly so. On the one hand, it is about the way in which both art and political action participate in the political institution of the social-that is, about the way in which our aesthetic and political practices shape, stage, and make sense of our societies. On the other hand, the course is also about a particular understanding of that very political institution of society. Societies institute themselves in a plurality of ways. This plurality could be simplified in three forms: theological, epistemic, and aesthetic. With the help of the mentioned thinkers, we will engage in the exploration of what we will call the aesthetic political horizon. We will devote the first and last classes to introduce the general topic and themes, and to conclude with a recapitulation and a discussion around the students' final presentations. During the seminar's main six classes we will deal with one book by each of our selected thinkers during each of the sessions. This strategy will allow us to focus, in the most effective manner possible, and during a very intensive, two-week long seminar, on the crucial contribution each of these authors and dialogues has made and continues to make to the field of an intertwined-both practically and theoretically-aesthetics and politics. At the same time, this Winter session course is designed to potentially become the triggering event of a much larger relationship with either or all these authors/theoretical debates. MA in Aesthetics and Politics and other students will be welcome to suggest Spring semester independent studies, or to take a specifically designed course around the unclassifiable work of Argentine writer Jorge Luis Borges, to further incursion on the introduced matters. The seminar is open to MA, MFA, and Upper Level BFA students.

Description

Political thought, or political theory, is a culturally situated practice. The word "theory," etymologically, takes us to the idea of "looking at," or of "having a vision of," something. To

see, to have a vision, is to reach for the other side of the visible-for "its" invisible. A theory, the invisible of a visible, thus springs from those events, processes, and experiences that, by being theoretically interrogated as they appear, become articulated experience. The political theory coming out of Latin America therefore and unavoidably springs from the region's multiple and diverse shared experiences with political and social life. During the semester, we will close-read some of the most emblematic and revered Latin American political theorists and their political "visions": Brazilian philosopher Marilena Chauí, Argentine political philosopher and legal theorist Carlos Nino, Mexican social and political thinker María Pía Lara, Colombian philosopher Eduardo Mendieta, Brazilian public intellectual and pragmatist Roberto Mangabeira Unger, Argentine political and social theorist Ernesto Laclau, and Ecuatorian sociologist and political scientist Carlos de la Torre, among others. The events and experiences from which these theorists' work sprang are of course multiple and complex. During the semester, we will attempt an organization of this complexity by focusing on four of the most globally influential theoretically interrogated experiences in Latin America-the figure of the politically engaged intellectual, the human rights' violations and their prosecution, the question of democracy and its clash with the advent of neoliberalism, and the Left turn and the emergence of the populist dilemma.

Description

In this year's edition of the Research Seminar on the Aesthetics of Politics we will engage in an in-depth reading of two different but deeply intertwined aesthetico-political authors: French philosopher Maurice Merleau-Ponty and Jewish-German American political thinker Hannah Arendt. We will devote one week to each author and each of the weeks could be taken separately as individual seminars as well as both together as a single course. The strategy we will follow will reverse the usual expectations regarding these thinkers. In the case of Merleau-Ponty, a passionately involved left-wing aesthetic

philosopher, we will analyze the way in which it was in fact his aesthetic and most philosophical writings rather than the strictly political ones those that give us the most profound understanding of political life. The Visible and the Invisible is the title of Merleau-Ponty's famous, unfinished, and posthumously published masterpiece. Although Merleau-Ponty's early phenomenology of perception and his essays on art, politics, and language already showed an affinity between the aesthetic phenomena of expression and style, and the political and cultural dynamics of society at large, it was his late notion of flesh that became crucial for grounding what this seminar assumes to be his aesthetico-political understanding of politics, revolution, and democracy. Inversely, Arendt is no doubt one of the most important and influential strictly political thinkers. Surprisingly though, it was also in the past years of her prolific life and production that she chose to interrogate Kant's notion of aesthetic judgment as a means to better understand our contemporary political world. The second week of this Wintersession course will thus move to perform an in-depth reading of Arendt's key aesthetico-political writings.

Description

This class will examine the transformation of the prison, policing and surveillance systems in the United States following the 1960's through an in-depth look at the experiences of prisoners, including modes of self-expression and resistance and through the lens of scholars dedicated to understanding the political dynamics of the Prison Industrial Complex. The emphasis on prison life, the broader dynamics of policing, the "war on drugs" and the political struggles around immigration is designed to expose students to the network of social and political forces that shape the "criminal justice system." Particular focus will be given to the racial dynamics of policing, sentencing and prison life; the historical roots of contemporary criminal and legal issues; and the broad reach of the Prison Industrial Complex. The first section of the class is devoted to writing by imprisoned intellectuals and activists. Students will examine various narrative and

literary strategies employed to communicate about life in the carceral state. In the second part of the course, historical and scholarly writing contextualizes the social and political implications of a nation that has the highest incarceration rates in the world. The final section looks at the ways that the PIC is visually represented in the work of contemporary artists and the ways that prisoners engage in various forms of cultural and expressive activities. Students will be expected to participate actively in course discussions and complete a final research project. Attendance and participation are a crucial aspect of this course.

Description

What do we mean by "aesthetics and politics," that vaguely defined field of research, knowledge, and understanding? As we know thanks to the Gestalt theory, the whole is always more than the sum of the parts; it is not to be found in the elements, the key is their relationship. So, let us start with a deceptively simple question: what does "and" mean? Is "and" standing for "of"? Are we thus thinking about the aesthetics of politics? Or does it stand for "in", as in the aesthetics in politics? Are we considering the possibility of an aesthetics thus politics, as in a politics that is always already aesthetic? Or are we asserting instead an aesthetics yet or unlike politics, as if the relation were somehow an exception to some rule of exclusion? These different, overlapping, disjointed, reversible articulations between aesthetics and politics, in their chaos of multiplicity, do somehow contribute to the formulation of some kind of cosmos: art is political first and foremost because it is one of the fundamental ways in which society folds itself, sees, transforms, stages, and makes sense of itself. And that is why both art and politics rightfully deserve to be called both "political" and "aesthetic": because in dealing with aisthesis, with the sensible and the perceptible, and with the in-between of multiple and multi-perspectival sensing bodies, they jointly deal with the shared world of intercorporeal meanings, practices, institutions, and power that we call "the political." The course will focus on four twentieth century authors and their aesthetico-political understanding of the notions of cosmos, power, truth, and freedom: Argentine fiction writer and essayist Jorge Luis Borges, French philosopher Maurice Merleau-Ponty, Jewish-German American political thinker Hannah Arendt, and American neo-pragmatist philosopher Richard Rorty. During the semester, we will also watch and analyze four films in some way associated with the work of the discussed authors: Donald Cammell and Nicolas Roeg's Performance, Matsumoto Toshio's Funeral Parade of Roses, Eyal Sivan and Rony Brauman's The Specialist, and Errol Morris' The Unknown Known.

Description

Aesthetics and Politics in China.

Open to BFA-4 students only.

'I thought it would be terrible to live in this world and not know what another part of the world was like.' Robert Rauschenberg.

In modern China, politics have been conducted not simply by means of party and mass movement, but also by way of aesthetic experience. In this course we will focus on the appreciation and creation of art, and how it has intermeshed with politics. How the need to forge a modern subjectivity, to foster national and class consciousness has been addressed aesthetically---in ways that intimately involve the bodily, sensuous, and emotional dimensions of the individual's lived experience and the way that politics themselves have been turned into aesthetic experience. We will begin with an analysis of "literati Art" which established the importance of harmony between nature and culture, feeling and reason, society and individuals, making the tone of Confucian aesthetics deeply emotional. Its overturn by Mao Zedong, the adoption of Lu Xun's thinking as the foundation of communist Chinese aesthetics till 1979. The rise of Scar painting and Star group as important art movements and Rustic Realism depicting the revolution's impact on ordinary rural people. We will then move to the Pro-democracy student movement, the rise of the China/avant-garde and the Political Pop of the 1990s. Finally we will contemplate the resurgence of contemporary art movement in China with Beijing once again becoming the artistic center especially with the creation of 798 art zone and the art of the Olympics in 2008. Students will research and present a contemporary political issue and write a report on role of the artist in a heavily censored society. The class will also visit China Town and The Chinese Art collection at LACMA.

Description

Race, Erasure, Inequality: Studies in Theory and Resistance

This course examines the roots and history of white supremacist racism in the United States, from the era of slavery during the country's early days as a revolutionary liberal democratic republic to today. The course aims to provide a context for understanding 20th and 21st Century anti-racist resistance. Along the way, we will look at the forms and norms of racialization and racist discourse and practice and the relationship of those forms and norms to the law. Although the course takes anti-Black racism as the cornerstone of racist and white supremacist theory and practice in the United States, we will also address more generally the problem of "racialization," or the manner and means by which legal, sociopolitical, gendered, and cultural concepts of "race" are used by adherents of white supremacy to dominate, stigmatize, stereotype, degrade, and demean groups and individuals targeted by this process.

The anti-racist response has included joint efforts of African and European-descendent peoples in creating political, social, and cultural movements that have challenged white supremacy and the constraints it has imposed on society. One result of these efforts was the emancipation of the enslaved. However, the post-slavery persistence of racist thought, discourse, and practice in this country has been enduring and consequential. So has the anti-racist challenge and resistance. Racist laws were repealed over half a century ago, and racism no longer plays the role in society that did historically. Yet, the legacy of racist ideas and norms still hover over social relations, and serve today to catalyze political and social division, privileging some while continuing to keep systems in place that subject the racialized to categorical disrespect, degradation, injustice, social inequality, and disparate life outcomes. Meanwhile, anti-racist resistance and challenge has continued to question and undermine the survivals and the core norms, assumptions, and consequences of racialization. Readings in this course will examine racism's dynamic of presence and erasure, as well as aspects of anti-racist resistance and challenge, through a survey of racism and anti-racism in U.S. law, politics, economics, public and private discourse, art, culture, and consciousness.

Description

Queer Representability: The Politics of LGBT Visual Culture. Open to BFA-3 and BFA-4 students only.

What makes an image a queer image-the content, producer, mode of production, a certain sensibility, a set of politics, or simply the eye of the beholder? What are the social, linguistic, and semiotic conditions of intelligibility that inform our available modes for representing queer experience? Does the recent explosion of gay and lesbian characters on television mean we have emerged from the celluloid closet? Or are we witnessing new homonormative forms of censorship? Are social recognition and visibility the necessary goals of all queer representation? What potential may linger in the obscene, the abject, or the unintelligible? Is queerness, in its most radical possibilities, ever fully representable?

The term representability is drawn from psychoanalytic theory where it is used to address the process by which latent unconscious content takes the form of dream images and, thus, becomes available to consciousness. The course will expand from this starting point to understand morebroadly the process by which an endless possibility of arrangements of bodies and pleasures are channeled and disciplined into a narrow set of recognizable sexual identities and kinship practices. Course readings include works by Butler, Bersani, Berlant, Edelman, de Lauretis, Gopinath, Halberstam, Munoz, Warner and many more-offering a comprehensive introduction to a range of approaches to queer cultural politics. Our critical inquiries will unfold alongside the investigation of a number of flashpoints in queer cultural studies-including pre- and post- Hayes code Hollywood cinema, the early representation of HIV/AIDS, diva worship and slash culture, 'New Queer Cinema,' TV after-Ellen, and contemporary trans portraiture.

Description

Muñoz: The Theory and Practice of Queer Worldmaking

This class will be devoted to an in-depth exploration of the work and lasting impact of a single author: writer, scholar, and critical theorist José Esteban Muñoz. Through this central focus on Muñoz, students will undertake an advanced study of queer of color critique, queer performance studies, and queer Latinx studies, while moving through Muñoz' three major works together in full—each of them groundbreaking in their time: *Disidentification: Queers of Color and the Performance of Politics* (1998), *Cruising Utopia: The Then and There of Queer Futurity* (2009), and the posthumously published *The Sense of Brown* (2020). A wildly interdisciplinary thinker, well versed in philosophy and critical theory, known for his lively writing and the blending of his scholarly and personal life through the cultivation of a close knit queer academic artist/academic family, a study of Muñoz is a study of some of the best and most generative thinking in queer theory and politics of the last thirty years, with special focus on the fields of affect theory, performance studies, public sphere theory, cultural studies, critical race and Latinx studies. We will supplement our primary reading with readings, screenings, and visits with Muñoz' familia of artist and academics, such as Eve Kosofsky Sedgwick, Jennifer Doyle, Karen Tongson, Nao Bustamante, Lauren Berlant, Malik Gaines, Jibz Cameron (aka Dynasty Handbag) and many others. Across all of his works, Muñoz spoke of the "worldmaking" potential of queer of color art and collective space, and this concept will provide a central topic not just for our reading but for the broader investigations, practices and collective work of the class.

While you need not be familiar with Muñoz's work to take this class, it is highly recommended that you have completed at least one course in queer studies, performance studies, or critical theory and feel prepared to participate in a graduate level academic seminar with 50+ pages of reading per week and the expectation of independent research and analysis.

Description

The World in the Model : The Model in the World

For at least the last two hundred years modeling has been the principle activity of the economist. A casual observer might think that the economist's mania is focused on quantifying experience but the game goes deeper than that. Quantification on its own merely describes what already exists, the aim of the economist is to visualize the future and there by give it shape.

In this class, we will be looking at economic models from the last 200 years from across the ideological spectrum. We will be paying close attention to how they employ a basic unit of analysis. Are there people in the models (or nations, cultures or societies)? Are these "agents" realistic? How is human agency dealt with in these models? Do they imply ethical obligations? How is value conceived and how is it measured in each model? How is time dealt with in the model? do things happen instantaneously or is a time period implied at all? What (and who) is left out of the schema. What is cooked in?

The representations that economists use animate the way they see the world, how they understand events, and recommend action. The real task of the economist is to represent the world as it is, as it might be, and critically as one might like it to be. Once an economic schema is selected some aspects of experience stand out, while others are cast aside. A world comes into focus. Approached from this angle artists are well suited to do the work of economists. Artists are skilled at observing the world and representing it in insightful ways. Modeling is a creative action and too important to be left to the economist. This course will elide the roadblocks of economic jargon towards the generation of new, personal, creative economic models.

As we study these models and discuss what they are designed for we may be surprised to find ourselves taking their insights to heart. But, we can not forget that economics is sometimes a form of brainwashing. There is a robust literature that demonstrates that taking economics classes makes students more likely to behave in the ways that the models they study say they should. Study a model, behave as such. Study a different model, a different way of being emerges.

In this class, we will begin to liberate economics from the economists.

Description

In this year's Winter Session, we will engage in an in -depth reading of Argentine fiction writer and essayist Jorge Luis Borges, an author widely but wrongly regarded as "a-political."

In the course, we will reveal the way in which his "fictions" were in fact a massive attempt to respond to the politics of his time—the advent of fascism and totalitarianism—and thus will help us interrogate "the political" in its most complex manifestations: the question of political forms, the question of the institution of the new in historical time, and the question of alterity. As we are witnessing during these turbulent times, anti-Fascists come in different forms and shapes: small "d" democrats, anarchists, Marxists, and libertarians from all parts of the world have experienced their confrontation with fascism as the defining moment of their lives. Not everyone, however, managed to become one of the most original and influential twentieth century authors because of such confrontation. In this seminar, we will offer a multilayered political reading of Borges' fiction and non-fiction writings. Our first approach to his texts will be concerned with his non-fiction critique of Nazism and Fascism in Europe and Latin America. During the following sessions, we will structure the course as an exploration of the theoretical implications of Borges' "detour of fiction," and we will do so by diving into three conceptual aesthetico-political dichotomies that his writings will help us interrogate: that of chaos and cosmos, the imaginary and the real, and the same and the Other. While doing this, the course will also engage his different stories and essays from the perspective of three modern and contemporary thinkers and contemporary philosophers: political and social theorist Claude Lefort, Jewish German American political thinker Hannah Arendt, and American philosopher Judith Butler.

Description

This course will not be just about Argentine writer Jorge Luis Borges; but it will all happen in the inconceivable Borgesian pluriverse. The course is about the aesthetics of politics, and doubly so. On the one hand, it is about the way in which art in general, and Borges in particular, engage in the interrogation of the political institution of the social-that is, about the way in which our aesthetic practices try, and sometimes manage, to interrogate the way in which societies shape, stage, and make sense of themselves. On the other hand, the course is also about a particular understanding of that political institution of society. Societies institute themselves in a plurality of ways. This plurality could be simplified in three forms: theological, epistemic, and aesthetic. With and within Borges short stories, essays, and other hybrid forms of his writing-plus the help of a few political philosophers we will read together with Borges-we will engage in the exploration of what we will call the aesthetic, as opposed to theological or epistemic, political horizon.

Argentine writer Jorge Luis Borges enjoys an almost mythical global stature. He has been influential in the world of literature, of course, but his work has appeared as an inspiring and sometimes unexpected presence in the fields of film, fine arts, theatre, and even television and other contemporary cultural and visual forms. Borges' work has also been engaged by many philosophers and social theorists such as Foucault, Derrida, Deleuze among many others. What is somehow surprising, however, is that given the fact that many of his short stories, poems, and essays have often dealt with political matters, these terribly insightful and conceptually rich incursions into the field of the political has not been sufficiently explored yet. In this course, Borges will be taken seriously as a thinker of political forms, political imagination, and political alterity and his work will be interrogated in dialogue with four highly influential twentieth and twenty first century philosophers: William James, Claude Lefort, Hannah Arendt, and Judith Butler.

Description

Human Rights and Wrongs: Social Justice and Media in Global Perspective

This course explores one of the most important issues of our time - human rights. We will study the theory and practice of human rights and wrongs by examining key debates that have animated the field. In today's digital and networked world it is hard to escape the political power of the moving images which often bring many of these human rights issues to life on our screens, in our homes. The course reflects the globalized context in which any debate regarding human rights must take place, and thus is organized thematically. In Section One, we will begin with some historical accounts and an examination of the post- world war II, context in which the contemporary human rights framework was established. What are human rights and who decides? Are they enforceable? Rights for whom? Can and do states protect citizens' human rights? In the Section Two, we'll cover the debates about the universality of rights. How is the notion of human rights embedded in Social, and Economic structures of inequality? How does the discourse of human rights create victims and saviors? In the Section three, we will deal with post 9/11, war on terror and torture and its world wide impact on human rights and wrongs. In Section Four we consider the lived experiences of people facing genocide, ethnic cleansing and human rights violations. How do people heal the personal and political wounds of wars and how do they make their stories known? In this section, we also take up the search for justice. What is the relation between justice, human rights and truth? We examine the work of criminal tribunals, the International Criminal Court and truth and reconciliation commissions. When should the international community intervene in sovereign nations' treatment of their own citizens? In the concluding section, we examine the take home questions: What are the potentials and the limitations of human rights as an international regime? Besides using academic writings, the course will also explore human rights through the works of various groups that try to intervene in the crisis: journalists, photographers, filmmakers, human rights activists, scholars, artists, and others who try to bring international attention to the situation and help mitigate the violence. The course will culminate in a collective project that brings together scholarship, art and activism.

We will devote one week to each author and each of the weeks could be taken separately as individual seminars as well as both together as a single course. The strategy we will follow will reverse the usual expectations regarding these thinkers. In the case of Merleau-Ponty, a passionately involved left-wing aesthetic philosopher, we will analyze the way in which it was in fact his aesthetic and most philosophical writings rather than the strictly political ones those that give us the most profound understanding of political life. The Visible and the Invisible is the title of Merleau-Ponty's famous, unfinished, and posthumously published masterpiece. Although Merleau-Ponty's early phenomenology of perception and his essays on art, politics, and language already showed an affinity between the aesthetic phenomena of expression and style, and the political and cultural dynamics of society at large, it was his late notion of flesh that became crucial for grounding what this seminar assumes to be his aesthetico-political understanding of politics, revolution, and democracy. Inversely, Arendt is no doubt one of the most important and influential strictly political thinkers. Surprisingly though, it was also in the past years of her prolific life and production that she chose to interrogate Kant's notion of aesthetic judgment as a means to better understand our contemporary political world. The second week of this Wintersession course will thus move to perform an in-depth reading of Arendt's key aesthetico-political writings.

Description

This class will examine the transformation of the prison, policing and surveillance systems in the United States following the 1960's through an in-depth look at the experiences of prisoners, including modes of self-expression and resistance and through the lens of scholars dedicated to understanding the political dynamics of the Prison Industrial Complex. The emphasis on prison life, the broader dynamics of policing, the "war on drugs" and the political struggles around immigration is designed to expose students to the network of social and political forces that shape the "criminal justice system." Particular focus will be given to the racial dynamics of policing, sentencing and prison life; the historical roots of contemporary criminal and legal issues; and the broad reach of the Prison Industrial Complex. The first section of the class is devoted to writing by imprisoned intellectuals and activists. Students will examine various narrative and literary strategies employed to communicate about life in the carceral state. In the second part of the course, historical and scholarly writing contextualizes the social and political implications of a nation that has the highest incarceration rates in the world. The final section looks at the ways that the PIC is visually represented in the work of contemporary artists and the ways that prisoners engage in various forms of cultural and expressive activities. Students will be expected to participate actively in course discussions and complete a final research project. Attendance and participation are a crucial aspect of this course.

Description

What do we mean by "aesthetics and politics," that vaguely defined field of research, knowledge, and understanding? As we know thanks to the Gestalt theory, the whole is always more than the sum of the parts; it is not to be found in the elements, the key is their relationship. So, let us start with a deceptively simple question: what does "and" mean? Is "and" standing for "of"? Are we thus thinking about the aesthetics of politics? Or does it stand for "in", as in the aesthetics in politics? Are we considering the possibility of an aesthetics thus politics, as in a politics that is always already aesthetic? Or are we asserting instead an aesthetics yet or unlike politics, as if the relation were somehow an exception to some rule of exclusion? These different, overlapping, disjointed, reversible articulations between aesthetics and politics, in their chaos of multiplicity, do somehow contribute to the formulation of some kind of cosmos: art is political first and foremost because it is one of the fundamental ways in which society folds itself, sees, transforms, stages, and makes sense of itself. And that is why both art and politics rightfully deserve to be called both "political" and "aesthetic": because in dealing with aisthesis, with the sensible and the perceptible, and with the in-between of multiple and multi-perspectival sensing bodies, they jointly deal with the shared world of intercorporeal meanings, practices, institutions, and power that we call "the political." The course will focus on four twentieth century authors and their aesthetico-political understanding of the notions of cosmos, power, truth, and freedom: Argentine fiction writer and essayist Jorge Luis Borges, French philosopher Maurice Merleau-Ponty, Jewish-German American political thinker Hannah Arendt, and American neo-pragmatist philosopher Richard Rorty. During the semester, we will also watch and analyze four films in some way associated with the work of the discussed authors: Donald Cammell and Nicolas Roeg's Performance, Matsumoto Toshio's Funeral Parade of Roses, Eyal Sivan and Rony Brauman's The Specialist, and Errol Morris' The Unknown Known.

Description

Race, Erasure, Inequality: Studies in Theory and Resistance
This course examines the roots and history of white supremacist racism in the United States, from the era of slavery during the country's early days as a revolutionary liberal democratic republic to today. The course aims to provide a context for understanding 20th and 21st Century anti-racist resistance. Along the way, we will look at the forms and norms of racialization and racist discourse and practice and the relationship of those forms and norms to the law. Although the course takes anti-Black racism as the cornerstone of racist and white supremacist theory and practice in the United States, we will also address more generally the problem of "racialization," or the manner and means by which legal, sociopolitical, gendered, and cultural concepts of "race" are used by adherents of white supremacy to dominate, stigmatize, stereotype, degrade, and demean groups and individuals targeted by this process.

The anti-racist response has included joint efforts of African and European-descendent peoples in creating political, social, and cultural movements that have challenged white supremacy and the constraints it has imposed on society. One result of these efforts was the emancipation of the enslaved. However, the post-

slavery persistence of racist thought, discourse, and practice in this country has been enduring and consequential. So has the anti-racist challenge and resistance. Racist laws were repealed over half a century ago, and racism no longer plays the role in society that did historically. Yet, the legacy of racist ideas and norms still hover over social relations, and serve today to catalyze political and social division, privileging some while continuing to keep systems in place that subject the racialized to categorical disrespect, degradation, injustice, social inequality, and disparate life outcomes. Meanwhile, anti-racist resistance and challenge has continued to question and undermine the survivals and the core norms, assumptions, and consequences of racialization. Readings in this course will examine racism's dynamic of presence and erasure, as well as aspects of anti-racist resistance and challenge, through a survey of racism and anti-racism in U.S. law, politics, economics, public and private discourse, art, culture, and consciousness.

Description

Queer Representability: The Politics of LGBT Visual Culture.
What makes an image a queer image-the content, producer, mode of production, a certain sensibility, a set of politics, or simply the eye of the beholder? What are the social, linguistic, and semiotic conditions of intelligibility that inform our available modes for representing queer experience? Does the recent explosion of gay and lesbian characters on television mean we have emerged from the celluloid closet? Or are we witnessing new homonormative forms of censorship? Are social recognition and visibility the necessary goals of all queer representation? What potential may linger in the obscene, the abject, or the unintelligible? Is queerness, in its most radical possibilities, ever fully representable?

The term representability is drawn from psychoanalytic theory where it is used to address the process by which latent unconscious content takes the form of dream images and, thus, becomes available to consciousness. The course will expand from this starting point to understand morebroadly the process by which an endless possibility of arrangements of bodies and pleasures are channeled and disciplined into a narrow set of recognizable sexual identities and kinship practices. Course readings include works by Butler, Bersani, Berlant, Edelman, de Lauretis, Gopinath, Halberstam, Munoz, Warner and many more-offering a comprehensive introduction to a range of approaches to queer cultural

politics. Our critical inquiries will unfold alongside the investigation of a number of flashpoints in queer cultural studies-including pre- and post- Hayes code Hollywood cinema, the early representation of HIV/AIDS, diva worship and slash culture, 'New Queer Cinema,' TV after-Ellen, and contemporary trans portraiture.

Description
Muñoz: The Theory and Practice of Queer Worldmaking

This class will be devoted to an in-depth exploration of the work and lasting impact of a single author: writer, scholar, and critical theorist José Esteban Muñoz. Through this central focus on Muñoz, students will undertake an advanced study of queer of color critique, queer performance studies, and queer Latinx studies, while moving through Muñoz' three major works together in full-each of them groundbreaking in their time: Disidentification: Queers of Color and the Performance of Politics (1998), Cruising Utopia: The Then and There of Queer Futurity (2009), and the posthumously published The Sense of Brown (2020). A wildly interdisciplinary thinker, well versed in philosophy and critical theory, known for his lively writing and the blending of his scholarly and personal life through the cultivation of a close knit queer academic artist/academic family, a study of Muñoz is a study of some of the best and most generative thinking in queer theory and politics of the last thirty years, with special focus on the fields of affect theory, performance studies, public sphere theory, cultural studies, critical race and Latinx studies. We will supplement our primary reading with readings, screenings, and visits with Muñoz' familia of artist and academics, such as Eve Kosofsky Sedgwick, Jennifer Doyle, Karen Tongson, Nao Bustamante, Lauren Berlant, Malik Gaines, Jibz Cameron (aka Dynasty Handbag) and many others. Across all of his works, Muñoz spoke of the "worldmaking" potential of queer of color art and collective space, and this concept will provide a central topic not just for our reading but for the

broader investigations, practices and collective work of the class.

While you need not be familiar with Muñoz's work to take this class, it is highly recommended that you have completed at least one course in queer studies, performance studies, or critical theory and feel prepared to participate in a graduate level academic seminar with 50+ pages of reading per week and the expectation of independent research and analysis.

Description
The World in the Model : The Model in the World

For at least the last two hundred years modeling has been the principle activity of the economist. A casual observer might think that the economist's mania is focused on quantifying experience but the game goes deeper than that. Quantification on its own merely describes what already exists, the aim of the economist is to visualize the future and there by give it shape.

In this class, we will be looking at economic models from the last 200 years from across the ideological spectrum. We will be paying close attention to how they employ a basic unit of analysis. Are there people in the models (or nations, cultures or societies)? Are these "agents" realistic? How is human agency dealt with in these models? Do they imply ethical obligations? How is value conceived and how is it measured in each model? How is time dealt with in the model? do things happen instantaneously or is a time period implied at all? What (and who) is left out of the schema. What is cooked in?

The representations that economists use animate the way they see the world, how they understand events, and recommend action. The real task of the economist is to represent the world as it is, as it might be, and critically as one might like it to be. Once an economic schema is selected some aspects of experience stand out, while others are cast aside. A world comes into focus. Approached from this angle artists are well suited to do the work of economists. Artists are skilled at

observing the world and representing it in insightful ways. Modeling is a creative action and too important to be left to the economist. This course will elide the roadblocks of economic jargon towards the generation of new, personal, creative economic models.

As we study these models and discuss what they are designed for we may be surprised to find ourselves taking their insights to heart. But, we can not forget that economics is sometimes a form of brainwashing. There is a robust literature that demonstrates that taking economics classes makes students more likely to behave in the ways that the models they study say they should. Study a model, behave as such. Study a different model, a different way of being emerges.

In this class, we will begin to liberate economics from the economists.

Description

In this year's Winter Session, we will engage in an in -depth reading of Argentine fiction writer and essayist Jorge Luis Borges, an author widely but wrongly regarded as "a-political." In the course, we will reveal the way in which his "fictions" were in fact a massive attempt to respond to the politics of his time—the advent of fascism and totalitarianism—and thus will help us interrogate "the political" in its most complex manifestations: the question of political forms, the question of the institution of the new in historical time, and the question of alterity. As we are witnessing during these turbulent times, anti-Fascists come in different forms and shapes: small "d" democrats, anarchists, Marxists, and libertarians from all parts of the world have experienced their confrontation with fascism as the defining moment of their lives. Not everyone, however, managed to become one of the most original and influential twentieth century authors because of such confrontation. In this seminar, we will offer a multilayered political reading of Borges' fiction and non-fiction writings. Our first approach to his texts will be concerned with his non-fiction critique of Nazism and Fascism in Europe and Latin America. During

the following sessions, we will structure the course as an exploration of the theoretical implications of Borges' "detour of fiction," and we will do so by diving into three conceptual aesthetico-political dichotomies that his writings will help us interrogate: that of chaos and cosmos, the imaginary and the real, and the same and the Other. While doing this, the course will also engage his different stories and essays from the perspective of three modern and contemporary thinkers and contemporary philosophers: political and social theorist Claude Lefort, Jewish German American political thinker Hannah Arendt, and American philosopher Judith Butler.

Description

This course will not be just about Argentine writer Jorge Luis Borges; but it will all happen in the inconceivable Borgesian pluriverse. The course is about the aesthetics of politics, and doubly so. On the one hand, it is about the way in which art in general, and Borges in particular, engage in the interrogation of the political institution of the social—that is, about the way in which our aesthetic practices try, and sometimes manage, to interrogate the way in which societies shape, stage, and make sense of themselves. On the other hand, the course is also about a particular understanding of that political institution of society. Societies institute themselves in a plurality of ways. This plurality could be simplified in three forms: theological, epistemic, and aesthetic. With and within Borges short stories, essays, and other hybrid forms of his writing—plus the help of a few political philosophers we will read together with Borges—we will engage in the exploration of what we will call the aesthetic, as opposed to theological or epistemic, political horizon.

Argentine writer Jorge Luis Borges enjoys an almost mythical global stature. He has been influential in the world of literature, of course, but his work has appeared as an inspiring and sometimes unexpected presence in the fields of film, fine arts, theatre, and even television and

other contemporary cultural and visual forms. Borges' work has also been engaged by many philosophers and social theorists such as Foucault, Derrida, Deleuze among many others. What is somehow surprising, however, is that given the fact that many of his short stories, poems, and essays have often dealt with political matters, these terribly insightful and conceptually rich incursions into the field of the political has not been sufficiently explored yet. In this course, Borges will be taken seriously as a thinker of political forms, political imagination, and political alterity and his work will be interrogated in dialogue with four highly influential twentieth and twenty first century philosophers: William James, Claude Lefort, Hannah Arendt, and Judith Butler.

Description

Research Seminar on the Aesthetics of Politics. In this year's edition of the Research Seminar on the Aesthetics of Politics we will engage in an in-depth reading of two different but deeply intertwined aesthetico-political authors: Argentine fiction writer Jorge Luis Borges and French philosopher Maurice Merleau-Ponty. The strategy we will follow will reverse the usual expectations regarding these thinkers. In the case of Borges, an author widely but wrongly regarded as "a-political", we will reveal the way in which his "fictions" were in fact a massive attempt to respond to the politics of his time-the advent of fascism and totalitarianism-and thus will help us interrogate "the political" in its most complex manifestations: the question of political forms, the question of the institution of the new in historical time, and the question of alterity. In the case of Merleau-Ponty, a passionately involved left-wing political thinker, we will analyze the way in which it was in fact his aesthetic and most philosophical writings rather than the strictly political ones those that might give us the most profound understanding of political life. The first week of the seminar will offer a multilayered political reading of Borges' fiction and non-fiction writings. As we just said, although he was not a "political" writer in the conventional sense of the word, his texts

constantly engaged in the indirect interrogation of our shared, political world. Our first approach to his writings will be concerned with his non-fiction critique of Nazism and Fascism in Europe and Latin America. During the following sessions, we will structure the course as an exploration of the theoretical implications of Borges' "detour of fiction," and we will do so by diving into three conceptual aesthetico-political dichotomies that his writings will help us interrogate: that of chaos and cosmos, the imaginary and the real, and the same and the Other. Although Merleau-Ponty's early phenomenology of perception and his essays on art, politics, and language already showed an affinity between the aesthetic phenomena of expression and style, and the political and cultural dynamics of society at large, it was his late notion of flesh that became crucial for grounding what this course assumes to be his aesthetico-political understanding of politics, revolution, and democracy

Description

Can an analysis of musical techniques interact with an analysis of whether social and political goals are effectively communicated in a piece of music? When is music effective politically and when is it not? Can overt political goals compromise musical effectiveness? Can they strengthen musical effectiveness? How do exogenous goals effect Music Composition in different styles and genres?

In this course we will ask these questions and more as we examine political music from different genres including, pop, experimental concert music, opera, folk music, commercial music, and other styles.

Students will be encouraged to make their own explorations and discoveries, and they will be expected to form their own analytically supported opinions.

School of Dance Department

CalArts Dance acknowledges a history of injustice, inequality, and violence that affects all aspects of society, including institutions of higher education and the arts. We stand in solidarity with those protesting around the world against racial violence and police brutality. CalArts Dance is committed to anti-racist pedagogy and art-making to ensure justice, equality, and safety for all members of its community. To hold ourselves accountable, we are dedicated to further educating ourselves, diversifying our faculty, and continuing to fight systemic racism in our programs.

The Sharon Disney Lund School of Dance educates the dance artist of the future—agile, intelligent, innovative, and in command of an expanded skill set that can meet the demands of a 21st century professional dance career.

To study dance at CalArts means being part of a one-of-a-kind creative community, working in a dynamic environment that fosters collaboration, experimentation, and creative connections with talented peers from music, theater, film, interactive media, and other artistic disciplines.

Comprehensive BFA and MFA programs build high-level proficiencies in performance technique, choreography, dance production technologies, and critical understanding of the art form—all within a cultural context that can be performed anywhere in the world.

CalArts's dance programs offer ample creative exchange and collaboration between professionally motivated students and a faculty of practicing artists. Students develop their individuality and creativity as artists who specialize in using the body as a space for exploration.

Viewed as young professionals, they produce a concentrated season of aesthetically diverse work each semester. Class work includes guidance on performing and choreographing for stage, nontraditional spaces, social media, commercials, filming, editing, photography, writing business plans, advice on creating a company, and developing each individuals artistic mission.

The School's performance calendar includes over 40 performance opportunities featuring esteemed repertory and work by guest artists, faculty, and students each year. These concerts include the Open House Dance Concert, the BFA II Solo Dance Concert, the Winter Dance Concert, Intermission, the MFA Thesis concerts, the Spring Dance Concert, performances in Los Angeles art spaces, and more.

Over 25 guest artists are welcomed each year for classes, setting repertory, workshops, and giving lectures. Along with guest artists, we have artists-in-residence that engage with students while making work at CalArts.

Various opportunities to study abroad and engage in international dialogue are available to dance students in places such as London, Zurich, Seoul, Paris, and Taipei.

This rigorous schedule provides students with regular performance opportunities and engagement with professional artists, which in turn support the development of highly skilled dance artists and inspire larger ways to think about what dance truly is.

DANC.BFA - Bachelor of Fine Arts - Dance

General

Program Title	School	
Bachelor of Fine Arts - Dance	School of Dance	
Degree	Program Level	CIP Code (National ID)
BFA - Bachelor of Fine Arts	Undergraduate	50.0301

Program Description

4-Year Program

The BFA curriculum builds a strong foundation in ballet, hip hop and contemporary dance styles. Two technique classes a day, four days a week provide a consistent means for developing the necessary skills throughout the four-year degree program. Dance Composition and Choreography also constitute a steady curricular pathway through the four years. Numerous concerts are held every year to provide opportunities for showcasing student choreography, as well as providing performance opportunities for student, faculty and guest artist works. In the Spring semester of the second year, all BFA II students present a solo of their own making. In addition, all students are required to choreograph a group work for a school concert during their residency. All students and faculty participate in monthly dance showing. This provides a venue for the presentation of works in progress combined with artistic feedback from faculty and fellow students, fostering a unique collegial community.

The curriculum offers comprehensive instruction in all areas of dance production. Courses in stagecraft, lighting design, costume design, audio and video production prepare students for a variety of design and production crewing responsibilities. In addition, students take courses in music for dance and dance for camera, gaining theoretical, practical and creative perspectives on the relationships between dance and media. At CalArts, students also benefit from courses offered in the Schools of Art, Theater, Music, and Film/Video, which can be taken to supplement and deepen one's understanding of dance in relation to these art forms. Collaborations and multimedia productions are prevalent and encouraged.

In addition to annual reviews, BFA Dance candidates are required to pass a Mid-Residence Review and a Graduation Review in order to complete the program.

General

Program Title	School	
Master of Fine Arts - Choreography	School of Dance	
Degree	Program Level	CIP Code (National ID)
MFA - Master of Fine Arts	Graduate	50.0301

Program Description

2-Year Program The MFA curriculum enables each graduate student to develop and refine his or her own personal aesthetic. It includes seminars dealing with topics in professional dance-from organizing concepts in choreography to meeting the practical demands of producing concerts to identifying larger artistic and career goals. The curriculum also features classes in technique composition, dance theory, costume design, dance production, dance on camera, and digital media and editing. In the first year, students are required to create and present three original works. In consultation with the Dean, students identify a progression of works created for presentation in various concerts through the first year of residency. Works are presented for feedback during Dance Showings, a weekly venue that involves all faculty and students.

The Thesis Concert is produced in the second semester of the second year. A committee consisting of the Dean and at least three faculty members is assigned at the outset of the second year. As part of the preparations for the Thesis Concert, students are required to submit a written proposal, which must be approved by faculty before any thesis work is begun. Each MFA student receives a generous stipend for the thesis project and has the opportunity to collaborate with artists and designers from all the other Schools within the Institute. MFA candidates must hold open auditions for the Thesis Concert.

Description

Introduction to Critical Dance Studies: Corporeality, Race, Gender, Class introduces students to the interdisciplinary field of critical dance studies and its historical, ethnographic, and theoretical approaches. Dance studies attunes students to ways of analyzing bodies in socio-cultural contexts while also developing an understanding of historical trajectories of dance on and off stage. Students will acquire knowledge of "traditional" western dance history then complicate it with the study of revisionist dance history that accounts for issues of transnationalism, the "global," indigeneity, race, gender, sexuality, and class. The types of dance examined in this course include concert dance (ballet, modern, contemporary), social dance (from salsa to hip-hop), and dance on screen in contexts as diverse as the proscenium stage, the museum, the space of ritual, the club, television, and other public and domestic spaces. Students will acquire vocabulary to analyze formal aspects of choreography. This course will address the ways in which bodies, dancing and otherwise, reflect concepts and realities of nation, gender performance, racial dynamics, power, taste, and labor. In addition to gaining a background in the history of dance discourse itself, students will gain facility with critical concepts such as choreography, corporeality, embodiment, and performance. Students will engage in close readings of texts and dance, developing discursive tools of analysis (formal/aesthetic and cultural) in written and presentation form. Students will also develop an understanding of how dance interacts with other arts. This course will be conducted in seminar format; as such, it is participatory. Requirements include weekly readings, writing assignments in response to readings as well as live and recorded dance, several short essays, a group presentation, and attending up to two live performances in Los Angeles as a class. While this course is designed as the first semester BFA dance studies course in a series of four, it is open to students outside of dance with an interest in the material.

Students should expect to spend approx. \$100 for books and performances.

Description

The Anthropology of Dance: Diaspora, Identity, Culture examines dance in a global context, placing diverse examples of choreography in dialogue with foundational theories and contemporary debates in globalization, nationalism, transnationalism, diaspora, orientalism, and postcolonialism. With a special focus on the anthropology of dance (and dance in ethnography, past and present), this course further explores the interdisciplinarity of dance studies, which draws from fields such as anthropology, performance studies, critical race theory, and queer theory. At the core of this course is an investigation of subjectivity and the relationship between the body and agency. Is dance merely a reflection of society? Can it incite political change? Keeping in mind the relationship between self and other (and individual and society), we will look at the work of dance artists from countries such as the Democratic Republic of Congo, Brazil, India, China, the US, France, Morocco, Senegal, and Thailand to see how they conceive of the body in relation to space, society, and nation, and to consider the ways movement circulates globally in and across time. We will also bring in discussions of the dance studies-specific terms, choreopolitics (Lepecki) and geo-choreography (Osterweis). In looking at dance-and its scholarship-as a practice, we will keep in mind the ways social and vernacular dance become translated onto the concert stage, in various cultural contexts of circulation and exchange. Our readings will be informed by anthropologists and theorists including Michael Taussig, E. E. Evans-Pritchard, Theresa Buckland, Sally Ann Ness, Deidre Sklar, Anya Peterson Royce, Achille Mbembe, Barbara Browning, Mark Franko, Karl Marx, Edward Said, Judith Butler, Michel Foucault, Ananya Chatterjea, Thomas DeFrantz, and more. This is a participatory seminar; students

will be expected to attend every class, write weekly responses to readings and performances, write two short essays, attend up to two performances in Los Angeles as a class, and submit a final ethnographic research essay. While this course is designed as the second semester BFA dance studies course in a series of four, it is open to students outside of dance.

Students should expect to spend approx. \$100 for books and performances.

Description

Open to BFA1 students only.

This course will provide students with a unique opportunity to analyze dances from the 20th Century modern dance repertory. Within a broad historical perspective, modern dance artists will be examined. Through video viewing, readings, writings and discussion, students will gain a critical perspective on the aesthetic and philosophical contributions of the primary artists within this tradition. Attention to movement vocabulary, style and artistic interests and trends will provide perspective on the artistic landscape in which we as contemporary artists are working. This is a year-long course, though students may register for each semester independently. The fall semester focuses on the emergence of modern dance from ballet, through the 1940's. The spring semester begins with the primary choreographers of the 1950's and continues to the present.

Description

Dance After 1960: Virtuosity, Deskillling, and the Postdramatic interrogates international and local developments in concert, popular, screen, and subcultural dance, within and across decades, focusing on the 1960s to the present. It is a critical dance studies course in which students will continue to practice multiple approaches to researching and writing about dance. Because dance studies is an interdisciplinary field that engages with performance studies, history, anthropology, literary studies, critical race studies, gender studies, disability studies, film studies, and postcolonial studies, students will learn to identify and employ various lenses in their readings and analyses. Methodologies practiced in this course are ethnography, performance analysis, and the argumentative essay. Students will also have the opportunity to embody theory through praxis, improvising informally in various locations throughout the semester. Keeping in mind relevant historical and political events, concepts explored include the body, race, class, gender/sexuality, nation, virtuosity/disability, postmodernism, dramaturgy, deskillling, and the postdramatic. Dance works and practices from the U.S., Africa, Europe, Latin America, Asia, "home," and the internet will be represented. The following are examples of artists, movements, and works considered in this course: The Judson Dance Theater, Merce Cunningham, contact improvisation, aerobics, Fame, MTV, voguing, Twyla Tharp, William Forsythe, Pina Bausch, Narcissister, Miguel Gutierrez, John Jasperse, Trajal Harrell, Desmond Richardson, Ralph Lemon, and Faustin Linyekula. Theorists and historians include Susan Foster, Mark Franko, Brenda Dixon Gottschild, André Lepecki, Judith Butler, Shannon Jackson, Tavia Nyong'o, Susan Stryker, Claire Bishop, Ramsay Burt, Hans Thies Lehmann, and more. This is a participatory seminar course. Students will be expected to attend all classes, attend two performances in Los Angeles as a class, write weekly responses to readings and performances, write three short essays, and give a final presentation. While this course is designed as the third semester BFA dance studies course in a series of four, it is open to students outside of dance with an interest in the material.

Students should expect to spend approx. \$100 for books and performances.

Description

The Body in Performance: Liveness, Activism, Feminisms is a course that inquires into the practices of feminist artists who call upon the live (often explicit) body in performance. We will analyze the ways in which these performances critique culture at large and trouble distinctions between dance, theater, performance art, activism, and visual art. The artists in question (many of whom comment on their training in dance) include (but are not limited to) Adrian Piper, Narcissister, Yoko Ono, Ann Liv Young, Annie Sprinkle, Carolee Schneemann, Yve Laris Cohen, Carmelita Tropicana, Marina Abramovic, Senga Nengudi, Ron Athey, Lee Bul, and Aliza Shvarts. We will read writing by scholars and artists such as Amelia Jones, Claire Bishop, Judith Butler, Rebecca Schneider, Adrian Piper, Trinh Minh-ha, Jane Bennett, Tavia Nyong'o, Anna Fisher, Jeanne Vaccaro, Linda Williams, Jennifer Doyle, Jose Munoz, bell hooks, Susan Stryker, and Coco Fusco. Major topics include performance, presence, abjection, embodiment, sexuality, dance in the museum, de-/re-skilling, vital materialism, transnational feminism, difficulty, obscenity, racial kitsch, and pain/pleasure. Moving from the midtwentieth century to the present through international contexts, we will study these artists and concepts through the interdisciplinary lenses of performance studies, gender and sexuality studies, critical race theory, critical dance studies, porn studies, and visual studies. While we will attune ourselves to the history of performance and live art, the course will be organized thematically (not chronologically), and case studies will include an artist (or set of artists) and theory/scholarship relevant to that artist. This course requires close reading of texts and art. It also includes a practice-as-theory component in which you will have the opportunity to experiment and make performance to supplement otherwise written work. While this course is designed as the fourth semester BFA dance studies course in a series of four, it is open to students outside of dance with an interest in the material.

Students should expect to spend approx. \$100 for books and performances.

Description

This course examines the various roles that dance plays in human culture. Through video viewing, readings, writings and discussions, students will gain a critical perspective on dance within religious, social and theatrical contexts. Examples are drawn from American culture as well as from selected countries around the world to provide a greater appreciation for the creative

diversity of human expressivity through dance. Dance and World Cultures is a year-long course, though students may register for each semester independently. The first semester establishes a theoretical framework for dance observation within a cross-cultural context and then proceeds to examine examples of dance within religious contexts. The second semester examines examples of social dance and dance as art and entertainment.

Description
"Black Dance in America: Movement, Culture, and Identity"

Course Description: This course offers an in-depth exploration of Black dance in America, tracing its historical development, cultural importance, and profound influence on contemporary dance forms. Through a blend of lecture, movement practice, discussion, and critical analysis, students will engage with the deep lineage of African diasporic movement traditions and their enduring impact on American dance. The course covers a range of styles and techniques, including African, Jazz, Tap, Hip-Hop, and Contemporary dance, grounding them within the context of socio-political movements and themes of resistance, resilience, and liberation. Students will examine the work of pivotal Black choreographers and companies-- such as Alvin Ailey, Katherine Dunham, Pearl Primus, Ronald K. Brown, Garth Fagan, Camille A. Brown, Bill T. Jones, and Rennie Harris--who have used dance as a powerful form of cultural expression and activism. Throughout the course, students will reflect on how Black dance traditions inform their own understanding of movement, while challenging culturally biased narratives within dance history. By considering Black dance as both an artistic practice and a force of social change, students will gain a nuanced appreciation of its role in shaping and expanding the landscape of American dance.

Description

"Talent Show" is co-taught by Sharon Lockhart (Photo and Media) and Ariel Osterweis (Dance). This is a course in practice and theory, and explores topics such as amateurism, aspiration, and adolescence. Working through questions of format (stage, television), function (in schools and community centers), audience and judgement, documentation (photography, TV, film), geography, and culture, students will collaboratively explore their own latent or shrouded talents that lie beyond their métier training and expertise as well as visit with (or study) artists working through these ideas. Artists include: Mike Kelley, Marnie Weber, Jim Shaw, Phil Collins, Chuck Barris, Jack Smith, Edgar Arceneaux, and more. With an eye toward U.S. and global entertainment, this course will interrogate the troubling relationship between freak shows, circus, talent shows, and reality TV. Fieldwork and research will be conducted in multiple formats. In addition to generating and documenting performance exercises, students will have the opportunity to write in several modes. This year, the semester culminates with Talent Show at REDCAT theater! This course is open to the Institute (with permission of instructors), including selected BFAs, and all interested MFA, MA, and BFA students must obtain permission of the instructors.

Description

The Culture Wars: The Political Body in Performance

The Culture Wars: The Political Body in Performance is a graduate level course that focuses on the relationship between national US politics, arts funding, censorship, gender/sexuality, religion, and race. It covers the history leading up to the "NEA Four," spending a bulk of time with the 1980s and 1990s, then will move into the Trump/COVID era. Questions asked in this course include, how does the "New Jim Crow" (its anti-Black violence, including the disproportionate murder and incarceration of Black men) intersect with Reagan's disregard for the AIDS Crisis and defunding of the arts? How is the gay male body rendered a "contagion" during the

AIDS pandemic? What is the relationship between politics and degrees of sexual concealment and explicitness? How do national discourses interpellate American subjects of the State? What is the role of the body in performance during the Culture Wars? Relatedly, how do Presidents such as Reagan and Trump harness charisma to "perform" their own kind of political "theater" during the Culture Wars, and how do citizens perform gender, race, and class in everyday life?

Open to the institute, this course is open to graduate students across campus, and fulfills critical studies credit. The Culture Wars engages a methodology that includes scholarly research, reading, and writing, as well as performance and art experiments and collective projects and actions. While offered through the School of Dance, this course is decidedly interdisciplinary and rigorous, and commits to an inclusive and anti-racist environment. The Culture Wars will be attuned to all areas of visual and performing arts, and graduate students from every métier are welcome.

Description

Critical Dance Studies: Corporealities and Cultures is a graduate course that familiarizes students with the interdisciplinary field of critical dance studies and its historical, ethnographic, and theoretical approaches. Dance studies provides students with ways of analyzing bodies in socio-cultural contexts while also developing an understanding of historical trajectories of dance on and off stage. Students in this course will learn and generate vocabulary to analyze formal aspects of choreography. This course pays special attention to issues of race, gender, sexuality, and class. The types of dance examined include concert dance (ballet, modern, contemporary), social dance (from salsa to hip-hop), and dance on screen in contexts as diverse as the proscenium stage, the museum, the space of ritual, the club, television, and other public and domestic spaces. This course will address the ways in which bodies, dancing and otherwise, reflect concepts and realities of nation, politics, gender performance, racial

dynamics, power, taste, and labor. In addition to gaining a background in the history of dance discourse itself, students will acquire facility with critical concepts such as "choreography," "corporeality," "embodiment," and "performance." Students will engage in close readings of texts and dance, developing discursive tools of analysis (formal/aesthetic and cultural) in written and presentation form. Students will also develop an understanding of how dance interacts with other arts. This course will be conducted in seminar format; as such, it is participatory. Requirements include weekly readings, writing assignments in response to readings as well as live and recorded dance, two short essays, one research paper, one presentation, and attending up to two live performances in Los Angeles as a class. While this course fulfills a Dance MFA requirement, it is open to graduate students across campus.

Students should expect to spend approx. \$100 for books and performances.

Description

This graduate course introduces students to the interdisciplinary field of performance studies. We will investigate performance and performativity as theoretical concepts influenced by-and influencing- trends in anthropology, theatre, dance, and visual, rhetorical, gender, and cultural studies. This course takes into consideration and complicates assumptions about embodiment, spectatorship, agency, subjectivity, action, and community. Troubling the supposed divide between practice and theory, this course will provide the opportunity to exercise performative writing and ethnography, as well as live performance in an academic context. In a collaborative spirit, we will share work with each other. Readings will include selections from Schechner, Jackson, Phelan, Foster, Lepecki, Taylor, Turner, Taussig, Brecht, Schneider, Moten, Hartman, Austin, and Butler. In addition to creating written work, students will attend up to two performances in LA, and have the opportunity to create a short performance work. Ultimately, we will keep in mind that performance

DAIC540 - Choreography & Textuality

Course Long Title
Choreography & Textuality

School(s)
School of Dance

Academic Level
GR - Graduate

Min Credit Hours:
3

Choreography and Textuality: Bodies on the Page, Words on the Stage is a graduate course that will explore relationships between choreography and writing. Presumably, choreography is to dance what writing is to language; what would it mean to "choreograph" words onto the page or to "write" dance onto the stage? Alternatively, what does text bring to questions of the corporeal, and what do dance and the body bring to questions of the textual? In mining such questions, we will attune ourselves to works of dance, performance, prose, and poetry that deconstruct and rearrange conventions of meaning, representation, communication, embodiment, and abstraction through unexpected treatments of form and content. When and how do choreographic, poetic, and critical modes coexist? This course inquires into William Forsythe's engagements with the work of Anne Carson and Virginia Woolf, Germaine Acogny and Kota Yamazaki's collaborative choreography based on a novel by Boubacar Boris Diop, work by The Wooster Group that draws from William Forsythe and Gertrude Stein, Ralph Lemon's parachoreographic texts and use of Kathy Acker's writing, Richard Move's archival work on Martha Graham, Arthur Pita's production of Kafka's *Metamorphosis*, Nijinsky's diaries, Pina Bausch's *tanztheater*, Gelsey Kirkland's autobiography, choreography by Miguel Gutierrez, Jerome Bel, and Ohad Naharin, and writing by Franz Kafka, Barbara Browning, Maggie Nelson,

DAIC550 - Extreme Body in Performance

Course Long Title
Extreme Body in Performance

School(s)
School of Dance

Academic Level
GR - Graduate

Min Credit Hours:
3

The Extreme Body in Performance: Sexuality, Race, Labor is a graduate course that engages students in the interdisciplinary field of performance studies, paying particular attention to how the "extreme" body generates and disrupts socio-cultural constructions of sexuality, race, and labor through performance and live art. How do we "read" bodies; how do bodies "read" us? Keeping in mind that performance operates as both a critical lens and an object of study, this course inquires into practices of artists of color and/or queer or feminist artists who call upon the live (often explicit or "difficult") body in performance. We will analyze the ways in which such performances critique culture at large and trouble distinctions between dance, theater, performance art, activism, and visual art. Concepts explored include embodied memory/archive, surface/mutability, virtuosity/disability, queer of color critique, racial kitsch, mixed-race and trans identity, abjection, reskilling, vital materialism, difficulty, obscenity, freakery, and pain/pleasure. The artists in question (many of whom comment on their training in dance) include Adrian Piper, Narcissister, Yoko Ono, Ann Liv Young, Annie Sprinkle, Carolee Schneemann, Yve Laris Cohen, Carmelita Tropicana, Marina Abramovic, Senga Nengudi, Ron Athey, Lee Bul, Aliza Shvarts, and more. We will read writing by

scholars and artists such as Adrian Piper, Rebecca Schneider, Amelia Jones, Claire Bishop, Judith Butler, Jane Bennett, Tavia Nyong'o, Linda Williams, Jennifer Doyle, Jose Munoz, bell hooks, Susan Stryker, Roderick Ferguson, Saidiya Hartman, Alison Kafer, Mark Anthony Neal, Hortense Spillers, and Anne Anlin Cheng. Moving from the 1960s to the present through international contexts, we will study these artists and concepts through the interdisciplinary lenses of performance studies, gender and sexuality studies, critical race theory, critical dance studies, porn studies, and visual studies. In addition to generating written work, students will attend up to two performances in LA, and may have the opportunity to create a short performance work. Requirements include close reading of text and performance, weekly written responses on text or performance, up to two short essays, and one longer final essay. While this course fulfills a Dance MFA requirement, it is open to graduate students across campus.

Description

Open to Dance School students only.

A two semester course consisting of a series of activities, exercises, and assignments. Designed to stimulate the discovery and development of the creative impulse in movement in the individual student. A significant component of the course is dedicated to the peer review and critique, and the founding of a solid communication base within the peer group.

140

School(s)

School of Dance

Academic Level

UG - Undergraduate

Credit Hours

Min Credit Hours:

2

Description

This class is a series of in-class activities, readings, and improvisational assignments worked on outside of classroom hours that will be performed and discussed in class. Movement Improvisation is designed to introduce first year students to the world of improvisation. Students will focus on improvisation and movement invention in order to serve their choreographic projects. We will take multiple avenues into accessing movement improvisation: sourcing the body (anatomical), sourcing outside the body (architecture/nature/visual information), dancing with music and cameras, as well as practicing improvisation in performance in solos and ensembles. This is a 2 credit course.

Description

Course open to BFA2 Dance School students only. Through assignments, observation, discussion and constructive critical assessment this course will continue the exploration of movement vocabulary and finding one's own choreographic voice. The ongoing exploration of quality and essence of movement will be investigated as we manipulate space, time dynamics and energy. How do we use these tools to make different statements and produce abstract movement studies? Sound both music and voice will be introduced to produce accompaniment and to enhance these differing qualities. Exploring the role of choreographer by transferring one's own movement vocabulary to others will take precedent second semester. We will investigate small group forms and the design possibilities that entails by working in both duets and trios.

Description

Designed for performing artists and anyone with a background in physical practice, this course provides opportunities to cultivate advanced skills in movement improvisation in a cross-disciplinary environment. Content includes practice in solo, contact, and ensemble

improvisation, with an emphasis on developing skills for safe, organic and virtuosic partner dance. Contact skills include jumping and catching, low and high flying, safe falling, deepening of sensory awareness and listening skills, as well as moving in and out of contact. Ensemble skills include deepening awareness of how and when to support the dance of another or take the spotlight. Specific attention will be placed on the development of the 'score' as a tool for creating focused, yet spontaneous performances.

Min Credit Hours:
0.5

Description
Open to dance school students. By permission of instructor for all others. In this course we will learn, absorb, and dance excerpts of works of legendary contemporary ballet choreographers, with

a focus on picking up movement quality, musicality, building stamina and technical resilience, and finding the pleasure in moving together as a group, also removing any gender barriers to performing the works. There will be a warm up before beginning the repertoire element of the class. The over used expression 'Contemporary Ballet' refers in this case to works created on dancers with both contemporary dance technique and ballet technique skills. The class is open to dance school students and to students from other schools with substantial dance training by permission of the instructor.

Description

Rich+Tone, for the first time in their 20+ year career, will offer an intensive workshop in an academic setting to Dance and F/V students in choreographing and directing commercial projects for film and video. The "Experience" will include

15 students from each school who will workshop a creation process wherein real life working conditions will be simulated. Evolving from Dancers, to Choreographers and then to Creative Directors, Producers, and now as Directors, Rich+Tone are one of the most sought after creative teams in Hollywood and a driving force behind top live shows, major tours, primetime television and acclaimed films. Their credits include Madonna's Superbowl halftime show; Dave LaChappelle's critically acclaimed film "Rize" for which they served as producers of the film, choreography coordinators, and producers of the soundtrack; and numerous television, movies, music videos, tours for top tier recording artists, and commercials. They are currently movement consultants on Christopher Wheeldon's Broadway production of "MJ: The Musical" opening in December.

Description

Permission of Instructor only.

Independent Study is a semester-long agreement developed between a student and a faculty member to discuss ongoing work, a particular project, or a course of study.

This agreement, including frequency of meetings and unit value, will be drawn up on an Independent Study Contract.

The Independent Study contract is available beginning two weeks prior to the start of the Fall and Spring term. Independent Studies are not available in the Summer or Winter sessions.

Once submitted, your request will be reviewed and if approved, will be added to your schedule by the Registrar. The contract can be found by clicking "<https://calarts.formstack.com/forms/is>">Here

Credit Hours

Min Credit Hours:
0.25

Description
This contemporary dance workshop explores a mix of skills from contact improvisation, group lifting, group partnering, weight-sharing, flying and catching. We will learn conditioning skills associated with athletic dancing, as well as how to safely lift one another and be lifted. We will develop nuanced and thoughtful partnering skills with higher aspirations to garner more compassion in the way we dance, and relate to our fellow dance partners. The goal of this class is to introduce these skills to the trained dancer as a means to widen their tool belt, giving them a strong foundation and a competitive edge in the dance world. We will begin this class with improvisation and slowly build to setting material. Prior experience in partnering is highly encouraged.

DPER

Course Number

290W

School(s)

School of Dance

Academic Level

UG - Undergraduate

Credit Hours**Min Credit Hours:**

0.25

Description

"Beyond the Noise" invites performance artists to explore and challenge interference as a barrier to connection. In this immersive workshop, we'll investigate how disruptions in the body, relationships, and space obscure meaning.

Participants are encouraged to register with a partner. Together, you'll engage in dynamic physical theater exercises that promote deep listening, clarity, and bravery. Throughout the creative process, we'll discuss the tension between noise and a clear mind, examining how it influences your work.

This is a space for imagination, where you'll uncover how the body conveys narrative through actions. You will compose, improvise, and build a short performance that reveals untold stories.

Scenic objects will be introduced to explore the expressive poetics of the body in space.

Description

With an eye for technique and mentorship opportunities, choreographer Laura Gorenstein Miller will introduce students to a fiercely physical, hyper-romantic form of partnering. By workshoping Miller's All Shook Up, students will explore how to process and embody meaning without the limitation of language.

All Shook Up is a four-part suite set to the sultry, genre-defining songs of Elvis Presley. Miller, for the Winter Session, will first set a section that demonstrates how dance can serve as a medium for protest, specifically through the lens of Roe vs. Wade. Then Miller will workshop and collaboratively design a second section of

viscerally romantic gender-inclusive duets with the students in real-time. The dance situates love and loss as concurrent forces, indulging audiences' desire to share in a night of resistance, jubilation, and passion.

Miller has premiered work at venues around the world, including at The Joyce Theater, Lincoln Center, The Royal Opera House, UCLA's Royce Hall, Teatro Nacional de Costa Rica, the Alberta Jubilee Theaters, The Getty Center, The Getty Villa, and The Broad Stage. Her choreography has been set on American Ballet Theater, American Ballet Theatre's Studio Company, CalArts, The Milwaukee Ballet, and Bodytraffic, among others. Miller has choreographed numerous animated films, including the Oscar-nominated Puss In Boots, Madagascar 3, The Addams Family, the Netflix animated feature Trouble, and Rise of the Guardians. She recently choreographed an animated feature film with original music by composer Alan Menken for Skydance and Apple Studios and is now choreographing The Smurfs for Paramount Pictures, starring Rhianna as Smurfette. Miller has worked at several academic institutions, including as a Guest Lecturer at Brown University and a Guest Artist at the CalArts Choreolab. Miller has also choreographed augmented and virtual reality projects for New Frontiers at the Sundance Film Festival, Microsoft, and the Future of Storytelling. She is the founder of Helios Dance Theater, a graduate of CalArts, and studied at the Laban Center in London.

Description
Animating Dance and Performing with Animation is a class designed for dancers and animators. While expanding their curiosity and appreciation of each other's practice, students will learn new skills, and further their creative approach. Artists from both disciplines will be challenged to be at times, the practitioner, the researcher or the director while exploring the body in movement. Through practice, research, and discussions, all participants will be provided with an opportunity to share individual sources of inspiration, motivation and interpretation. Collaborative teams will build up and develop an original project that will be presented at the end of the semester.

Course Long Title
Ballet Teacher and Ballet Accompanist

Subject Code	Course Number
DPER	380

School(s)
School of Dance

Academic Level
UG - Undergraduate

Credit Hours

Min Credit Hours:
1

Description
This course is designed for BFA students of the Sharon Disney Lund School of Dance and Herb Alpert School of Music, and will be credited as part of the Pedagogy Minor for students enrolled in the minor.

The foundations and history of ballet include live accompaniment by a skilled musician who understands the curriculum, as well as the shape and purpose of each element of the ballet class, and can support the instructor and students, and in many instances pertaining to musicality, co-teach with the instructor. Many ballet Instructors including the legendary CalArts founding ballet teacher Mia Slavenska consider the live accompanist to be just as important as the instructor to the success of the class in reaching its pedagogical goals.

The ballet teacher and accompanist form a team in a tradition that goes back over 300 years to the origins of the art form. Music is often the driving force and inspiration for dance. In a ballet class the musician, though hugely important, takes a back seat to the needs of the dance students and the class.

The class will familiarize students from the dance school with communicating anatomical underpinnings of ballet training, the structure and objective of each exercise that constitutes the progression of the ballet class, and how to compose effective exercises, analyze students' alignment and execution, and provide constructive and effective corrections.

Students from the music school will be familiarized with commonly used repertoire for ballet class accompaniment, and principles of class structure and its progression.

Together, the faculty will demonstrate how to effectively communicate between teacher and accompanist to establish tempi and dynamics, and which music is optimal for each exercise, as well as familiarizing the students with the terminology of the ballet class.

Description
In this course, students will explore improvisation as the impetus for movement invention and dance making. Our improvisational exercises will employ internal forces like sensation, authentic movement, somatics, and external forces like site-based responsiveness and ensemble collaboration. Shifting the scale of our intention and attention over the course, we will try to become more aware of the interior and exterior impulses that move us. Students should expect to practice directing, performing, and offering feedback. We will close with each student devising their own score to be performed at the close of the session by their selected ensemble.

General

Course Long Title
Between Dance and Theatre

Subject Code Course Number
DPER 452

School(s)
School of Dance

Academic Level
UG - Undergraduate

Credit Hours

Min Credit Hours:
2

Description
This advanced class, led by Julie Bour, uses improvisational and compositional skills to guide performers in exploring movement, focusing on key dramaturgical choices such as storytelling, character development, abstraction versus realism and physicality. Students will investigate how time, space, rhythm, and symbolism intersect at the crossroads of dance and theatre, shaping dynamic performances that push the boundaries of both forms.

Students will develop their personal aesthetic, integrate kinesthetic poetry, and engage in collaborative work. Using tools like sound, speech, and objects, they will create material for structured improvisation or composition, refining technique while fostering creativity. The course promotes a playful environment where each discovery leads to new exploration.

Prerequisites:
Advanced stage performance experience.

Students will create a movement-based performance through weekly assignments and creative prompts. By analyzing existing works at the intersection of dance and theatre, they will identify various points of view and explore the scope of possibilities within this fusion of forms. This approach will help them define their own unique methodology for movement-based performance.

Students will expand their artistic vision and refine their personal vocabulary, mastering the ability to tell compelling stories through physical expression. They will make intentional choices to elevate their composition skills, develop a distinctive personal style, and push the boundaries of interdisciplinary performance. By the end of the course, students will create dynamic works that uniquely blend physicality and storytelling.

The course will include studio practice, group discussions, interdisciplinary collaboration, and presentations, allowing students to create, refine, and showcase movement-based performances.

Credit Hours**Min Credit Hours:**

0.25

Description

This contemporary dance workshop explores a mix of skills from contact improvisation, group lifting, group partnering, weight-sharing, flying and catching. We will learn conditioning skills associated with athletic dancing, as well as how to safely lift one another and be lifted. We will develop nuanced and thoughtful partnering skills with higher aspirations to garner more compassion in the way we dance, and relate to our fellow dance partners. The goal of this class is to introduce these skills to the trained dancer as a means to widen their tool belt, giving them a strong foundation and a competitive edge in the dance world. We will begin this class with improvisation and slowly build to setting material. Prior experience in partnering is highly encouraged.

Description

With an eye for technique and mentorship opportunities, choreographer Laura Gorenstein Miller will introduce students to a fiercely physical, hyper-romantic form of partnering. By workshoping Miller's All Shook Up, students will explore how to process and embody meaning without the limitation of language.

All Shook Up is a four-part suite set to the sultry, genre-defining songs of Elvis Presley. Miller, for the Winter Session, will first set a section that demonstrates how dance can serve as a medium for protest, specifically through the lens of Roe vs. Wade. Then Miller will workshop and collaboratively design a second section of viscerally romantic gender-inclusive duets with the students in real-time. The dance situates love and loss as concurrent forces, indulging audiences' desire to share in a night of resistance, jubilation, and passion.

Miller has premiered work at venues around the world, including at The Joyce Theater, Lincoln Center, The Royal Opera House, UCLA's Royce Hall, Teatro Nacional de Costa Rica, the Alberta Jubilee Theaters, The Getty Center, The Getty Villa, and The Broad Stage. Her choreography has been set on American Ballet Theater, American Ballet Theatre's Studio Company, CalArts, The Milwaukee Ballet, and Bodytraffic, among others. Miller has choreographed numerous animated films, including the Oscar-nominated Puss In Boots, Madagascar 3, The Addams Family, the Netflix animated feature Trouble, and Rise of the Guardians. She recently choreographed an animated feature film with original music by composer Alan Menken for Skydance and Apple Studios and is now choreographing The Smurfs for Paramount Pictures, starring Rhianna as Smurfette. Miller has worked at several academic institutions, including as a Guest Lecturer at Brown University and a Guest Artist at the CalArts Choreolab. Miller has also choreographed augmented and virtual reality projects for New Frontiers at the Sundance Film Festival, Microsoft, and the Future of Storytelling. She is the founder of Helios Dance Theater, a graduate of CalArts, and studied at the Laban Center in London.

Description

In this course, students will explore improvisation as the impetus for movement invention and dance making. Our improvisational exercises will employ internal forces like sensation, authentic movement, somatics, and external forces like site-based responsiveness and ensemble collaboration. Shifting the scale of our intention and attention over the course, we will try to become more aware of the interior and exterior impulses that move us. Students should expect to practice directing, performing, and offering feedback. We will close with each student devising their own score to be performed at the close of the session by their selected ensemble.

Course Number

580

School(s)

School of Dance

Academic Level

GR - Graduate

Credit Hours

Min Credit Hours:

1

Description

This course is designed for BFA students of the Sharon Disney Lund School of Dance and Herb Alpert School of Music, and will be credited as part of the Pedagogy Minor for students enrolled in the minor.

The foundations and history of ballet include live accompaniment by a skilled musician who understands the curriculum, as well as the shape and purpose of each element of the ballet class, and can support the instructor and students, and in many instances pertaining to musicality, co-teach with the instructor. Many ballet Instructors including the legendary CalArts founding ballet teacher Mia Slavenska consider the live accompanist to be just as important as the instructor to the success of the class in reaching its pedagogical goals.

The ballet teacher and accompanist form a team in a tradition that goes back over 300 years to the origins of the art form. Music is often the driving force and inspiration for dance. In a ballet class the musician, though hugely important, takes a back seat to the needs of the dance students and the class.

The class will familiarize students from the dance school with communicating anatomical underpinnings of ballet training, the structure and objective of each exercise that constitutes the progression of the ballet class, and how to compose effective exercises, analyze students' alignment and execution, and provide constructive and effective corrections.

Students from the music school will be familiarized with commonly used repertoire for ballet class accompaniment, and principles of class structure and its progression.

Together, the faculty will demonstrate how to effectively communicate between teacher and accompanist to establish tempi and dynamics, and which music is optimal for each exercise, as well as familiarizing the students with the terminology of the ballet class.

GR - Graduate

Credit Hours

Min Credit Hours:

0.25

Description

If ambivalence refers to "having mixed feelings or contradictory ideas about something or someone," what might dancing ambivalently imply? Why might the desire to dance ambivalently present itself? What are the social and aesthetic concerns of an ambivalent Dance historical lineage? In Arabella Stanger's, Dancing on Violent Ground: Utopia as Dispossession, Stanger analyzes how state and federal agencies collaborated with Euro-American Modernist pioneers of Dance and Architecture. Reviewing seminal dance works like that of Martha Graham's, Frontier (1935), and Graham's collaboration with the United States Indian Removal Act (IRA), Stanger illustrates how contemporary techniques of Euro-American dance and choreography, such as "taking up space", are referential to choreographies of urban renewal and settler colonialism.

Following the underside of reading Euro-American dance history, Saidiya Harman's, Scenes of Subjection: Terror, Slavery, and Self-Making in Nineteenth-Century America, identifies how mandated dances served as a measure of management and surveillance upon the enslaved in the plantation economy and Great Migration passage aboard ships of the Trans-Atlantic. Within Hartman's speculative and archival text, a counter-archive of Dance is presented to readers - an archive resistance to colonial impositions (Jasmine Johnson, Black Laws of Dance) - wherein the testimony of an enslaved woman, Mary Glover, appears through an act of refusal to dance: "(...) the promotion of innocent amusements and harmless pleasures was a central strategy in the slave owner's effort to cultivate contented subjection. However, the complicity of pleasure with the instrumental ends of slaveholder domination led those like Mary Glover to declare emphatically, "I don't want (that kind of pleasure)." (Hartman, 11)

How might an orientation of ambivalence lead us to towards a multidirectional understanding of dance and choreography?

How might thinking with dance, beyond the dominant discourse of consent and pleasure, reveal Dance's entanglement with aesthetic, sociopolitical, and necro-political practices for disciplining the body?

Description

"Beyond the Noise" invites performance artists to explore and challenge interference as a barrier to connection. In this immersive workshop, we'll investigate how disruptions in the body, relationships, and space obscure meaning.

Participants are encouraged to register with a partner. Together, you'll engage in dynamic physical theater exercises that promote deep listening, clarity, and bravery. Throughout the creative process, we'll discuss the tension between noise and a clear mind, examining how it influences your work. This is a space for imagination, where you'll uncover how the body conveys narrative through actions. You will compose, improvise, and build a short performance that reveals untold stories. Scenic objects will be introduced to explore the expressive poetics of the body in space.

Course Long Title

between dance and theatre

Subject Code	Course Number
DPER	652

School(s)
School of Dance

Academic Level
GR - Graduate

Credit Hours

Min Credit Hours:
2

Description

This advanced class, led by Julie Bour, uses improvisational and compositional skills to guide performers in exploring movement, focusing on key dramaturgical choices such as storytelling, character development, abstraction versus realism and physicality. Students will investigate how time, space, rhythm, and symbolism intersect at the crossroads of dance and theatre, shaping dynamic performances that push the boundaries of both forms.

Students will develop their personal aesthetic, integrate kinesthetic poetry, and engage in collaborative work. Using tools like sound, speech, and objects, they will create material for structured improvisation or composition, refining technique while fostering creativity. The course promotes a playful environment where each discovery leads to new exploration.

Prerequisites:
Advanced stage performance experience.

Methodology:
Students will create a movement-based performance through weekly assignments and creative prompts. By analyzing existing works at the intersection of dance and theatre, they will identify various points of view and explore the scope of possibilities within this fusion of forms. This approach will help them define their own unique methodology for movement-based performance.

Student Learning Outcomes:
Students will expand their artistic vision and refine their personal vocabulary, mastering the ability to tell compelling stories through physical expression. They will make intentional choices to elevate their composition skills, develop a distinctive personal style, and push the boundaries of interdisciplinary performance. By the end of the course, students will create dynamic works that uniquely blend physicality and storytelling.

Course Organization/Method of Instruction:
The course will include studio practice, group discussions, interdisciplinary collaboration, and presentations, allowing students to create, refine, and showcase movement-based performances while integrating concepts from both dance and theatre.

Video-Dance, An Impossible Dance and Projection of Dance

Video-Dance, An Impossible Dance and Projection of Dance
Video-Dance, An Impossible Dance Intensive Hands-on Workshop on Screendance at CalArts by Silvina Szperling
This workshop attempts to open a door, and a channel for dialogue between practice and theories in Video-dance. Departing from perceptual development exercises, and several practices in small groups, we'll try to offer and generate particular visions that allow and encourage the development of creative and personal proposals. We'll stimulate the interdisciplinary and collaborative work, taking the Rodrigo Alonso's hypothesis "What could video-dance be, other than a casual encounter, the product of the curious bonding between one of the oldest form of expression and one of the most contemporary ones; the unsuspected result of the common ground of one medium incarnated the materiality of the with a medium de-corporized, abstract, almost inhuman?"
Participants: artists and students in Dance, Film, Theatre, Music, Visual Arts and Arts in general. Please, bring your own camera or devise with moving images recording capabilities of any kind.
Projection of Dance
Francesca Penzani Interim Week 2
A playful collaborative laboratory open to the Institute. We will work with multimedia performance, focusing on projection and processing of live video using Isadora, qlab. We will play with camera set-ups, experimenting on creating footage for performances (like the DAM exhibition) and/or working with footage generated by "Impossible Dance1" from week 1. We will also be covering some basics of live music production using Ableton and Logic Pro. The aim is to provide a space that caters to the collaborative process that will ultimately demystify multimedia-dance performance. Participants: artists and students in Dance, Film, theatre, Music, Visual Arts and Arts in general. Please, bring your own camera or devise with moving images recording capabilities of any kind.

Description

Only students from the School of Dance and the School of Film/Video are eligible to enroll.

CineDance is a production-oriented course that motivates the creative collaboration between choreographers and filmmakers. Dance and Film/Video students will work in pairs to produce two One-week Films and one Final Film project.

This course focuses on exploring the shared languages of dance and film- movement, space and time- and the compositional strategies common to both. Learning from each other's artistic processes, students will build the foundation of a movement-based filmmaking process that pushes the boundaries of dance films and narrative films, alike. Students will learn how to compose cinematic scenes that communicate stories through the movement of the bodies inside the frame, as well as the movement of the frame itself. Emphasis will be put on storyboarding movement sequences, encouraging students to indulge in composing choreographies that can only be possible on the cinematic screen.

For the production of their film projects, all

students will be expected to participate as filmmakers and performers and will develop skills and knowledge across the two disciplines.

Description
New Media in Performance introduces students to inter-disciplinary practices that combine digital media with live performance. The course will focus on the use video, projection and interactive media within performance. New Media in Performance contextualizes the integration of digital media with performance through a series of lectures examining

inter-disciplinary digital/live performances from the 1960s to today. Pieces covered in this overview will include works by Merce Cunningham, Bill T. Jones, The Wooster Group, Troika Ranch, Susan Broadhurst, Sarah Rubige and Robert Lepage. Studio activities and a group project will give students the opportunity to experiment with digital media alongside dance, theatre and performance art. The instructor will provide a variety of digital interfaces that students will use to create short works that combine digital and live performance.

Description

Dance Film Foundations provides a theoretical and practical overview of the dance and motion-picture hybrid. Through viewings, lectures, and discussion, dance students consider historical and contemporary ways of translating and capturing movement cinematically, including the manipulation of time and space, perspective, illusion, and more. Students will practice shooting, editing, and presenting movement using a variety of image capture, editing, and presentation tools - both prosumer and ubiquitous. Dance students will leave this course prepared for more effective collaborations with filmmakers, along with basic tools to create promotional materials, social media content, and films of their own.

Description

This Seminar provides an overview of dance and higher education, looking specifically at dance administration and program/curriculum design. It will give students the opportunity to design their own (original) model for a 21st century dance program in higher education. Through readings, discussion and interviews with visiting professionals in the field, the course will address issues related to design and implementation of a comprehensive dance program. Content will address the articulation of a program's vision, mission, structures and methods for implementation including: staffing, facilities, curriculum, budget, accreditation and assessment. Attention will also be given to professional organizations like NASD, Dance USA and NDEO, that provide advocacy and governance guidelines for dance programs in College and University settings as well as private studios.

Description
Taught by Shoji Yamasaki, MFA 2 in Choreography. This course introduces a concoction of bunny body language and jazz techniques that emphasize on developing body awareness with correct alignment and spatial awareness, including but not limited to body coordination, flexibility, and strength, through various locomotive movements, bunny gestures, and stylized rhythmic choreography. We will warm up and stretch for the first half of the class and will learn a combination for the second half of the class, that will accumulate for 4 weeks and change to a new song. Open to all levels. Bunny ears and tails are optional.

Description

'Pilates for Dancers: Movement Mastery & Injury Resilience' is a Pilates-based course designed specifically for dancers, with an in-depth focus on proper alignment and healthy biomechanics. This Pilates-based mat class will empower students in the CalArts School of Dance to learn how to use Pilates as a form of effective cross-training that supports the longevity and sustainability of their careers. Throughout the semester, the course will cover the "core principles" of Pilates that will help students prevent and rehabilitate from injuries, build stability and strength at all the joint spaces, increase healthy mobility, and become more efficient and intelligent dancers. This course requires students to attend class once in week in a dance studio for 1 hour and 15 minutes, as well as complete a 30-45 minute video module on the CalArts School of Dance Wellness Portal on a weekly basis. Mats and all necessary props for class will be provided for class each week.

Description

Mayurbhanj Chhau-a martial art form of Orissa, has highly evolved techniques of its own for which it differentiates itself from other forms of dance. These techniques of Mayurbhanj Chhau are based on various body movements. It is one of the rare dance forms which draws from a wide range of subjects-like-martial craft, mythology, history, daily activities, movements of the sub-human creature & imaginative themes.

It is for this reason Mayurbhanj Chhau repertoire treasures the highest number of dance items about 200 in number which is rarely found in any other dance form of the world.

The elements that the dance form highlights are:

? the complete usage of body

? very fluid usage of legs & arms

? a combination of grace & energy

? a perfect sense of body control

Description

This class is designed for individuals of all backgrounds, whether or not you have formal dance training. It focuses on using the body and voice to tell stories, express emotions, and explore physicality in new ways. Inspired by improvisational techniques from renowned Israeli dance companies like Batsheva and Vertigo, as well as immersive acting practices from "Sleep No More" (States of Tension), the course invites participants to dive into movement as a form of self-expression and creativity.

- Throughout the course, participants will:
- ? Learn how to engage different parts of the body--bones, muscles, and skin to create a variety of movement qualities
 - ? Explore different levels of eye contact and gaze to enhance presence and connection
 - ? Use the voice alongside movement to communicate emotions and ideas
 - ? Tap into imagery to guide and inspire their movements
 - ? Practice making spontaneous creative choices that reflect their personal expression.

This class is ideal for anyone interested in exploring movement, connecting mind and body, and unlocking their creative potential through physical storytelling. No dance experience is required--just a willingness to move and discover.

Description
This course is a beginner Pilates-reformer class with a focus on mindfulness, breathwork, inclusivity, dynamic stretching and strengthening. The central goal of the class is to empower students in the CalArts School of Dance to learn how to use Pilates as a form of effective cross-training that supports the longevity and sustainability of their careers. Throughout the semester the course will cover the "core principles" of Pilates that will help students breathe better, live with less pain, prevent and rehabilitate from injuries, improve posture and move more efficiently. The course does not require prior experience, and will teach students how to safely practice Pilates on Balanced Body Reformers. Over the course of the semester, students will learn Pilates reformer exercises that will help them increase strength and flexibility, improve alignment, increase coordination, and have a stronger overall awareness of their body and movement habits. In concert with the work on the reformer, students will learn additional techniques from The Franklin Method, Alexander Technique, and fascial work to add to their dancers tool-belt for muscle release, more efficient stretching, strategies for warming up and cooling down, and building their personal cross training practice.

Description
This course offers an exploration of dance traditions from West Africa and the African diaspora, examining the importance of their cultural significance, historical roots, and dynamic evolution. Students will learn foundational movements of traditional West African dance and the adaptations of these forms within diasporic communities across the globe. Through movement practice and cultural study, students will discover how these dance traditions express themes of identity, community, and resilience.

Each semester will focus on either West African or diasporic dance, with connections drawn between the two to highlight shared influences and distinct expressions. Whether engaging with traditional dances from Ghana and surrounding regions or diasporic forms across the Americas and Caribbean, students will gain insight into dance as a living archive of history and culture, embodying the spirit and stories of African and diasporic communities.

Credit Hours

Min Credit Hours:
1.5

Description

Taught from diverse cultural and professional backgrounds, ballet technique for dancers of today embodies the historic as well as current evolution of ballet technique. This class is a supportive and complementary skill set for various dance genres. It offers access to increased range of motion, refinement, control, accuracy, dynamic range - augmenting the ability to cover space, all while encouraging space for the unique needs of the individual dancer. While building strength and stamina, dancers are asked to investigate a holistic approach to ballet technique in an effort to prevent injury and inspire an ongoing conversation with the ever changing body.

School(s)
School of Dance

Academic Level
UG - Undergraduate

Credit Hours

Min Credit Hours:
2

Description

Open to Dance School Students only. This course focuses on understanding how the dancer's mind works, in an effort to become a more effect tool for any choreographer/creator. It also aims to develop a dancer's sense of self-awareness, strengths and weaknesses, and abilities for learning steps quickly, efficiently and effectively. Students must be able to execute physically demanding choreography with a sophisticated understanding of aesthetic, context and performance quality. Students will be expected to produce artifacts that visualize various lessons, read from a text, and answer direct questions.

Academic Level
UG - Undergraduate

Credit Hours

Min Credit Hours:
0.5

Description

The Conscious Dancer is a movement practice that supports a holistic, visceral, and embodied understanding of the body in motion. By exploring dance and physical action through the supplementation of a wide variety of modalities (somatic practices, anatomical concepts, imagery, evolutionary-based movement patterns, improvisation and community based experiences), students will come away with tools to uncover obstacles to physical, mental, emotional, and creative connectedness while building a personalized movement and grounding practice that supports a healthy nervous system and balanced, integrated whole. This is predominantly an activity course with intermittent discussion and reflection. While it is created with dancers in mind, it is by no means limited to only those with dance experience, and has a wide scope of application for all.

DTCH360 - Dance Pedagogy**General****Course Long Title**

Dance Pedagogy

Subject Code	Course Number
DTCH	360

School(s)
School of Dance

Academic Level
UG - Undergraduate

Credit Hours

Min Credit Hours:
1

Description

Open to BFA3 and BFA4 students. Open to BFA1 and BFA2 students by permission of instructor only. This course offers a theoretical and practical introduction to the skills necessary to teach dance technique classes. The focus of the course will be for instruction in ballet and modern/contemporary dance, while addressing additional dance forms. Material will cover

design and delivery of dance class plans, motor control and motor learning issues in dance, anatomical and psychological factors related to teaching dance, and appropriate material for various age groups and dance class settings.

Description

This course engages in the study of Hip Hop/Street dance including but not limited to breaking, social dances, popping, locking and house ranging from the 1970s to the present within African diasporic communities. Through understanding the dances' cultural identities, innovators and pioneers, students will then learn vocabulary, foundation, anatomy and behavior characteristics. Through movement practice, corresponding assignments via documentaries, readings, music, videos, and class discussions, students will develop a well rounded perspective on the ever evolving culture of Hip Hop/Street dance. As students progress through the course, their solid base will enable them to build a more developed, experimental and stylistic aesthetic in their own movement practice.

Somatic Practices With Dance

Subject Code

DTCH

Course Number

362W

School(s)

School of Dance

Academic Level

UG - Undergraduate

Credit Hours

Min Credit Hours:

0.5

Description

This course will expose students to a variety of Somatic Practices, through direct experience, discussion, and ancillary materials. In the increasingly demanding field of dance, these practices serve as a platform to support holistic growth and embodiment as both, dancers and moving, feeling, thinking human beings. Somatics also act as a road map in understanding healthy movement skills that bridge the often challenging gap between different dance forms. Subjects to be explored in this course will include; Franklin Method, Imagery for technique and performance, Qi Gong, Structural Integration, Somatic Experiencing, Feldenkrais Method, Alexander Technique, CI Training, Craniosacral therapy, Body-Mind Centering, Authentic Movement, and Continuum.

For nearly all aspiring dancers with high ambitions, it is extremely common to develop imbalanced habits of pushing beyond productivity, ironically stunting growth. The pressure and drive to achieve very specific goals often becomes too great to allow for the space to develop an internal listening process that keeps one present, authentic, and creative. Often times, burnout, injury, and even emotional distress ensue and serve as the catalyst to look for alternative routes. The incredibly expansive field of Somatic Practices has over time, become an especially popular consistency in order to effectively create or change habits.

This class will focus on building a practice from which a dancer can reconnect to their body in the present moment, building on skills of intuition, grounding, and positive movement habits. The various practices and experiences themselves will help to shed a light on understanding movement and embodiment on deep and subtle levels, with specific emphasis on the application to dance training.

UG - Undergraduate

Credit Hours**Min Credit Hours:**

0.5

Description

Contemporary Dance Lab:

Investigation of culture, aesthetics, and identity in contemporary dance.

Contemporary Dance Lab is a trans-disciplinary course that combines a rigorous creative movement practice and theoretical inquiry. This course will investigate the roles of culture, aesthetics, and identity at play within embodied movement expression. The collective cohort will reimagine intersections of the body, race, gender, sexuality, and decolonization in performance and contemporary dance. This course will interrogate hegemonic forms of movement knowledge acquisition/production, inquiry, and aesthetics.

Dance Improvisation Ensemble

Subject Code

DTCH

Course Number

372W

School(s)

School of Dance

Academic Level

UG - Undergraduate

Credit Hours**Min Credit Hours:**

0.25

Description

This course will focus on dance improvisation in performance. Emphasis will be placed on developing individual movement vocabulary, spatial and energetic awareness, and the building of new scores. Placing the binary of "freedom and form" on a spectrum, we will engage a dynamic dialogue between the internal, external, and the in-between.

DTCH375W - Dance with Inner Noise**General****Course Long Title**

Dance with Inner Noise

Subject Code

DTCH

Course Number

375W

School(s)

School of Dance

Academic Level

UG - Undergraduate

Credit Hours**Min Credit Hours:**

0.25

Description

Students will begin by learning a set dance choreography as a foundational structure. They will then experiment with this choreography through the concept of "inner noise," which can be defined as their emotions, mental states, or intuition.
